Both the Census Bureau and advocacy groups agree it will is almost impossible to count all the homeless, but they say this year's system is better than what happened in the last census. Critics contend the 1990 count, which took place over one night, was so flawed it was useless as a tool for designing programs to help the homeless.

The Census Bureau says it undercounted about 1.4 percent of the total population in 1990 and placed the number of homeless in 1990 at about 400,000.

Uganda Authorities Find at least 28 Bodies Under Home of Ex-priest

Inmates using crowbars and hoes on Tuesday unearthed another mass grave linked to a doomsday religious sect — this site hidden under the floor at the home of an excommunicated priest who was one of the cult's leaders.

Twenty-eight bodies, most apparently strangled, were pulled from the grave before nightfall forced workers to halt. Many more bodies appeared to remain buried at the site.

Scenes of carnage connected to the Movement for the Restoration of the Ten Commandments of God have followed one after another in the lush hills of southwest Uganda since mid-March. The latest findings bring the number of murders linked to the cult to at least 590.

After interviewing a nephew of Dominic Kataribabo, the former priest who is believed to have died in a fire 10 days ago, police found fresh concrete in a reception room of Kataribabo's 10-room brick-and-mortar house.

Prisoners on release from a local jail dug through the concrete and found the bodies, including those of at least three children. They pulled the corpses out of the grave with ropes.

As the bodies were being pulled up, the sound of pounding could be heard from elsewhere in the house as workers began smashing through floors in search of other graves. On Monday, authorities found the bodies of 73 unidentified men, women and children hidden in a sugar cane field at Kataribabo's compound.

Okinawa Residents Sue US and Japanese Governments of Noise

Residents of Japan's Okinawa island have filed lawsuits against the United States and Japan to fight what they say is noise pollution from Kadena Air Base.

The two lawsuits were filed Monday - one against the Japanese government on behalf of 5,544 residents seeking more than 6 billion yen ($57 million) in damages. The second suit was filed by 21 people against the U.S. government demanding an end to night flights at the base.

"The blasts at night become worse and worse," resident Tamotsu Tokeshi was quoted by Kyodo news agency as describing the sounds of the planes. "I remember how my children used to cling onto my wife's legs in fear."

Okinawa, which has less than 1 percent of Japan's landmass, is home to 75 percent of the U.S. military bases in Japan.

News Briefs Compiled by David Arnold from CNN Interactive

BRIGADE from page 1

different from their own. The Brigadistas also took time to see the city of Granada, the beach, and the United States Agency for International Develop during their stay.

The Nueva Vida camp was founded when citizens of the capital city of Managua were affected by massive flooding as a result of Hurricane Mitch in 1998. Since then, the Bucknell Brigade has visited three times. Since their first visit in 1999, the University groups have seen the residents gain electricity, limited running water, and better accommodations.

Says Katelyn Sandfort '02, "the most important thing I learned was that the Nicaraguan people are not the lazy 'will-nots' we would like to label them as ... even if these people want to succeed, there is no economy for these people to succeed within."

University Chaplain Ian Oliver says that funds are still being sought to continue the mission to Nicaragua. To date, over $24,000 have been raised for the medical clinic. However, $6000 are still needed in order to reach the goal set long ago.

The students and staff on the trip were changed in many ways. They all saw things that they will never forget.

Denise Michael '02 said, "I saw displaced, marginalized and oppressed humans. I saw poverty in its most raw form. I saw a street child eat in a manner that went beyond a ravenous animal."

Anna Tiedeman '00 added "I will never forget this experience or the people of Nueva Vida and I hope Bucknell won't ever." Erin Healy '00 said about the people of Nueva Vida, "They told us that seeing us working there gave them hope."

The Bucknell Brigade has made three trips to Nicaragua and intends to make many more. They are bringing hope to those less fortunate. However, there is still room for improvement.

"A man on the street with his arm around another man who wouldn't be able to stand without assistance," according to Laura Bond '00, "shouted at us; 'we're drunk because of the lives we live here. You don't understand, you don't get it. This isn't a Nueva Vida (New Life) this mala vida (bad life).'"

Pete needs help ... serious help.

This Week in Bucknellian Headline History

Basketball with State

March 23, 1897

The game with State was a disappointment to Bucknell whose basketball team has made such a brilliant record this season. There were several excuses for the defeat. State was on her own ground and had an advantage in working from "out of bounds," a thing that our small floor does not permit. Weymouth was missing, Mulkie was in a strange position and Bucknell's invincible triangle was not in evidence. Bucknell showed superiority in passing and in goal throwing, but good, steady team play was lacking.

The occasion was one of considerable importance at State, special trains being run from Bellefonte. The boys from Bucknell were treated in royal style. The chapters of the fraternities at State gave a reception in the young ladies' cottage; at which were present the faculty and their wives.

Smoking Penalty for BU Co-eds Cut to 4 Weeks

March 20, 1930

That the "campus" of the 44 women students who last week admitted that they had smoked in their rooms be cut from six weeks to four, "depending upon good behavior," was decided by the Women's Students Senate in a special session last Friday.

"The Senate decided, of its own volition, that, because of the largeness of the group and because it is a group matter, the case merited a little different handling," said a Senate member in an interview yesterday. It has not been the policy of the Senate to shorten its campus penalties, and it is believed this is the first time such a step has been taken.

Dean's Office Announces Suspension of Four Men for Breaking of Car Rules

March 30, 1951

Two freshmen, one sophomore, and one junior, all members of the male student body, have been suspended from the University because of the violation of the motor vehicle regulations.

"Beginning in September, 1949, no member of the Freshman, Sophomore, or Junior Classes will be permitted to have a motor vehicle at Bucknell except by special permission of the Car Permit Committee. Male members, only, of the Senior Class, in accordance with past custom and practice, may make application to operate a motor vehicle." The above regulation does not apply to commuters. The use of motorcycles is prohibited.

"All students, graduate and undergraduate, operating a motor vehicle must make application for a car permit."

Concert Committee to Host R.E.M.

April 5, 1985

R.E.M., a band whose first album Murmur came close to beating Michael Jackson's Thriller as album of the year in the 1983 Village Voice Jazz and Pop Writers poll, will be appearing at 8:30 p.m., April 25 in Davis Gym.

The Bucknell Concert Committee estimates that the cost of the R.E.M. concert will total about $20,000. The Committee will pay the band $12,000 to perform. Lighting and sound costs will amount to $3,000. Other costs include the opening act (unknown to date), physical plant fees, staffing for R.E.M. promotions and security.

Since Bucknell will be only the second stop on the band's tour, the Concert Committee feels that R.E.M.'s show will be fresh and exciting. Committee member Tricia Hammes '85 commented that R.E.M. is "the kind of band that likes playing colleges and not huge arenas. They are a college radio band."

TIAA-CREF's tax-deferred solutions can help you reach your retirement goals faster.

Call us for a free tax-savings calculator

When you're investing for retirement, the adage "never put off until tomorrow what you can do today" doesn't apply to taxes.

That's because investments that aren't eroded by taxes can add up to significantly more money for you—money you can use to supplement your pension and Social Security.

Let our consultants show you all the advantages of tax deferral, or call us for a free tax-savings calculator.

Supplemental Retirement Annuities (SRAs), IRAs and other tax-saving solutions—along with TIAA-CREF's low expenses and solid investment performance—can help you invest tax smart today so that you can reach your retirement goals faster in the years to come.

TAX DEFERRAL MAKES A DIFFERENCE

$102,068 Tax-deferred savings after taxes[1]

$67,514 After-tax savings

$100 per month for 30 years

In this hypothetical example, setting aside $100 a month in a tax-deferred investment with an 8% return in a 28% tax bracket shows better growth after 30 years than the same net amount put into a savings account.[1]

TIAA CREF Ensuring the future for those who shape it.

SENIORS: DON'T YOU WISH YOUR NAME WERE ON THIS LIST?

"We all share a collective responsibility to support educational excellence for future generations of Bucknell students." Mark Bettner, Professor of Management

"I gave to the Senior Gift Drive because of how much it benefits and ensures the future of Bucknell. I want to give others the opportunity to experience all that Bucknell has been to me." Valter Karavanic

"What we've received at Bucknell, quantitatively and otherwise, is of more value than the money spent to send us here. And beyond our graduation, our educations will be endlessly influential. The spirit of the drive is to recognize these ideals; my (small!) donation represented my agreement/appreciation for this spirit." Jess Jackley

"In life you can designate several experiences which are defining moments that completely transcend who you are. The people who I have met at Bucknell and developed relationships with have changed who I am for the better. Additionally the leadership experiences that I have had at Bucknell have prepared me for life in the real world and the senior gift drive appears to be the most appropriate way to repay Bucknell for everything that it has enabled me to do." Pete Kadens

Responsibility, recklessness don't mix

Every year, new criticisms of House Party Weekend emerge. Attempting to curb these complaints, the Interfraternity Council (IFC) issued a set of guidelines aimed to reduce the amount of infractions at fraternity functions.

Dean Baker and the Greek organizations were convinced that the weekend could be monitored internally, without the direct help of Public Safety.

With all said and done, it appears that the new specifications were successful. The Greeks believed it was necessary to show the entire campus community that they can effectively monitor this previously trouble-filled weekend, and did so with flying colors.

One problem did arise-increased violations in residence halls. The Bucknellian applauds the Greeks' efforts to take full responsibility for House Party but worries that a new trend has begun-if the fraternity is scene is too clamped down, students inevitably return to the residence halls.

It is completely irresponsible of these students, most likely underage and/or freshmen unacquainted with House Party, to act with such unruly behavior in the dorms. Their actions put a closer magnifying glass on House Party's value.

Perhaps the Greeks' message wasn't strong enough—maybe not enough freshmen and non-Greeks understood the importance of these guidelines. Many of them naturally took House Party for the free-for-all that traditional stereotypes attach to it.

If the University decides to enforce stricter regulations next year because of these increased conduct violations, those freshmen who join fraternities and sororities will have themselves to blame for an uneventful House Party.

While the Greeks worked to control their social environment, the system did see several unfortunate incidents. One house hired strippers and then lied about it to the Greek monitors, and, along with several fights, tainted what could have been an entirely successful weekend.

With the vast amount of parties taking place during House Party, it is difficult to assign blame for these incidents. One thing is clear-too many dorm residents acted improperly.

Combined with other inevitable altercations, they put a damper on the Weekend, disrespect those who worked diligently to ensure safety and efficiency, and give skeptics more ammunition against the annual celebration.

The most crucial aspect to a successful House Party is responsibility; the Greeks practiced it, so why couldn't everyone else?

bucknellian@bucknell.edu

Should students have been more involved in the presidential search?

Yes

By Rebecca Rowland

Dr. Steffen H. Rogers has been chosen to be the 15th president of the University? Really, no body informed me. I was aware that President Adams was leaving to be president at Colby College and I knew we had to pick a replacement—I just must have missed that whole selection process in between. I think someone should have told me.

Although a university president is not the primary student administrator (the Dean of Student is), he is still in charge of determining the general direction of the school. Our school. What if President-Elect Rogers decides to disband the Greek system? What if he decides to cut the anthropology major from the curriculum? The student body should have been informed of the presidential candidates' major goals and been allowed to play a larger role in the selection process.

The Presidential search committee was comprised of professors, administrators, the trustees, the student heads of BSG and other student organizations and each class president. So I concede that there were some students making choices regarding who the next president would be and, presumably, each interest was represented. But why wasn't the general student population made aware of the process?

All of the presidential search committee meetings were closed, when the candidate visited campus no students were told and the three finalist's names and qualifications weren't ever made common knowledge. Why the secrecy? It seems to me that this implies average Bucknellians are not, for lack of a better word, smart enough to pick their own leader.

I am aware of how a representative system of democracy works and yes, we all did vote for the various student organization leaders. But to continue the analogy with the US government, Joe Citizen is still allowed to vote even though the Electoral College members are the ones who really select the president. Had the student body been kept informed of the presidential search process we could have rendered an intelligent vote that, at the very least, could have been taken into consideration when the committee made their final decision.

Unfortunately, we were not given that chance. Perhaps the powers that be should have had a little more faith in their "jaded, uninvolved and apathetic" students (recognize these stereotypes?) and let them be a part of a truly important decision. No matter what our actions in the past have led people to believe, many students would have become involved in the selection had they been given the chance.

No

By Ryan Delahanty

Coinciding with the announcement of the new president, there has been a debate as to how the presidential search should have been conducted. The committee appointed to elect the successor to Bro Adams was composed mainly of trustees and faculty, along with a few students. Those opposed to this method argue that the student body as a whole should have had a more direct opportunity to talk with the candidates and they also stress that there should have been a greater effort by the administration to enlighten the Bucknell community, more so than they did.

We, as students, parents, and alumni, seemed to learn about the unfolding events that led to last week's presidential selection through small, vague articles that tried to keep the most salient information from the public. These articles would often update us to the extent that they said a few more candidates were dismissed and little else. More importantly, the only chance that the students had to speak with candidates were a one or two poorly publicized "forums." Opponents of the method used say that at the college level, it is important for the students to be involved as much as possible in choosing something as important as a president. They concede that the students that are elected officials, a part of the BSG, do indeed voice the rest of the school's concerns, but ultimately that isn't enough. All the students must be involved.

Unfortunately, having all of the student's voices heard is impossible. The faculty and trustees do know what they are doing and the members of the Bucknell Student Government try and represent us students as best as they possibly can. Although, I do agree that there should be a way that many students, if they so desire, can meet with and talk to the candidates. There really is no perfect system that can be devised to make all parties happy, but with a little more communication between the two parties, the administration and the student body, then maybe a good system can be put together. Overall, the students should be kept better informed of the happenings and workings of the university that will affect them but in an involved and very sensitive decision like this one, levels of secrecy and restraint need to be followed in order to ensure the process is conducted in a responsible manner. I am sure the candidates and current administrators appreciate the University's integrity in their search for a new president.

Letter to the Editor

Student addresses racist procedures in the New York Police Department

I am writing in response to Michael Boland's opinion piece about the death of Amadou Diallo. In Boland's piece he writes that for some unknown reason Mr. Diallo chose to reach for his wallet as the police officers approached, causing them to fire 41 times at Diallo. The question we should be asking instead of why Diallo reached for his wallet is why did the police officers approach Diallo in the first place? Was it because the officers had probable cause to think Mr. Diallo was a criminal? No. The police officers were using the stop-and-frisk techniques that have become all too common to minority residents of New York City. The NYPD regularly stop minority pedestrians without probable cause, and frisk them for weapons and drugs. This method of sifting the criminal wheat from the chaff is great for boosting police arrests statistics but is at its best an inconvenience to the majority of citizens who are not criminals. At its worst these methods can be deadly, as in the case of Mr. Diallo, when innocent people are confronted by police officers without probable cause.

If Bucknell Public Safety used these same techniques to stop hundreds of Bucknell students I am sure that they would find drugs on a couple students, but the vast majority of students would be clean. Public Safety would have infringed on the civil liberties of students in order to bust a couple of kids with drugs. This would not be fair. However at Bucknell, students do not have to deal with these types of police techniques.

The practices of the NYPD must be reformed. The police department should move away from a system that is motivated largely by arrest statistics. Instead police should focus on community based patrolling. Even though Boland reduces Jesse Jackson and Al Sharpton to, "bitter peas in a left-wing pod," many of their ideas would be beneficial to the NYPD. Specifically Sharpton advocates, that the police department must step up its recruitment of minority officers who live within the city. A large part of the problem is that the NYPD is not representative of the population of New York. Specifically in Mr. Diallo's case he was approached by four plain clothes white officers late at night in a predominantly black neighborhood. While people may not like to talk about race, I do believe we are conditioned to be afraid of people who do not look like us—especially when that person has a gun drawn. I would like to ask Mr. Boland how would he react if four plain clothes black officers approached him with guns drawn. Someone in that position might also take the "irrational" step of reaching for his wallet.

The first line of the NYPD mission statement is "To protect life and property, reduce crime, improve the quality of life while dealing with the citizens of this city with courtesy, professionalism, and respect." The NYPD would go a long way in improving community relations and most importantly saving lives by abiding by its own mission.

OPINIONS

Apology for Holocaust unnecessary

By Michael Boland

This past week Pope John Paul II toured the Holy Land, making pilgrimages to various Middle Eastern sites and addressing adoring crowds everywhere he went. His visit to Israel led many in the international media to speculate as to whether or not he would offer a formal apology to Jews worldwide for the Catholic Church's 'silence' during the Nazi Holocaust of the 1940's.

When the Pope offered no such specific apology, the American press ripped the decision, saying that it showed insensitivity to Jewish people. It has become a point of heated debate: should the Pope apologize for the actions of the Catholic Church during the Holocaust?

I say no, but let me qualify that. If the Pope were to issue an apology, I don't think it would be wrong in any way. I just think it unnecessary. One can acknowledge how horrific the Holocaust was without pinning the blame on the Church. To imply that the Church's teachings were to blame for Hitler's Final Solution is to ignore history. And to say that the Church and/or German Christians silently approved of the Holocaust is unfair and untrue.

Somewhere, some historian created the myth that Adolf Hitler was a Christian man, acting on Christian principles as he exterminated millions of Jews. That is patently false. Hitler's greatest ideological influences were, in fact, Friedrich Nietzsche (a viciously anti-Christian philosopher and critic of morality in general) and Charles Darwin. He may have labeled himself Christian, and he may have even spoken of restoring Germany as a "Christian nation", but actions speak louder than words, and the Holocaust speaks volumes about Hitler's true feelings towards Christian principles.

The most glaring example of Hitler's inconsistency was the manner in which he spoke of Jews as an inferior race, murdering them by the millions, while ignoring the fact that Jesus Christ Himself was, in fact, a Jew. The commandment, "thou shalt not kill" obviously meant nothing to him; beyond that, I'm pretty sure that he violated every single moral principle contained in the Bible during his reign of terror. Hitler was no Christian, and certainly no Catholic, and the Church cannot be responsible for the formulation of his ideology. His views and their views are entirely incompatible.

So with the Church off the hook in terms of ideology, what can be said in terms of the Church's actual, physical response to the Holocaust? Many have called it lacking, saying that the silence of the Church during this time makes them complicit in the Holocaust. I disagree. Of the 12 million killed in the Holocaust, 6-8 million were Jewish. Many of the rest were prisoners for political reasons, having dissented against the policies of the Nazi regime.

Who were these dissenters? They came from all over, but a great many of them were European Catholics who had spoken out against Hitler on moral grounds. Hitler killed not only Jews, but millions of Christians as well. He gutted the institutional German church of its conscience early and filled its leadership with hand-selected puppets. These Nazi sympathizers were the ones whose pulpits were silent during the Holocaust.

There's nothing wrong with apologies, but they're just words and they only hold real value when the apologizer is guilty of wrongdoing. In this case, the link between the Church and Holocaust is weak; the Pope, as spokesman for millions of Christians worldwide, shouldn't be forced to accept the blame for a historical event in which he, or the Church he represents, was not to blame. Instead, it would be more constructive to judge Pope John Paul II by what he has done to further relations between Christians and Jews. And his record in this regard is quite impressive. I think the hypercritical media should get off his back, and moreover, praise him for not just talking, but doing.

This is an oil crisis?

By Josh Guyan

Our reaction to the so-called oil crisis has been completely illogical. The recent political controversy over oil has been absolutely fascinating. Most of our political leaders have it all wrong. The illogical nature of our handling of this "crisis" was exemplified perfectly by Michael Boland's article in last week's *Bucknellian* entitled "Time to teach OPEC a lesson."

In that article Mr. Boland discussed the extreme crisis of gas at $1.50 per gallon and the horrible possibility of it reaching $2.00 before summer. Much of the nation shares Mr. Boland's outrage and want to have the U.S. throw its weight around to "teach OPEC a lesson".

Mr. Boland would have us exercise our right as an international bully not to protect innocent people being ethnically cleansed or to stop human rights abuses, but rather to protect what's truly in our national interest: oil. Oil, it seems, is so important that we're actually supporting government human rights abuses in throwing native people off their land in South America so that we can exploit new oil reserves.

Mr. Boland is correct in one assertion: oil is precious to us. Our entire economy is fueled by cheap oil. We can't produce enough of our economy's lifeblood (or we don't want to because of the disastrous environmental effects) and so we must import it from abroad. We, the greatest nation on earth, are completely dependent on a single commodity controlled by, as Mr. Boland calls them, "sheiks and petty Third World dictators".

You would think that we would want to become more independent, but we'd rather throw our weight around and fight wars in the Middle East to keep the price of oil down. Heaven forbid we realize what a nonrenewable resource is and that even if we don't run out of oil by 2050 like the experts predict, its exploitation has limits and we will run out eventually.

For all of its efficiency, the market economy cannot understand the concept of limits and nor see very far into the future. As long as oil is cheap the market economy will exploit it and will not develop alternatives that aren't cost-effective. By keeping oil prices down we prevent alternative energy from becoming cost-effective. Not until alternative energy is cost-effective will capitalism put its developmental abilities behind producing clean-burning, renewable energy.

What we should be doing is artificially raising the price of oil steadily over time, reaching to a point where electric and electric-gasoline hybrid cars are more profitable to produce and own. If given the right stimulus, capitalism could one day bring us hydrogen fuel whose only byproduct is water. This would break us free of our dependence on oil and those "petty Third World dictators".

Unfortunately what we are doing is pressuring OPEC to increase production and continuously subsidizing domestic oil to keep prices down. Senate majority leader Trent Lott is calling for the repeal of the federal gas tax of 18.4 cents to bring the price down. Gov. George W. Bush is attacking the Clinton-Gore gas tax (only 4 cents of the 18.4-cent total tax) and calling for the repeal of the federal tax. Never mind that Texas charges around a 20-cent tax on its gas, which Gov. Bush could much more easily repeal.

For those of you who are still worried about those high gas prices have no fear. OPEC is set to release another 1.7 million barrels a day and Mexico another 300,000. This falls short of the 2.5 million barrels the Clinton Administration was calling for but meets the 2 million a day figure that Jay Hakes, head of government's Energy Information Agency called for before a Congressional panel.

Unfortunately this will not be the big political issue the Republicans want to make of it, especially considering the measures the House took to combat the "crisis." They wanted to pass a serious bill containing revocation of foreign aid and military sales to the nations withholding oil. What they came up with was a required report on who was holding up production with no sanctions whatsoever.

Was this because of the Democrats? No, they were saying the same things I am about conservation and alternative energy. However, they couldn't get a bill with any teeth because the Republican oil interests and Congressmen from oil producing states like the high prices and want them to stay that way.

So, Mr. Boland, and those of you of like mind, you only have the Congressional Republicans to thank for your higher gas prices. As you mock the Clinton Administration for simply asking, hat-in-hand, the OPEC countries for more oil, it has worked. If you wanted tougher policies, Congressional Republicans shot them down.

New Russian President faces great expectations

By Gretchen Schrock

Any international observer who has remained informed as to the state of Russian politics in the past several years would realize that the recent election of Vladimir V. Putin does not promise the political, social or economic changes so desperately needed by this once powerful country. Putin was anointed by Boris Yeltsin and his supporters to be the next heir to the presidential throne as soon as he was named prime minister, despite the fact that the former chief of domestic intelligence for the KGB has no formal training in politics, economics or international relations. The only training he received was his on-the-job training as prime minister and acting president.

What did he do with his time in the Kremlin thus far? In order to give Russia a sense of superiority, he started a war in the Russian province of Chechyna where rebels are fighting for independence and where the Russian army is supposedly guilty of human rights violations. Somehow, instead of committing the political suicide that analysts predicted would come from this act, Putin gathered more public support. This is in deep contrast with what happened to Yeltsin— being almost defeated in the 1996 presidential election— when he decided to conduct a war in Chechyna in 1995 and which concluded disastrously for the Russian army.

What is it about this formerly unknown character of Putin that makes him so attractive to Russian citizens that they overwhelmingly vote for him (he received almost 53 percent of the votes in a field of 11 candidates)? As one Russian defense worker told the New York Times, "Why do I support Putin? Because he is the person who, at this given moment, has real power ... in the three months since our former president resigned, he has had control over all the leadership, all the military forces, all the economists."

He might have as well added that since the Putins have already settled into the Kremlin, it would be stupid to waste money making them move. In addition, Putin already met the major players of the diplomacy game (i.e. Secretary Albright and Prime Minister Blair), so why elect someone who has not and have to go through the lengthy introductions again? It all comes down to the strong Russian desire for stability at the highest level of government even if it means maintaining the status quo that has yet to improve the quality of life in this economically depressed and politically corrupt country.

Another reason for the amazing performance of Putin at the voting polls is the need for an imaginative leader to bring the country out of economic ruin. "Now the country is on the edge of collapse. Look at Chechyna. Yes, the war is cruel, our soldiers are dying, theirs too, and the civilian population is suffering. But that was a situation that couldn't continue," said Aleksei Yermelayev, a 47-year-old construction worker.

Putin's promise of a strong state is seen as a chance for Russia to hold its own among the world's leading countries. "It means not going around like some kind of beggar, begging for loans and credits that have been suffocating our country," he said, "But it doesn't mean taking up arms. It means Russia reshaping its own identity."

However, no one has a clue how Putin plans to reinvent Russia because he has yet to publicize any economic, social, or political policy. It makes one wonder why anyone would vote for a quasi-politician if he does not have programs in mind and has not publicized his stances on the country's pressing issues. "How can someone who has no program be elected president?" questioned Aleksander Dyomin, a 47-year-old plumber who voted for Grigory V. Yalinsky, the liberal democratic leader of the Yabloko Party.

One must remember that this is not a flourishing democracy but one that is barely alive, infected with corruption and weakened by the collapse of communism and the emergence of capitalism. Putin though has hinted that he might invite political rivals into the government to build political support for any programs he proposes. A Moscow factory worker told the New York Times, "He will continue the Yeltsin course: although he may make some changes."

Hopefully, Putin does make some changes to the 'Yeltsin course' because the world knows how much prosperity and fortune the Yeltsin reign brought to the Russian nation. Everyone is looking to Putin to bring stability, if not prosperity, to this ravaged country. Let us hope that he can deliver.

Much ado about the new Bison

Better food=happier students

By Maren Johnson

In case you haven't noticed—and hey, maybe you haven't—the Bison has undergone a bit of a makeover. While the design is not drastically different, the food has done a complete 180. I was skeptical at first; food in the Bison, with the exception of those delicious Bison breakfasts, has never exactly been to my liking. I didn't expect an altered facade to actually alter what was previously referred to as "food." I stand corrected.

What a difference it makes to serve food that doesn't begin with "frozen" or end in "patty." The chicken sandwiches are absolutely delightful, and the new Mexican food was an instant favorite with me. I have yet to try the Big Blue Sky Burger, the namesake of the grill, but I look forward to the opportunity. I know that I'm running the risk of sounding like a food critic, but I think it's necessary to give praise where it is due. The change in the Bison's culinary repertoire is a vast improvement and hopefully one that continues to prove successful.

Of course, there are a few minor flaws in the system so far, but one must take the good with the bad, I suppose. For instance, the "make-your-own-burger/chicken sandwich" has a bit of a bureaucratic glitch. Upon my first time ordering the grilled chicken sandwich, I naively requested a slice of cheese on it. My mistake. My request was rebuffed with a simple, "We are not allowed to put cheese on the chicken sandwiches." I will report this good behavior to the Big Brother of grilled sandwiches immediately.

Another amusing glitch I observed was watching two of the staff trying to unravel the mystery of how to correctly fold a burrito so that it does not tear in the middle. After witnessing two or three harmless tortillas be tortured, the women finally seemed to get the knack. I assure you, it was no fault on their part, maybe just a mechanical oversight. I'm sure we can get some of our talented engineers on it right away.

Finally, there is the issue of the checklist that one must now fill out at the Bison deli. While I myself am not an avid cold sandwich eater, I have overheard disgruntled consumers mention the inconvenience of having to fill out the list to obtain a sandwich.

However, as I mentioned earlier, we must take the good with the bad; and in this case I will gladly embrace the good. I find it refreshing to have new alternatives as well as some improvements on old favorites. The idea of non-frozen meat that is grilled before our eyes makes the Bison food that much more appetizing. The entire look and feel of the new Bison is fresh and inviting. While I'm sure there are some patrons who are upset by the disappearance of the toaster by the old salad bar and the switch from white cheese to orange cheese, it seems that most are satisfied with the vast improvements to our little eatery.

A tough lesson in "justice"

From the Editor's Desk

Brian Watson

Moving back to campus in January after a semester abroad was something I had been looking forward to for a long time. It was my chance to move back into my house, see my friends again, and also get to meet the new sophomores in my fraternity.

Arriving early to get settled in, the first sophomore I met was Mike McGuire. Though I already knew most of the pledges, I had never met Mike. After hanging out with him in the beginning of the semester, he struck me as being a great guy. Mike's a hard worker and a standup guy, willing to do anything for his friends and brothers.

Then last week we learned that Mike was suspended from the University for a violation many believed was unworthy of such a punishment.

He was involved in a stupid act of theft last December, a decision that he completely regrets and has been willing to make up for. Knowing he would face both University and local court charges, Mike decided to be fully cooperative. He has been in trouble before, but several of his violations are questionable, though he believes he wasn't given sufficient chance to dispute past charges.

An initial ruling by the Community Judicial Board suspended Mike for a semester. His first appeal to a different panel was overruled. His final appeal left his fate in the hands of the dean of students.

The amazing thing about Mike is the way he has handled the entire situation.

The lengthy appeals process put Mike under tons of undue stress, though he was fully cooperative through it all. Most people in his shoes would have cracked, but Mike stood tall, kept his head on his shoulders, and basically kept being the same person that so many people have come to know and appreciate.

But sometimes the worst things happen to the best people—Mike's final appeal was struck down.

Now he has to make the decision whether to pack his bags and drop the rest of this semester or to serve his suspension in the fall.

Either way, Mike was punished way too severely.

As a double major in chemical engineering and economics, he takes a specifically tailored course load that will now be thrown off by this suspension. Because of the strict requirements of his majors, Mike will have to make up for these classes later, losing a year, not just a semester.

So he makes a mistake, admits to it, apologizes, agrees to compensate for his violation and the University decides that it's not enough. Everybody needs to be a given a chance to take responsibility for their actions, but this courtesy is not being extended to Mike.

Mike never thought anything this severe would take place; neither did any of his friends. A seemingly mild offense resulted in a much harsher sentence, thanks to the University's uniform sanction policy.

Now, as a fraternity, we lose, although only for a semester, an active brother who has always stepped up and helped out whenever necessary. The campus will lose an upbeat, determined student who loves the University that cast him out.

And many of us must say goodbye to a friend, knowing that he will be back before we know it, but also realizing that justice doesn't always prevail.

Malone Web Design immediate success, creates a positive image for businesses

By Helen Shen

In a world where technology is progressing at a rapid rate and much of the population is running to catch up, some are taking full advantage of their own expertise. Ian Malone and Conrad Caplin are prime examples of businessmen who use the power of today's technology to put their skills to work, and help those who are still trying to "catch up."

Their creation, Malone Web Design, is a company that specializes in web creation and maintenance. "We help businesses harness the power of the web," announces the MWD homepage, (www.maloneweb.com), proving both the importance of the Internet in the world today, and the importance of finding talented individuals to use it to its utmost ability.

MWD found its way into the business world in August of 1998 when Ian Malone, President of MWD, was asked to design a web site for his father's law firm. Less than a year later, Malone and Caplin, Vice-President of the company and currently a sophomore here at the University, found that there was a plethora of opportunities available for MWD. "Internet is the hot thing now," said Caplin, "And it's not too hard to convince people they need web representation." "Creating web sites is an ability that is very much in demand" agreed Malone.

Not surprisingly, MWD had no problems finding its clients. Both Malone and Caplin began networking immediately. "Networking is definitely the name of the game," said Malone. "If you have connections, use them. You have to use all of your cards," said Caplin. MWD certainly benefitted from this smart theory. Their goal, to offer "customized web sites tailored to the specific needs of clients," was irresistible to many businesses in need of web representation.

How does one make a successful web site that portrays a business's identity? "The hardest part is coming up with a theme," said Caplin, but one quick glance at the MWD site proves that for the company, "coming up with a theme" has been not only successful but, beautiful. "The key is not to over-do it. An effective design communicates the right image in addition to information," said Malone.

Both Malone and Caplin take great pride in their own web site, and believe it is a good representation of the company's talent. "In many ways www.maloneweb.com is the 'show house' that makes it clear to potential clients what we're capable of," said Malone. "Our clients expect good, professional service ... and we want to give them something that is clean and sophisticated," said Caplin.

Perhaps the greatest part of starting such a successful company at such a young age is the invaluable experience it provides. "I've definitely become a bigger salesman," said Malone. "I've learned how to compose myself in a business meeting with a client." For Caplin, the skills gained are endless. "I've learned how to deal with people, how to pay special attention to detail ... it's not like turning in a paper for class—it's the real thing. You must deal with people on a completely professional level."

For those who are interested in MWD, visit www.maloneweb.com and view the various services that MWD provides; even visit MWD's portfolio page and admire the numerous web sites that the company has created for other businesses. Impressed by MWD's creations? The company is offering summer jobs for college students who "have a good eye for design" and are willing to "work long hours" and experience a whole new point of view.

"We like college students because we are college students," said Malone. "We have to deal with balancing school and MWD during the school year and then going full speed during the summer." Caplin continues, "We want a fun-working environment."

MWD's new office is located in Chevy Chase, Maryland, near Washington, DC. Anyone interested in MWD should be willing to spend the summer in the area. The new office has an indoor swimming pool and Jacuzzi, a sound system and even billiards provide a relaxed yet bright atmosphere.

"Our ideal candidate is a creative person who has graphic design abilities, technical proficiency and business acumen," MWD announces. The company offers its applicants a chance to work with leaders, create graphic designs and to implement their talents in a "team environment". Also, "a sense of humor is really important," said Malone. He also stresses the necessity of good communication skills. "This is a business of ideas and if you can't create and voice your own opinions, then you won't be successful."

Why become involved in MWD? "You learn so much ... nothing compares to doing something yourself," said Caplin. "Plus, it's an ideal job for school and the summer. It's also an opportunity to go to a new place, and help start something new." Malone believes that being young is something to take advantage of. "As young people we can walk into the boardroom of a law firm and command respect from a senior partner who may be 30 years older than us because we are young and technology is ... a young person's game."

Both Malone and Caplin have advice for those who are thinking of venturing into starting a business for themselves. Surprisingly enough, neither sees starting a new business as a risk. "I think right now one of the best things a college grad can do is start a business," states Malone. Usually a college student does not have to worry about supporting a family, small companies can become multi-billion dollar companies in a short amount of time, starting a company offers excitement and creativity, and according to Malone, being the founder of a new business can "open up doors to better careers and opportunities down the road." Caplin shares the same attitude. "Don't be afraid to try something by yourself ... test the waters." Perhaps becoming involved in MWD is the best way to try something new, to see how a young business operates and thrives.

Malone suggests that if you want to start a company, "The first thing you should do is read—read a lot. If you're serious about starting a business you owe it to yourself to learn how to do it." Both Malone and Caplin took the power of the web and utilized it to create a business that assists others in becoming more aware of technology today. They fashioned a company that is not only extremely successful, but also a clear mirror of their own capabilities. Perhaps Caplin says it best, "If you have an idea, don't be afraid to go for it. The worst you can do is fail."

Those who are interested in supplying a resume to MWD may contact Conrad Caplin at caplin@maloneweb.com or caplin@bucknell.edu.

Wink Thinks

Dear Wink,

I have always loved to travel, and try to do so at any opportunity. Because I also enjoy meeting people in other countries and helping those in need, I plan to join the Peace Corps after graduation.

Like many other Bucknell students, I have decided to go abroad. When I was first planning on going abroad I couldn't wait to leave and see the world. I saw pictures of the places that I could visit, and I truly felt like it would be a wonderful experience. Unfortunately, as the year has gone on, I have become increasingly wary of leaving.

I have been having a great time at school, and as much as I want to go, I also want to enjoy my limited time in college. To tell the truth, I am not really sure anymore if I want to go. I don't know if I am simply getting nervous as my departure date grows closer or if this feeling is some kind of sign that maybe going abroad isn't the best idea for me.

Do you think it would be wise to do something that you are unsure of? How do I decide between an experience or the lifestyle that is Bucknell?

Sincerely,
Beyond Rangoon

Jacqueline Flicker—The Bucknellian

Dear Beyond Rangoon,

I think that going abroad is definitely a unique experience, as well as a memorable one. However, going abroad has its drawbacks, such as lack of contact with friends and family. I think that weighing the pros and cons of your trip would be a good idea since it will allow you to see what is at stake.

I definitely agree that you should value the years that you have at Bucknell, because in all truthfulness, they will be gone before you know it. It would probably be a lot easier if all of your friends were going abroad as well, but you should realize that a large number of people go abroad, so the difficulties you are worried about may not be as drastic as you think.

People wouldn't continue to go abroad if they didn't have a great experience. It seems as though you are intently focused on the negative aspects of going abroad, what you will lose, how things will change, etc. But, what about the good parts? Clearly you love to travel, and this would be a trip like no other. You should really think about the ways in which leaving could change your life for the better. Your life at Bucknell will be waiting for you when you get back.

I really can't tell you whether or not your feelings are just nerves, or if they represent something else. I guess you should try and determine whether or not you have had similar feelings of apprehension prior to leaving on other trips. Also, it would probably be wise to talk things over with a member of your family - someone who knows you and who could help you try to sort things out. You could also try and talk with someone who has already gone abroad. Question them on whether or not a lot of people have apprehensions prior to leaving.

I wouldn't ignore the feelings that you are having, even though they might just be butterflies. It is always better to be safe than sorry. Either way it is an important decision that you should really think about. However, I am sure that either path you choose will be the right one for you. Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry—all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. Questions or comments can be sent to Eli Winkler at box C2815, attn: Wink Thinks.

Habitat for Humanity builds homes and a sense of community

By Catherine Crews

Originally started as a small, Christian-oriented community service group, Habitat for Humanity has grown by leaps and bounds. As well as the national headquarters in Georgia, there are numerous local chapters across the nation that make up this charitable group, including one at the University, with approximately one hundred members.

"The main goal of Habitat for Humanity is to reduce substandard housing," said Kelly Reiners, head of the University chapter. Volunteers work together to build homes for those who would not normally be able to afford a house. Jobs include everything from painting and cutting drywall to landscaping. The efforts of anyone willing to lift a hammer or even cook lunch for the workers are greatly appreciated.

Specialists in the fields of carpentry, plumbing and electrical work often donate their time to this great cause. Money for building materials and specialized labor is donated by both individuals and institutions like churches or businesses.

Any family that wishes to have a home built for them must go through a rigorous application process involving information on the family's financial situation, background checks on family members, and interviews. For obvious reasons, the applicant pool contains many families, most of whom live in substandard housing.

"Once a family has been chosen to have a home built for them, they must complete five hundred 'sweat hours' of labor to compensate," said Reiners. This means that members of the family have to work on other Habitat for Humanity homes as well as their own.

Finished homes come complete with bathrooms, closets and outdoor landscaping, just like any other new house. The family usually has to pay some portion of their income for rent. This portion depends on the family's financial status, allowing poorer families to pay less for equal housing.

Our University chapter is very active within the Habitat for Humanity organization. Within any given month, a group travels to different sites to help build homes. Most trips are for the day, but there are a few weekend outings, and each spring break members of the Bucknell chapter volunteer their time at distant sites.

Every semester, our chapter sends out a mass email to the University community, informing them about Habitat for Humanity and ways to get involved. If you wish to perform more community service, Habitat for Humanity is a great opportunity.

While the main goal is to build homes, the finished product does not just include a home. Groups such as Habitat invoke a great sense of community and fellowship. Families receiving homes and volunteers work side by side hammering, painting, and hanging drywall. Both groups work extremely hard and value each other's company and dedication. Volunteers are also left with a tremendous feeling of accomplishment and pride for what they have built.

For more information, email or call Kelly Reiners at reiners@bucknell.edu or x5279.

An abroad perspective: Cape Town, South Africa

Courtesy of Walter Czarnecki

Walter Czarnecki '01 enjoys the view at the Cape of Good Hope.

By Walter Czarnecki

Cape Town is one of the most unique cities you can find. It sits in the bowl created by Table Mountain, one of the seven natural wonders of the world. Robben Island, the prison that held Nelson Mandela for 18 of his 27 years in prison, is a short boat ride from the harbor. In addition, the Cape of Good Hope, the southwestern-most point of the African continent, is just a short drive from the city.

I approached this semester with both courage and apprehension, since I was the first Bucknellian to spend an academic semester at the University of Cape Town. The Office of International Education was a little hesitant as well. But after two days of travelling to get there, I felt ready for an experience completely different from anything I had ever done.

Everyone says that studying abroad will fundamentally change your life—my experience was no different. It was incredibly exciting and challenging to live in a Third World country that had just escaped 50 years of apartheid. The level of political and cultural sensitivity in Cape Town is tremendously high. Even though political equality has been reached (to a certain level), the vast economic disparities that remain are staggering. Everywhere I went I got the feeling that South Africa was a powder keg. South Africans are waiting (and have been waiting for some time) for an equality-based economy to follow the overturn of apartheid, and they are understandably becoming very frustrated.

Cape Town was unquestionably the most dangerous place I had ever been. I lived off-campus with nine other Americans in a house with security gates on all of the doors and an eight-foot high gate surrounding the property. During the few months spent at that house, we encountered countless homeless people asking for food at the gate, not to mention a man carrying a gun walking past the house.

The most frightening experience I had in Cape Town was when the other students and I went on a weekend home-stay in a township outside the city. Townships are the designated areas where all black South Africans were forced to live during the apartheid regime. As my Xhosa family and I were coming home from church on Sunday, I had to duck down in the backseat to avoid the gunshots that were being fired behind our car. We never learned exactly what happened, or who was shooting, but it certainly set the neighborhood into a panic that afternoon.

These are the most sensational stories from my semester, but I didn't write about them to cast the people of South Africa in a bad light. I've never met so many fascinating people with an international awareness than those in Cape Town. I was once identified as an American I was constantly asked about race relations in the United States. South Africans are forever curious about how to transform their country since it is now in such a stage of dynamic change.

Aside from studying with South Africans and learning the vast differences in culture between the Zulu, Xhosa, Afrikaans, Colored, Indian, British, and Shona peoples, I was fortunate to have the opportunity to travel all over southern Africa after the program ended. I took an overland trip with a few friends that took us through the Namib Desert in Namibia, where sandboarding and quad-biking are necessary activities, to the Okavango Delta in Botswana, and finally to Zimbabwe's Victoria Falls, the largest falls in the world.

Those who went abroad will tell you how much the experience has changed their life, but it cannot completely be understood until it is experienced. As I try and find some semblance of the adventure I had last semester here at Bucknell, it's difficult to articulate how much of an impact this trip had on my life. My future decisions and goals will all involve the new perspective I gained in Cape Town.

Local Xhosa children gather in Langa, a township of Cape Town.

Film professor offers exciting opportunities

By Brian Watson

Film courses have been sparse throughout the past few years, leaving students with few chances to study cinema. The English Department has taken great strides to improve this with the hiring of Dr. Eric Faden, the University's new film studies professor.

Faden, currently working at the University of California-Irvine, is excited about the opportunity to develop of a film studies program at Bucknell.

"When I came to visit last spring, I met a lot of people who were interested in film," Faden said. "I not only want to teach classes, but to develop a film culture at the University."

John Rickard, associate professor and chair of the English Department is equally enthusiastic about Faden's prospects. "He has a variety of experience in cinema and will provide resources for students interested in film production and history," he said.

Next fall, Faden will offer two different courses: "Film and Composition" (ENGL 101) and "History of American Cinema" (ENGL 210, currently listed as Special Topics in Film).

In his film and composition course, Faden plans to look at writing and the changes taking place. "We're really moving from a literary culture to an electronic culture," he said. "While most English offerings focus on literature, we'll look at visual culture and cinema to show how writing is changing."

Faden designed his history class for students with a general interest in learning more about cinema. He decided to focus on American cinema to give his class a solid foundation to learn about other foreign films.

"So much of what we think of cinema history revolves around American cinema, especially Hollywood, so we thought it would be the right place to start," Faden said. "But much of what we think of as 'uniquely American' cinema actually draws from many international forms of cinema."

In the spring, the new professor will offer "The Art of Film" (ENGL 299), which he called an extension of the composition class though certainly not a prerequisite. The course, focusing of film history and aesthetics, will, according to Faden, give students "a broad knowledge on film history and look at ways that cinema can grow and what alternatives are out there."

The course will aim toward introducing non-traditional forms of cinema, gradually incorporate films from various other countries, including two from Iran.

In his first seminar, Faden will offer "The French New Wave" (ENGL 399). This course will be more grounded, broken into two sections-the first will provide historical context from the late 1950's, which sparked a cinematic revolution, and then will focus on the late 1950's and 1960's and "how the New Wave left a lasting legacy."

With these opportunities awaiting him, Faden is looking forward to getting settled in Lewisburg. After working for a year at Irvine, the new professor is looking for a change of scenery.

"I've lived in big cities for most of my life," Faden said. "and I see a lot of potential at Bucknell. I've always believed that any place can be great to live in as long as you put a lot into it."

Rickard believes Faden has a great deal of potential at the University. "We wanted someone with a lot of expertise to anchor our film offerings and give them a base," Rickard said. "We hope he will pull everything together."

"I see a lot of momentum building, and think it will be great to help foster that growth," he continued. "I have a tremendous opportunity to make things happen."

An interview with the Indigo Girls . . .

By Jennie Scheerer

Courtesy of www.juliestar.tripod.com

The Indigo Girls will perform on Friday, April 8th in the University's field house. Tickets are on sale in the bookstore for $15 with BU I.D. and otherwise $20.

Hailed by some critics as "the best contemporary pop folk music of the 1990s", the Indigo Girls will be amazing the Bucknell community with their vocal talent in a little more than a week. On April 8, the duo will perform at Bucknell for the second time, as they played for a sold-out crowd here six years ago.

The Indigo Girls are Emily Saliers, vocals, acoustic, classical and electric guitar and Amy Ray, vocals and acoustic and electric guitar. Their debut album, "Strange Fire" in 1987 led to a record deal with Epic Records and the platinum album, "Indigo Girls." The duo won a Grammy for Best Contemporary Folk Recording and a nomination for Best New Artist in 1989. Their newest album, "Come on Now Social," features other popular female vocalists like Sheryl Crow and Joan Osbourne. Over the past ten years, the Indigo Girls have sold more than seven million albums worldwide - including one platinum disc, three platinum and four gold - and earned six Grammy nominations.

At the group's request, I was given the opportunity to interview Ray over the phone and she was more than willing to speak about her experiences in the Indigo Girls. Ray told me that she and Saliers attended elementary school together in Decatur, Georgia. Both members of the school chorus, the two began playing together in talent shows during high school.

Ray feels that her greatest musical inspiration is Neil Young, whom she began listening to in first grade. Her music is also influenced by topics such as activism and politics.

When I asked if Ray and Saliers ever perform separately from each other, Ray said that they played individually more when they were younger and not so much anymore. However, Ray is currently recording a solo record. "Our music is better when we both do some solo work because we each then bring in our own separate influence to the group," Ray said.

Ray enjoys touring immensely, although it can be difficult at times. "Touring is really fun but also really tiring. You don't really realize how exhausted you are until the end because you enjoy it so much while it is going on," she said. The hardest thing for Ray is being away from home from such a long time and feeling separated from what is happening there.

When Saliers and Ray love playing at colleges and are happy to be returning to Bucknell because they feel that their last experience here was definitely a positive one. The main reason that they enjoy playing for college crowds is because, according to Ray, most of their own original contacts came from people that they met through college. Ray began her college career at Vanderbilt, while Saliers attended Tulane. They both ended up transferring to Emory University in Atlanta where they began playing together at various coffeehouses, bars and other college venues. Eventually by word of mouth the Girls were being hired to play at different colleges and eventually accumulated a rather large group of fans. "We really got our following while we were in college," Ray said.

The Baltimore Waltz, written by Paula Vogel and directed by Cassandra Pisieczko, will storm Tustin Studio Theatre April 7th - 10th at 8:00pm. Tickets are only $5.

The Bucknellian staff would like to wish **Tim Scheu** a huge

Mumford and Gainer head Bucknell in London Summer 2000

By Nicole Gull

Courtesy of Marilyn Mumford

Bob Gainer of the Theatre Department and Marilyn Mumford of the English Department will combine literary and theatre study along with British history and culture.

As many of us know, the Univeristy strongly advocates study abroad and even goes so far as to provide the student body with Univeristy run programs in places like London, France, and Barbados. This summer, Professors Marilyn Mumford of the English Department and Robert Gainer of the Theatre Department will be accompanying approximately 20 students on a seven week program in London, England. The focus of the summer semester is "Mirrors of British Life: Literature and Theatre", allowing students an array of opportunities to embrace British culture.

Literary and performing arts are blended within historical and cultural context to provide the students with a healthy balance of academics and irreplaceable hands-on experience. "The remarkable thing about the program is that all the courses are site specific," Mumford said. There are many field trips and excursions in and around London in order to correspond directly to the literature and drama that the students will be studying. In addition, the students will be able to take full advantage of London's theatre district as tuition not only includes weekend trips, but also theatre tickets.

The program is open to all majors and both Mumford and Gainer proudly boast that there are almost as many majors represented as there are students on the trip this coming summer. In fact, Josh Giesey ('01) stated,"I am excited about being able to spend some time in another country and with Bucknell's summer program I am able to do that. I am a math Major who declared late and it would have been very difficult to go abroad for an entire semester."

The curriculum is designed so that the students are given the option to take two courses or just one course with the additional responsibility of an internship. The internship option adds a new perspective for students as the Univeristy will assist them in finding an internship in a field that interests them beyond their coursework. If, however, a student chooses not to work as an intern, he/she may select from English Literature to 1485: Journeys in Medieval England, Modern Brisith Drama, Seminar in the Novel, or From Page to Stage: Seminar in Drama.

The students involved in the program will live in newly renovated luxury flats in the city and attend classes within 25 mintues walking distance, near the British Museum. An additional draw that the program offers is the chance to deviate a little from an academic or extracurricular commitment on campus that may otherwise prevent a semester abroad in the fall or spring semesters. "I am unbelieveably excited for this summer. Because I swim the opportunity to go abroad is limited, so this summer is the perfect chance for me to experience what everyone talks about," Barbara Morgan ('02) said.

Professor Mumford encourages interested students to contact her as there are two remaining spots left for this summer. Also, she would like to remind those students who are thinking ahead that Jean Shackelford of the Economics Department and Patricia Wenner of the Computer Science Department will serve as the directors for the Fall 2000 semester in London and also welcome students to speak with them regarding thier program.

2nd annual Choreographers' Showcase takes place Thursday and Friday

By Elisabeth Hulette

This weekend will mark the second annual Choreographers' Showcase, a collection of dance numbers put together by Bucknell faculty and studehts as well as by commissioned choreographers. Organized by the Bucknell Department of Theater and Dance and the Bucknell Association for the Arts, this year's performance will expand on the success of last year's show.

The Showcase originated out of the growing numbers of students interested in performing for the dance department. The existing dance groups were the Bucknell Dance Company, which consists of a group of selected dancers, and the studio concerts, which give beginning dance students an opportunity to perform on stage. Both were quickly becoming overwhelmed by increasing student interest. In response, a group of dance minors created the Choreographers' Showcase, an opportunity for students of all experience levels to be in a dance production.

These three different performance groups overlap in their student composition, giving the group enough flexibility to work together on a variety of dance pieces. Tap, jazz, modern, swing, and folk dancing are among the genres that will be included in this year's show.

Funding for the show is provided by the Bucknell Association for the Arts, a group of alumni and community members who also commission Bucknell's resident choreographers. In addition to working on the Showcase, these individuals also teach dance classes at the University during their residency. One of this year's commissioned choreographers is Beth Hirschhaut-Iguchi, a jazz specialist who studied at the University of Massachusetts and now works as a freelance choreographer in Los Angeles. The other is Janelle Oltorik Wilkinson, a Bucknell graduate who currently teaches both dance and French at Princeton High School in Princeton, New Jersey. In addition, Paula Davis-Larson, the resident costume designer, choreographed a traditional Bulgarian dance for the Showcase. The number will feature costumes designed by Davis-Larson.

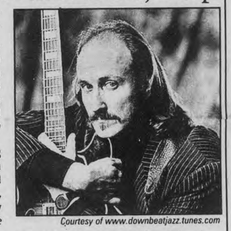
Rianna Romanowski '00, a dance minor who was largely responsible for organizing the show, contributed to the behind-the-scenes work that ranged from advertising to staging.

Danna Frangione, the faculty advisor for the Department of Theater and Dance, is supervising the show and has provided assistance to the choreographers. The production staff is comprised of family members of the choreographers as well as several volunteers. Support facilities and technology will be provided, courtesy of the Bucknell Department of Theater and Dance.

The show will be held in the Harvey Powers Theater on Thursday and Friday, March 30-31, at 8:00 p.m. Tickets will be sold at the door for $1.00.

Scofield finds success in latest album, *Bump*

By Campbell Gerrish



Courtesy of www.downbeatjazz.tunes.com

***Bump* features a variety of traditional jazz, modern funk, and experimental music that all contribute to the unique sounds found on the album**

John Scofield, renowned jazz guitarist, recently released the follow up to his incredibly popular, A Go Go, for which he teamed up with Medeski Martin and Wood. On Bump, Scofield brings back his distinctive sound and style on guitar, and the "bumping" jazzy funk that made A Go Go so popular.

Right from the get-go, the first song on the album, "Three Sisters", gets you swaying back and forth and if Barry and Levon from The State were to comment, all they'd have to say would be "Awwww yeah!". The bass kicks it, the drums are tight, and Scofield twists his laid back, smooth jams all around the song.

My personal favorite song on the album is "Kelpers". "Kelpers" is a solid funk song, with good guitar strumming, a catchy bass line and lead guitar part, and great percussion including bongos along with the drum set. They bring it from funky into this sort of mesmerizing, peaceful part, and lead you right back into the groove impeccably. Oh and yes, there is plenty of Scofield just jammin. Further along the straight forward funk side, check out "Blackout" and "Drop and Roll"

There are a few tracks which move away from the more modern funk and stick with a more traditional style of Jazz. Following "Three Sisters" is "Chichon", which despite it's electricity truly does sound like an older style of jazz. It sounds a lot like some of what you might hear on the more structured parts of Miles Davis', Bitches Brew. In the middle the band goes into a really mellow jam with light drums, soft bass, and some mysterious chorus effects from Scofield.

Also along the more swingy 50's jazz style is "Groan Man". It's up beat and catchy, something you can snap your fingers to. Choppy bass, quick drums, and some great time changes make this a great tune - especially, let's not forget, accented by Scofield's use of effects and masterful style.

A few songs that are a bit on the bizarre and experimental side are "Fez", "Kilgeffen", and "We Are Not Alone". These are certainly interesting to listen to, but are very spacey and loose sounding. If you saw the Tim Brady show at the Weis Center, a lot of these songs sound close to the ones Brady played. Not quite as wild, but similar in sound and the type of changes and effects used.

All in all I say you ought to hurry to the book store and pick up a copy of Bump. If you enjoyed A Go Go, this one will definitely be a favorite in no time. Scofield returns with yet another solid, "listen-to-all-the-way-through" album.

Roberts wins over audiences with wit and charm in *Erin Brockovich*

By Stephanie Nickse

With the latest Julia Roberts film making its debut in theatres across the country the past couple weeks, Erin Brockovich has viewers laughing. After the talked-up grand review on director Steven Soderbergh's latest film, I was surprised that I did not feel the least bit let down by all the hype. Roberts has the big hair, skimpy outfits, and sharp mouth that draws the attention of all audiences.

And that is what I observed this past Friday night. The campus theatre on Market Street in Lewisburg was a mad house. As I entered a few minutes late to the show, it was hard to find seating in the enormous theatre. The audience was anywhere between the ages of 10 and 80. However, even with the wide age gap, everyone seemed to be enjoying the new production.

Roberts plays the role of a sexy, low-

Courtesy of www.erinbrockovich.com

Brockovich, played by Roberts uses her sex appeal not only to support her children, but also to fight court cases.

er class American struggling to make ends meat and support her three children. Forcing her way into a clerkship for a law firm, she uses obvious sex appeal to fight against powerful capitalists in a water pollution case. As tension at work increases, so does the difficulty of her home life. Brockovich finds her latest lover (Aaron Eckhart) to be the next door neighbor/baby-sitter. His demands for her time do not pressure her to resign or lose hope in her struggle to uncover illegal activity that left an entire town suffering medical consequences.

Best of all, Roberts goes to trial and wins her case. As every story should end, Brockovich's boyfriend stays with her, she earns mega-dollars, and is a great mom.

Happy endings are the best, especially since the film is based on a true story.

Erin Brockovich is able to capture the hearts of her audience by being as realistic and honest as possible. Good conquers all in this romantic comedy. Julia Roberts, at the heart of the movie, does a fantastic job of playing the role of mother, businesswoman, and lover.

SCIENCE & TECHNOLOGY

"Big Dig" gouges public, lessens traffic

By Ethan Field

If you find yourself driving through downtown Boston in the near future, there is a good chance you will see pieces of what has been described as the most ambitious civil engineering project ever.

The engineering marvel going on every day, directly below the city's six-lane elevated highway, is known as the Central Artery/Tunnel project. Bostonians have chosen to simplify this technical title, and commonly refer to the project that affects their everyday lives as the "Big Dig."

After seeing the large steel frames that rise up between Boston's highways, and the massive tunneling project going on as much as 120 feet below street level, the name seems quite appropriate. While the city of Boston hopes that all the digging will eventually improve their daily travels, the project continues to devour federal and state funding well over its budget.

Traffic on elevated highways that maneuver through downtown Boston has almost tripled since they opened in 1959, leading to daily traffic jams and increased accidents. The major goal of the Big Dig project is to get rid of this congested stretch of road, and build a wider underground expressway in its place.

The city also plans to build two new bridges over the Charles River, and another tunnel beneath South Boston and Boston Harbor that will connect to Logan International Airport.

In order to reach these lofty goals, the Big Dig is financed to spend about $5 million every day of its construction. The project now has an estimated price tag of over $12 billion, well over the project cap of $10.8 billion, and growing more expensive every day. This fact, along with the fact that there seems to be no end to the project in sight, have led many people to criticize the Big Dig and question Boston's decision to attempt such a massive public works project.

Courtesy of Bigdig.com

Downtown Boston where the construction meets the river.

So what makes the Big Dig such a huge and complex project? About 13 million cubic yards of dirt will be excavated while simultaneously holding up the elevated highways that run above the construction site. The dirt will be replaced with 3.8 million yards of concrete, along with 26,000 linear feet of steel-reinforced concrete for the walls of the underground highway.

The builders are forced to deal with every day problems such as difficult soil conditions and tight working spaces, while making sure not to disrupt construction sites nearby. In general, construction must continue for a projected fourteen years while keeping Boston open for business at the same time.

While designers and engineers working on the Big Dig remain optimistic, many Bostonians have become fed up with the constant construction. The future of the project is not entirely certain, although the idea of work stopping because of excessive costs seems highly unlikely. The interesting question that remains to be seen is whether the Big Dig will eventually be labeled an engineering marvel, or simply a Big Disaster.

Computer attacks nix the net

By Rick Hoskinson

"Cyber-terrorism" is not term that one hears very often. Frequently, anyone breaking into computers is dubbed a "hacker" by media sources. Years ago, hacking was a term used by programmers writing any code. Now, hacking is thought of as breaking into any computer with malicious intent. However, hacking cannot be used to describe what is quickly becoming the most destructive form of computer misuse. Denial of Service (DoS) attacks are a new wave in what is collectively being called cyber-terrorism.

Denial of Service attacks have seen a lot of attention in the media as of late. Recently, coordinated attacks by a range of individuals have targeted major Internet companies such as Amazon.com, Yahoo, and eBay. These malicious assaults on web servers have closed down operations at several major companies, resulting in millions of dollars of lost business. The attacks wreck havoc with websites, making them inaccessible, or even crashing major systems.

There is much confusion over what these attacks do, so some explanation is in order. DoS attacks generally come in three flavors. One type exploits bugs in TCP/IP, the protocol of the Internet. Known as the Ping of Death attack, a program can generate huge data structures and send them along the Internet pipeline. These large packets can confuse or even crash a computer that receives them. There is also something known as a Teardrop attack, which breaks up data packets in such a way that the computer receiving the data will attempt to reassemble the packets in a confusing manner. The computer may then

hang or crash, not knowing how to handle the jumbled data.

A second type of attack is called a SYN attack, and it targets a shortcoming in the current specification of TCP/IP. This attack works by opening a false connection between two Internet applications. When two applications need to talk to each other over the Internet, they instigate a three-way handshake to synchronize data transfer. A SYN attack instigates the handshake but never finishes the final step. The attacker repeats this several times, until the targeted computer has multiple unresolved connections. The targeted computer then becomes confused and may crash or hang.

A final type of attack uses the brute force method of clogging Internet pathways with useless information. Often called a Smurf attack, echo packets (pings) are broadcast to network hardware in rapid succession. The return address on the packet, however, can be falsified, further adding to the bandwidth utilization. The network pathways become clogged with echo and response packets and entire sections of the Internet can be brought down.

Denial of Service attacks are relatively easy to instigate. There is a plethora of software on the Internet that can be used to clog Internet sites and services. Many of these programs are easy to find and even easier to use. I recently observed some of these programs in action, and most are easier to operate than and email client. With that kind of accessibility, a person with a limited amount of computer know-how can cause major disruptions of Internet traffic. A modern hacker does not need a superlative knowledge of computers to commit major DoS crimes.

The sudden popularity of DoS attacks is not surprising. Many companies are making gigantic profits on the Internet by hawking wares at prices that are beyond competitive. Many major e-commerce sites use strong predatory pricing and other anti-competitive business practices to force small-time companies out of the Internet sales arena. There is a lot of anger directed at these companies, and the government is still floundering on how to handle these new monopolies. Many jaded users feel the need to take the law into their own hands, as current laws and enforcement seem inadequate. Many feel that they can play Internet vigilantes, but in reality, they are nothing more than terrorists.

Terrorism seems a strong word for a crime without physical casualties, but it is completely accurate. DoS attacks are crimes against an economy, and people that have no affiliation with the Internet boom can feel the effects. Millions of dollars in transactions occur on the Internet every day, and have become an important part of America's booming economy. Some sources use the term "cyber-vandalism" to describe the recent wave of attacks, but the major coordinated strikes go far beyond simple, untargeted maliciousness.

The FBI and the federal government seem eager to help combat these problems. Right now though, there is major resistance to governmental monitoring from the computer industry. New laws could infringe on users' rights to privacy and possibly, businesses' rights to operate freely. Enforcement of Internet law is also touchy, as the FBI must contend with constantly evolving technologies, and expensive development of Internet surveillance equipment.

There are many fixes for the problems that currently exist, but immoral programmers are always releasing new DoS techniques and software. Some DoS attacks, like Smurfing, are nearly impossible to combat completely, and often can only be resolved by tracking down the perpetrators. This problem is gaining momentum, and there may be some dark days ahead for the Internet if some kind of legislation is not passed. Hopefully, the government will not take the threat of cyber-terrorism lightly, and the delinquents can be brought to justice.

Virus alert! Find out what you need to know

By Monica Montgomery

Did you recently receive an email that said "VIRUS ALERT"? Do not feel ashamed, you were one of 1,207 people on campus with a virus in their public space during the first week of scanning.

In case you have not gotten an email, Information Services & Resources (ISR) began a new service at the beginning of this semester. Each week, the public spaces of all students, faculty and staff are scanned for viruses. If a virus is located, an email is sent to that person informing them that they have one. However, ISR is not fixing any of the viruses. They are leaving it up to the individual to do so.

The process is completely automated using Norton Antivirus. At no time does any member of ISR look through the public spaces.

"We do have a huge virus problem on this campus, and anything that we can do to help is good for the users," ISR's Client Services Group Leader, Susan Hales said.

And the numbers are going down. In the first week, there were 7,510 infected files. By the third week there were only 720 people with a total of 4,473 infected files. The majority of the viruses are Microsoft Word macro viruses, with more than two thirds of those being the "Melissa Virus."

"People are paying attention. We are only trying to increase awareness," Hales said.

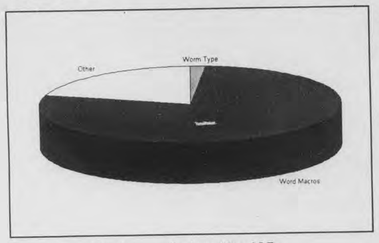
This is not something that you should ignore. "Some of these [viruses] can toast your machine," Hales said.

Viruses range from just plain annoying by displaying a message on your screen, to a program that makes your computer an overly priced paperweight. Most viruses are transmitted via email using the same method as a Trojan Horse. The program itself is not malicious, but once it is run it takes over the computer. Some viruses are called "trigger viruses," which the virus is activated to attack the computer after a certain date, the number of days since infection or a sequence of keystrokes.

The most notorious of trigger viruses was the Chernobyl virus, which attacked computers on the 26th of the month by irreversibly corrupting certain chips on the motherboard. According to anti-virus maker Symantec.com, Chernobyl is the 14th most common virus reported.

And do not think that just because you have a Macintosh, you are resistant to viruses. While there may not be as many viruses for the Macintosh as there are for Windows, there are plenty out there.

If you have received an email, it is not a laughing matter. Do something about it. Scan your public space, either from your home computer, or from a lab computer. If you have further questions, please call the TechDesk (7-7777), or visit Symantec.com or McAfee.com.



A breakdown of the viruses on Students AK and LZ

Linux advocate speaks to University students

By Matthew Trunnell

Jon "Maddog" Hall, the Executive Director of Linux International, gave a lecture entitled "Linux: the flexible operating system" last Thursday to a packed audience.

Linux is a freely distributed re-implementation of the UNIX operating system. Linux is widely deployed as a server, as the majority of Internet Service Providers worldwide depend on it.

"Linux can do a lot more than serve web pages," Hall said.

For example, the desktop computing market, dominated by Microsoft Windows, is where Linux has made the most progress recently. Lesser known are applications of Linux in small embedded systems, such as PDAs like the PalmPilot.

On the other end of the spectrum, Linux has also been configured to run on supercomputer-class machines. Relatively inexpensive PCs running Linux can be linked together to make systems that outperform nearly everything in price/performance.

"Maddog," as his students call him and as he prefers to be called, has a long history in the computer science industry. During his lecture, he shared many nostalgic stories of "the good old days" of computer science, when purchasing the second megabyte of memory for the mainframe was a major corporate decision.

The lecture was sponsored by the Bucknell chapter of the Association for Computing Machinery.

SCIENCE & TECHNOLOGY

Humans lack expected genetic diversity

By Alex Piel

When we think of the word "extinction" today, most people (hopefully) imagine an exotic plant, any of the great apes, or if they are truly educated, the entire island of Madagascar. What people do not think of, and what is growing as a specialized division of human evolution, is increasing evidence that humans once faced extinction just like the above mentioned.

Recently, ABC News reported that an international group of researchers have gathered astonishing historical evidence that humans have come so close to extinction in the past that it's surprising we're here at all.

An evolutionary biologist at the University of California at San Diego, Pascal Gagneux, and other members of a research team studied genetic variability among humans and our closest living relatives, the great apes of Africa. Hominids branched from chimpanzees between 5 and 6 million years ago.

Considering both that span of time and predicted reproductive patterns, formulas can be used to estimate expected genetic diversity within the human race. Applying these formulas to both chimpanzees and humans, makes humans appear to be mere clones of one another.

"We actually found that one single group of 55 chimpanzees in West Africa has twice the genetic variability of all humans. In other words, chimps who live in the same little group on the Ivory Coast are genetically more different from each other than you are from any human anywhere on the planet," Gagneux said.

Gagneux believes there must have been an influencing factor not yet considered by evolutionary biologists: "The family tree shows that the human branch has been pruned," Gagneux said. "Our ancestors lost much of their original variability."

Gagneux is not alone in his beliefs. "That makes perfectly good sense," the Henry R. Luce Professor of Human Origins at George Washington University and an expert on human evolution Bernard Wood said.

"The amount of genetic variation that has accumulated in humans is just nowhere near compatible with the age of the species", Wood said. "That means you've got to come up with a hypothesis for an event that wiped out the vast majority of that variation."

He goes on to say that the most realistic rationalization of this issue is that at some point in the last 5 million years, homo sapiens faced a drastic population decrease and consequently a significant loss in the genetic variability within the species. He sites plausible sources as disease, social conflicts, or environmental disasters.

Humans have come so close to extinction in the past that it's surprising we're here at all.

"The evidence would suggest that we came within a cigarette paper's thickness of becoming extinct," Wood said. Gagneux, who has studied chimpanzees in the Ivory Coast since 1990 claims the implications of such a theory are profound.

"If you have a big bag full of marbles of different colors, and you lose most of them, then you will probably end up with a small bag that won't have all the colors that you had in the big bag," Gagneux said. "Similarly, if the size of the human population was severely reduced some time in the past, or several times, the 'colors' that make up our genetic variability will also be reduced. If that is indeed what happened, then we should be more like each other, genetically speaking, than the chimps and gorillas of Africa. And that's just what this research shows."

Wood agrees and even cites human's anthropocentrism as a reason of why this possibility has never been pursued and instead has been neglected, "We all have this view in our minds that we [humans] started precariously as sort of an ape-like creature and our numbers grew continuously. We're so used to the population increasing inexorably over the past few hundred years that we think it has always been like that." Gagneux thinks that if that was the case though, the human genetic variability would—if nothing else—equal that of our closest ancestors.

Dr. Gagneux released the new evidence to this theory in the April 27 issue of Proceedings of the National Academy of Sciences. Collaborating with researchers in Germany and Switzerland, Dr. Gagneux is the first to inspect substantial groups of all four great apes in Africa. "We can do that now because new technology allows us to non-invasively take some hair, or even some fruit that these apes chew, and then we get their DNA from a couple of cells that stick to a hair or a piece of fruit they chewed."

After analyzing the DNA, the team then compared the DNA variability of apes and chimps to that of 1,070 DNA sequences collected by other researchers from random human populations worldwide. The results are astounding: "We show that these taxa [or species] have very different amounts and patterns of genetic variation, with humans being the least variable."

Somehow, though, humans have prevailed. Low genetic variability leaves humans more vulnerable to disease and birth defects. "Humans, with what little variation they have, seem to maximize their genetic diversity," said Gagneux.

Students deliver in 2nd annual web contest

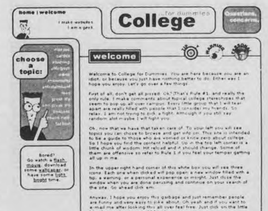
By Matthew Trunnell

The results are in. This year's Web Design Contest, sponsored by Information Services and Resources, was more competitive than ever. The contestants competed for prizes in four categories—Personal, Thematic, Academic, and Student Organizations.

In each category, a $50 gift certificate to the Bookstore was given for second place, while the first place winner had their choice of either a high-end color scanner or a copy of Dreamweaver, a web development software package.

"I believe that students graduating from Bucknell should at least have a basic understanding of [web development]," the University webmaster and overseer of the contest Roberta Sims said. "It's a way to acknowledge some of the really excellent web work some students are doing."

The contest was expanded this year to include four categories. Last year the contest was separated into two levels, Advanced and Competent. This year the categories were much more distinct.



First place winner, Chris Reif'01 with his "College for Dummies" (*www.students.bucknell.edu/reif/dummies*)

And the winners are...

In the themes category, the first-place award went to Chris Reif '01 for his "College for Dummies" site. The page highlights the vagaries of college life, with sections on everything from meeting members of the opposite sex to finances to food.

Don Shump wins first place for personal homepages

"On an average day I see about 35 to 40 completely idiotic acts of sheer stupidity at Bucknell, so I figured a web site about college would give me a great platform to share them with the rest of campus," Reif said. The page was cited as having clean navigation and "amazing content" by the judges, as well as being hilarious. Reif won the contest last year as well with his "r.crew" site.

Don Shump '00 won first place in the personal homepage category. The site has a wide variety of information about Shump and his hobbies, including a section dedicated to keeping a fish tank. Particularly memorable is the "Shumpemon" picture, a Pokemon-parody featuring the author.

"I knew the competition would be tough," said Shump. But he wanted to test his abilities since he plans for making a career out of web development. "I also felt that winning would be great to have as part of my resume," Shump said.

Are you tired of the prices in the Bookstore? You should visit the Bison Book Exchange. Triumphant in the Academic category, Ryan Wynn '01 created an online book exchange as a project in his Technical Communications class, ENGR 139. On the site, students can search for books that others have posted for sale.

"I wanted to advertise the site to students so they would start using it," Wynn said. "I figured the web contest might bring some needed attention."

Bison Chips fans should check out the new "Party in Your Pants" site, designed by Michael Brett '02. As the first place winner of the Student Organization category, the Bison Chips' page has information about all the members, a photo gallery, and a discography. Brett was also placed second in the Personal pages category with his own page.

Other notable runners-up include "Monkey Cloning at Bucknell" by Mark Deneen '01 and Phi Gamma Delta's site by James Hwang '02. Deneen's site features a humorous look at every having to with monkeys. Most popular are the several hundred pictures of different students - a different one every time you load the page - that all have an uncanny resemblance to the monkey picture inserted beside them.

This year's contest was a great success. The next contest begins around Thanksgiving this Fall with a deadline in the Spring of 2001.

More information, including links to the above sites, can be found at *http://www.bucknell.edu/web_info/webcontest.*

"Big Dig" gouges public, lessens traffic

By Ethan Field

If you find yourself driving through downtown Boston in the near future, there is a good chance you will see pieces of what has been described as the most ambitious civil engineering project ever.

The engineering marvel going on every day, directly below the city's six-lane elevated highway, is known as the Central Artery/Tunnel project. Bostonians have chosen to simplify this technical title, and commonly refer to the project that affects their everyday lives as the "Big Dig."

After seeing the large steel frames that rise up between Boston's highways, and the massive tunneling project going on as much as 120 feet below street level, the name seems quite appropriate. While the city of Boston hopes that all the digging will eventually improve their daily travels, the project continues to devour federal and state funding well over its budget.

Traffic on elevated highways that maneuver through downtown Boston has almost tripled since they opened in 1959, leading to daily traffic jams and increased accidents. The major goal of the Big Dig project is to get rid of this congested stretch of road, and build a wider underground expressway in its place.

The city also plans to build two new bridges over the Charles River, and another tunnel beneath South Boston and Boston Harbor that will connect to Logan International Airport.

In order to reach these lofty goals, the Big Dig is financed to spend about $5 million every day of its construction. The project now has an estimated price tag of over $12 billion, well over the project cap of $10.8 billion, and growing more expensive every day. This fact, along with the fact that there seems to be no end to the project in sight, have led many people to criticize the Big Dig and question Boston's decision to attempt such a massive public works project.

Courtesy of Bigdig.com

Downtown Boston where the construction meets the river.

So what makes the Big Dig such a huge and complex project? About 13 million cubic yards of dirt will be excavated while simultaneously holding up the elevated highways that run above the construction site. The dirt will be replaced with 3.8 million yards of concrete, along with 26,000 linear feet of steel-reinforced concrete for the walls of the underground highway.

The builders are forced to deal with every day problems such as difficult soil conditions and tight working spaces, while making sure not to disrupt construction sites nearby. In general, construction must continue for a projected fourteen years while keeping Boston open for business at the same time.

While designers and engineers working on the Big Dig remain optimistic, many Bostonians have become fed up with the constant construction. The future of the project is not entirely certain, although the idea of work stopping because of excessive costs seems highly unlikely. The interesting question that remains to be seen is whether the Big Dig will eventually be labeled an engineering marvel, or simply a Big Disaster.

Computer attacks nix the net

By Rick Hoskinson

"Cyber-terrorism" is not term that one hears very often. Frequently, anyone breaking into computers is dubbed a "hacker" by media sources. Years ago, hacking was a term used by programmers writing any code. Now, hacking is thought of as breaking into any computer with malicious intent. However, hacking cannot be used to describe what is quickly becoming the most destructive form of computer misuse. Denial of Service (DoS) attacks are a new wave in what is collectively being called cyber-terrorism.

Denial of Service attacks have seen a lot of attention in the media as of late. Recently, coordinated attacks by a range of individuals have targeted major Internet companies such as Amazon.com, Yahoo, and eBay. These malicious assaults on web servers have closed down operations at several major companies, resulting in millions of dollars of lost business. The attacks wreck havoc with websites, making them inaccessible, or even crashing major systems.

There is much confusion over what these attacks do, so some explanation is in order. DoS attacks generally come in three flavors. One type exploits bugs in TCP/IP, the protocol of the Internet. Known as the Ping of Death attack, a program can generate huge data structures and send them along the Internet pipeline. These large packets can confuse or even crash a computer that receives them. There is also something known as a Teardrop attack, which breaks up data packets in such a way that the computer receiving,the data will attempt to reassemble the packets in a confusing manner. The computer may then

hang or crash, not knowing how to handle the jumbled data.

A second type of attack is called a SYN attack, and it targets a shortcoming in the current specification of TCP/IP. This attack works by opening a false connection between two Internet applications. When two applications need to talk to each other over the Internet, they instigate a three-way handshake to synchronize data transfer. A SYN attack instigates the handshake but never finishes the final step. The attacker repeats this several times, until the targeted computer has multiple unresolved connections. The targeted computer then becomes confused and may crash or hang.

A final type of attack uses the brute force method of clogging Internet pathways with useless information. Often called a Smurf attack, echo packets (pings) are broadcast to network hardware in rapid succession. The return address on the packet, however, can be falsified, further adding to the bandwidth utilization. The network pathways become clogged with echo and response packets and entire sections of the Internet can be brought down.

Denial of Service attacks are relatively easy to instigate. There is a plethora of software on the Internet that can be used to clog Internet sites and services. Many of these programs are easy to find and even easier to use. I recently observed some of these programs in action, and most are easier to operate than and email client. With that kind of accessibility, a person with a limited amount of computer know-how can cause major disruptions of Internet traffic. A modern hacker does not need a superlative knowledge of computers to commit major DoS crimes.

The sudden popularity of DoS attacks is not surprising. Many companies are making gigantic profits on the Internet by hawking wares at prices that are beyond competitive. Many major e-commerce sites use strong predatory pricing and other anti-competitive business practices to force small-time companies out of the Internet sales arena. There is a lot of anger directed at these companies, and the government is still floundering on how to handle these new monopolies. Many jaded users feel the need to take the law into their own hands, as current laws and enforcement seem inadequate. Many feel that they can play Internet vigilantes, but in reality, they are nothing more than terrorists.

Terrorism seems a strong word for a crime without physical casualties, but it is completely accurate. DoS attacks are crimes against an economy, and people that have no affiliation with the Internet boom can feel the effects. Millions of dollars in transactions occur on the Internet every day, and have become an important part of America's booming economy. Some sources use the term "cyber-vandalism" to describe the recent wave of attacks, but the major coordinated strikes go far beyond simple, untargeted maliciousness.

The FBI and the federal government seem eager to help combat these problems. Right now though, there is major resistance to governmental monitoring from the computer industry. New laws could infringe on users' rights to privacy and possibly, businesses' rights to operate freely. Enforcement of Internet law is also touchy, as the FBI must contend with constantly evolving technologies, and expensive development of Internet surveillance equipment.

There are many fixes for the problems that currently exist, but immoral programmers are always releasing new DoS techniques and software. Some DoS attacks, like Smurfing, are nearly impossible to combat completely, and often can only be resolved by tracking down the perpetrators. This problem is gaining momentum, and there may be some dark days ahead for the Internet if some kind of legislation is not passed. Hopefully, the government will not take the threat of cyber-terrorism lightly, and the delinquents can be brought to justice.

Virus alert! Find out what you need to know

By Monica Montgomery

Did you recently receive an email that said "VIRUS ALERT"? Do not feel ashamed, you were one of 1,207 people on campus with a virus in their public space during the first week of scanning.

In case you have not gotten an email, Information Services & Resources (ISR) began a new service at the beginning of this semester. Each week, the public spaces of all students, faculty and staff are scanned for viruses. If a virus is located, an email is sent to that person informing them that they have one. However, ISR is not fixing any of the viruses. They are leaving it up to the individual to do so.

The process is completely automated using Norton Antivirus. At no time does any member of ISR look through the public spaces.

"We do have a huge virus problem on this campus, and anything that we can do to help is good for the users," ISR's Client Services Group Leader, Susan Hales said.

And the numbers are going down. In the first week, there were 7,510 infected files. By the third week there were only 720 people with a total of 4,473 infected files. The majority of the viruses are Microsoft Word macro viruses, with more than two thirds of those being the "Melissa Virus."

"People are paying attention. We are only trying to increase awareness," Hales said.

This is not something that you should ignore. "Some of these [viruses] can toast your machine," Hales said.

Viruses range from just plain annoying by displaying a message on your screen, to a program that makes your computer an overly priced paperweight. Most viruses are transmitted via email using the same method as a Trojan Horse. The program itself is not malicious, but once it is run it takes over the computer. Some viruses are called "trigger viruses," which the virus is activated to attack the computer after a certain date, the number of days since infection or a sequence of keystrokes.

The most notorious of trigger viruses was the Chernobyl virus, which attacked computers on the 26th of the month by irreversibly corrupting certain chips on the motherboard. According to anti-virus maker Symantec.com, Chernobyl is the 14th most common virus reported.

And do not think that just because you have a Macintosh, you are resistant to viruses. While there may not be as many viruses for the Macintosh as there are for Windows, there are plenty out there.

If you have received an email, it is not a laughing matter. Do something about it. Scan your public space, either from your home computer, or from a lab computer. If you have further questions, please call the TechDesk (7-7777), or visit Symantec.com or McAfee.com.

Linux advocate speaks to University students

By Matthew Trunnell

Jon "Maddog" Hall, the Executive Director of Linux International, gave a lecture entitled "Linux: the flexible operating system" last Thursday to a packed audience.

Linux is a freely distributed re-implementation of the UNIX operating system. Linux is widely deployed as a server, as the majority of Internet Service Providers worldwide depend on it.

"Linux can do a lot more than serve web pages," Hall said.

For example, the desktop computing market, dominated by Microsoft Windows, is where Linux has made the most progress recently. Lesser known are applications of Linux in small embedded systems, such as PDAs like the PalmPilot.

On the other end of the spectrum, Linux has also been configured to run on supercomputer-class machines. Relatively inexpensive PCs running Linux can be linked together to make systems that outperform nearly everything in price/performance.

"Maddog," as his students call him and as he prefers to be called, has a long history in the computer science industry. During his lecture, he shared many nostalgic stories of "the good old days" of computer science, when purchasing the second megabyte of memory for the mainframe was a major corporate decision.

The lecture was sponsored by the Bucknell chapter of the Association for Computing Machinery.

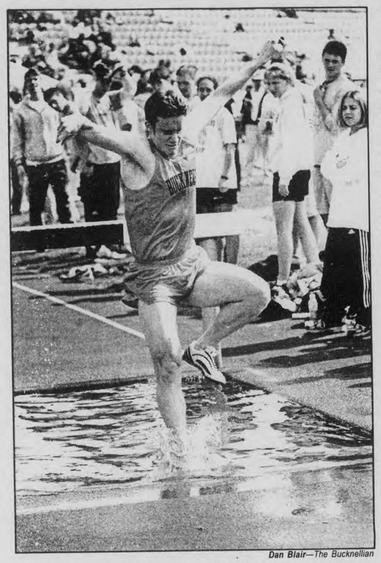
THE BUCKNELLIAN
Sports

Athlete of the Week

Kim McGrath '00, *who set a meet record in winning the triple jump and the stadium and meet records in winning the long jump at the Susquehanna Invitational.*

Track opens spring season with a bang

Jen Kirschner, Kim McGrath, Lori Allen, Andrea Nyce and women's 1600 meter relay team shatter meet records



Dan Blair—The Bucknellian

The Bison swept the first three places in the 3000 meter steeplechase at the Susquehanna Invitational, led by David Brofenbrenner '00 in first.

By Justin White

The Bucknell men's and women's outdoor track seasons swung into full gear at the Susquehanna Invitational. The teams had "home field advantage," as the meet was hosted at Christy Mathewson Memorial Stadium.

Although the meet was unscored, both the men's and women's teams proved their superiority over the 11 teams that participated.

Saturday's meet gave most athletes their first competition in five weeks, since the close of the indoor season. Head coach Art Gulden felt that the results were "very encouraging." The Bison had too much talent and depth for the other teams.

The women set numerous meet records en route to their meet domination. Sophomore Andrea Nyce eclipsed the old Invitational record mark of 9'6" in the pole vault by clearing 10'6". This not only set a meet record, but also a school record.

Jen Kirschner '00 was also a double winner, capturing the hammer and discus throws, with meet record marks of 163'11.5" and 137'1" respectively. In each event, she out-threw her nearest opponent by over ten feet. Another Bucknell thrower, Lori Allen '00, set a meet record in the shot put with a throw of 42'11".

Co-captain Kim McGrath '00 had an outstanding day, winning the long jump with a leap of 18'5.25" to capture the Stadium and Invitational records. She also set a meet record in the triple jump, (38'6"), and finished third in the 200m dash with a time of 27.29.

"I'm happy with my end to the indoor season," McGrath said. "Right now, I'm jumping my best ever. The meet was a great way to start the outdoor season. It's good to see how everyone followed their training schedule over spring break."

The Bison women also swept in the 400m dash; Steph Bango '02 won the event with a time of 57.43. The team also swept the one through five positions of the 800m race, led by Latonya McSwain '02 with a time of 2:18.98. Sara Vargo '00 captured the 100m high hurdles in 16.39. Shannon Maher '02 won the high jump by tiebreaker with a jump of 5'2".

The women also showed their might in both the 400m and 1600m relays. The 1600m relay team shattered the old meet record by over three seconds with a time of 3:56.33.

Bucknell's men's team was hard-pressed to show results as impressive as those of the women, but performed very well. The men competed exceedingly well in the middle to long distance events and in the throwing events.

Ron Hess '00 was a double winner, cruising in at 1:53.56 in the 800m race and 3:59.88 in the 1500m. The men also finished in the top four places in the 800m race and in the top six in the 1500m. The only competition in the 5000m run was between Bucknell runners Greg Costello '03 and Evan Honeyfield '02, who finished within a second of each other at 15:26.89 and 15:26.94, respectively.

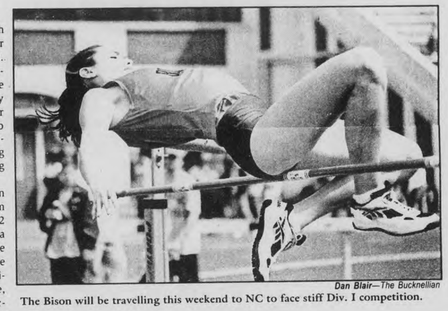
The Bison completed their long distance dominance in the 3000m steeplechase. Dave Bronfenbrenner '00 won in a time of 9:24.1, followed closely by two of his teammates.

Junior Shawn Mathews tossed 152'08" to win the men's discus competition. Fellow thrower Matt Kaplan '00 beat two of his teammates to win the hammer throw (153'2").

Next, the Bison travel to Raleigh, NC for the Colonial Relays this Friday and Saturday. This is the first major meet of the season with 15 teams, all of which are Division I. The meet features such powerhouses as University of Indiana, Penn State, Rutgers and Seton Hall.

Gulden will look to see how his teams will react under greater pressure situations. He said that at the meet his teams will get "as much competition as they can handle."

"Nothing will change [at the meet]," McGrath predicted. "We will rise to the occasion."



Dan Blair—The Bucknellian

The Bison will be travelling this weekend to NC to face stiff Div. I competition.

Mistakes and offensive struggles trip up Bison

By Andrew Bevan

In each of the last four games, the baseball team had a chance to win but the games all turned on key plays or moments that resulted in losses for the Orange and Blue.

"We have done one or two things to prevent ourselves from winning," head coach Gene Depew said.

In their first game back from spring break against Bloomsburg, the Bison jumped out to a 4-1 advantage after two innings and battled back from behind later on in the contest to win 9-6.

Junior outfielder Ian Joseph got things started for the Bison in the first, walking after taking the pitcher to a full count and then scoring later on in the inning off a wild pitch.

In the bottom half of the second, second baseman and tri-captain Tyler Prout '00 hit a two-run single that, along with another run, gave the Bison a three-run lead.

But Bloomsburg battled back, scoring four runs in the top of the fifth and adding another in the top of the sixth to take a two-run lead, 6-4. Bucknell responded in the bottom of the sixth, scoring five times to take a three-run lead that it would not relinquish.

Designated hitter and tri-captain Frank Fresconi '00 was a crucial part of the inning for the Bison, smacking a triple into right center that scored two runs.

"The triple from Frank Fresconi helped put us over the edge," Depew said.

On the mound, Chris Lackett '02 worked six and a third innings for the Bison, surrendering 17 hits while earning his second victory of the season.

Gregg Farmery '02 followed Lackett with two innings of scoreless relief and Ross Aron '02 came on in the ninth to record the last two outs and gain his second save of the season.

Prout led the offensive attack, going 3-4 with three RBI's.

"Bloomsburg was a very good hitting team and they are traditionally known for their offense. I thought I pitched pretty well because I was making the pitches I wanted but they just seemed to find the holes in the infield," Farmery said. "Luckily our hitters came through late in the game to score the runs that we needed to get the job done."

The Bison traveled to Temple for their next set of games as they faced the Owls on both Saturday and Sunday.

On Saturday, senior Scott Perry continued his strong pitching, going the distance and allowing three runs on eight hits; he struck out three while only walking one.

The Bison could not support Perry's masterful performance with much offense, getting just four hits and scoring only twice, falling 3-2.

Joseph accounted for both runs, scoring his first in the bottom half of the third inning on a sacrifice fly by Eric Fishman '02, and singling in junior first basemen Russ Lindberg in the fifth.

On Sunday, the Bison received another strong pitching performance this time from senior Ed Soley, but fell apart in the end, giving up five runs in the last inning to lose 6-4.

The Bison gradually built their lead, scoring once in both the third and fourth innings and twice in the fifth to create a three run advantage over the Owls.

But things fell apart for the Orange and Blue in the bottom half of the seventh. After Temple loaded the bases, Soley struck out one batter but surrendered a three-run double that cleared the bases.

Freshman southpaw R.J. Grant came on in relief and was welcomed by a game winning two-run home run from the Owls.

Fresconi and Prout each had two hits for Bucknell in this game and they drove in a combined three runs.

"The Temple series was extremely frustrating for us because we had a good opportunity to win both games," Depew said. "We did not give our pitchers the offensive support they needed."

"We got two quality starts from Perry and Soley. Both pitched very well, unfortunately we did not get the breaks when we needed them offensively or defensively and that proved to be crucial," Lackett said.

The Bison returned home for a doubleheader this past Tuesday against Penn State. Once again, the Bison had a chance to win both games but made some costly mistakes that prevented them from securing a victory in either game.

In the first game, the Bison tied the score at five in the bottom half of the sixth when Lindberg connected on his third home run of the season.

But the Bison committed two costly errors in the seventh that resulted in ten unearned runs for the Nittany Lions.

Ben Myers—The Bucknellian

Sean Magee '02 on the mound.

The Lions would put 15 runs on the board on nine hits in that inning, cruising to a 20-6 victory.

The second game proved to be much of the same for the Bison, as they committed four errors which led to five unearned runs for the Lions.

Penn State scored in every inning, building an 11-8 lead, until the game was called after five innings because of darkness.

Fresconi went 2-3 for the Bison and Prout had a triple as well for the Orange and Blue, who had a total of five extra-base hits.

Lackett suffered his first loss of the year in the first game and senior tri-captain Matt Potalivo suffered his third loss of the year in the second.

"We are just seeming to not get the hit we need when we need it," Depew said. "I know we can be a good baseball team because we have put it together and had success."

The Bison now turn to the most crucial part of their season as they begin Patriot League play this weekend, travelling to Easton to play a pair of doubleheaders against Lafayette.

"They will be very prepared for us," Depew said. "We need to play well to get started in the league."

Ben Myers—The Bucknellian

Tyler Prout '00, who went three for four against Bloomsburg, tagging out a runner sliding into second.

Men's lacrosse downs Lafayette 7-5

Win prepares them for faceoff with Hobart

By Mike Myers

The 20th ranked Bucknell men's lacrosse team defeated Lafayette, 7-5, on the road on Saturday, March 25.

The Bison captured the victory in the hard-fought contest by scoring three goals in the fourth quarter.

The Bison got off to a solid start when Alex Gibson '00 notched his ninth goal of the season 10:14 into the first period.

Lafayette came back with two goals of their own before Kelly Hogue '03 and Drew Pacinelli '00 each found the net, giving the Bison a 3-2 advantage.

But the Leopards were able to rally back and tie the game just before halftime.

In the second half, Dennis Geraghty '03 scored his fifth goal of the season to give the Bison a 4-3 lead going into the final quarter of play.

Keith Poisella '00 added three more goals to clinch the victory for the Bison.

"In the fourth quarter of the game, the defense shut down Lafayette, and the offense was able to take advantage of the defense's intensity to put a couple goals in," Poisella said.

> *"We need to play our best game of the year [to defeat Hobart Saturday]."*
>
> ***—Attackman Keith Poisella '00***

Bucknell will host preseason Patriot League favorite Hobart on Saturday, Apr. 1 at 1:00 p.m. "This is a crucial game for us to maintain our position in the Patriot League," Poisella said. "We need to play our best game of the year."

The Bison now have a 4-2 record on the season and are 2-0 in Patriot League competition.

Saturday's meet gave most athletes their first competition in five weeks, since the close of the indoor season. Head coach Art Gulden felt that the results were "very encouraging." The Bison had too much talent and depth for the other teams.

The women set numerous meet records en route to their meet domination. Sophomore Andrea Nyce eclipsed the old Invitational record mark of 9'6" in the pole vault by clearing 10'6". This not only set a meet record, but also a school record.

Jen Kirschner '00 was also a double winner, capturing the hammer and discus throws, with meet record marks of 163'11.5" and 137'1" respectively. In each event, she out-threw her nearest opponent by over ten feet. Another Bucknell thrower, Lori Allen '00, set a meet record in the shot put with a throw of 42'11".

Co-captain Kim McGrath '00 had an outstanding day, winning the long jump with a leap of 18'5.25" to capture the Stadium and Invitational records. She also set a meet record in the triple jump, (38'6"), and finished third in the 200m dash with a time of 27.29.

"I'm happy with my end to the indoor season," McGrath said. "Right now, I'm jumping my best ever. The meet was a great way to start the outdoor season. It's good to see how everyone followed their training schedule over spring break."

The Bison women also swept in the 400m dash; Steph Bango '02 won the event with a time of 57.43. The team also swept the one through five positions of the 800m race, led by Latonya McSwain '02 with a time of 2:18.98. Sara Vargo '00 captured the 100m high hurdles in 16.39. Shannon Maher '02 won the high jump by tiebreaker with a jump of 5'2".

The women also showed their might in both the 400m and 1600m relays. The 1600m relay team shattered the old meet record by over three seconds with a time of 3:56.33.

Bucknell's men's team was hard-pressed to show results as impressive as those of the women, but performed very well. The men competed exceedingly well in the middle to long distance events and in the throwing events.

Ron Hess '00 was a double winner, cruising in at 1:53.56 in the 800m race and 3:59.88 in the 1500m. The men also finished in the top four places in the 800m race and in the top six in the 1500m. The only competition in the 5000m run was between Bucknell runners Greg Costello '03 and Evan Honeyfield '02, who finished within a second of each other at 15:26.89 and 15:26.94, respectively.

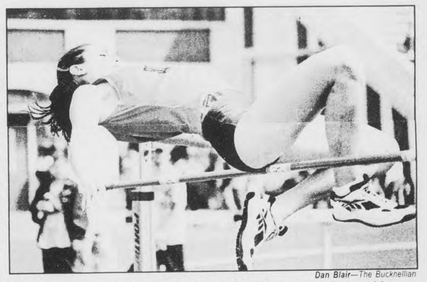
The Bison completed their long distance dominance in the 3000m steeplechase. Dave Bronfenbrenner '00 won in a time of 9:24.1, followed closely by two of his teammates.

Junior Shawn Mathews tossed 152'08" to win the men's discus competition. Fellow thrower Matt Kaplan '00 beat two of his teammates to win the hammer throw (153'2").

Next, the Bison travel to Raleigh, NC for the Colonial Relays this Friday and Saturday. This is the first major meet of the season with 15 teams, all of which are Division 1. The meet features such powerhouses as University of Indiana, Penn State, Rutgers and Seton Hall.

Gulden will look to see how his teams will react under greater pressure situations. He said that at the meet his teams will get "as much competition as they can handle."

"Nothing will change [at the meet]," McGrath predicted. "We will rise to the occasion."



Dan Blair—The Bucknellian
The Bison will be travelling this weekend to NC to face stiff Div. I competition.

Mistakes and offensive struggles trip up Bison

By Andrew Bevan

In each of the last four games, the baseball team had a chance to win but the games all turned on key plays or moments that resulted in losses for the Orange and Blue.

"We have done one or two things to prevent ourselves from winning," head coach Gene Depew said.

In their first game back from spring break against Bloomsburg, the Bison jumped out to a 4-1 advantage after two innings and battled back from behind later on in the contest to win 9-6.

Junior outfielder Ian Joseph got things started for the Bison in the first, walking after taking the pitcher to a full count and then scoring later on in the inning off a wild pitch.

In the bottom half of the second, second baseman and tri-captain Tyler Prout '00 hit a two-run single that, along with another run, gave the Bison a three-run lead.

But Bloomsburg battled back, scoring four runs in the top of the fifth and adding another in the top of the sixth to take a two-run lead, 6-4. Bucknell responded in the bottom of the sixth, scoring five times to take a three-run lead that it would not relinquish.

Designated hitter and tri-captain Frank Fresconi '00 was a crucial part of the inning for the Bison, smacking a triple into right center that scored two runs.

"The triple from Frank Fresconi helped put us over the edge," Depew said.

On the mound, Chris Lackett '02 worked six and a third innings for the Bison, surrendering 17 hits while earning his second victory of the season.

Gregg Farmery '02 followed Lackett with two innings of scoreless relief and Ross Aron '02 came on in the ninth to record the last two outs and gain his second save of the season.

Prout led the offensive attack, going 3-4 with three RBI's.

"Bloomsburg was a very good hitting team and they are traditionally known for their offense. I thought I pitched pretty well because I was making the pitches I wanted but they just seemed to find the holes in the infield," Farmery said. "Luckily our hitters came through late in the game to score the runs that we needed to get the job done."

The Bison traveled to Temple for their next set of games as they faced the Owls on both Saturday and Sunday.

On Saturday, senior Scott Perry continued his strong pitching, going the distance and allowing three runs on eight hits; he struck out three while only walking one.

The Bison could not support Perry's masterful performance with much offense, getting just four hits and scoring only twice, falling 3-2.

Joseph accounted for both runs, scoring his first in the bottom half of the third inning on a sacrifice fly by Eric Fishman '02, and singling in junior first basemen Russ Lindberg in the fifth.

On Sunday, the Bison received another strong pitching performance this time from senior Ed Soley, but fell apart in the end, giving up five runs in the last inning to lose 6-4.

The Bison gradually built their lead, scoring once in both the third and fourth innings and twice in the fifth to create a three run advantage over the Owls.

But things fell apart for the Orange and Blue in the bottom half of the seventh. After Temple loaded the bases, Soley struck out one batter but surrendered a three-run double that cleared the bases.

Freshman southpaw R.J. Grant came on in relief and was welcomed by a game winning two-run home run from the Owls.

Fresconi and Prout each had two hits for Bucknell in this game and they drove in a combined three runs.

"The Temple series was extremely frustrating for us because we had a good opportunity to win both games," Depew said. "We did not give our pitchers the offensive support they needed."

"We got two quality starts from Perry and Soley. Both pitched very well, unfortunately we did not get the breaks when we needed them offensively or defensively and that proved to be crucial," Lackett said.

The Bison returned home for a doubleheader this past Tuesday against Penn State. Once again, the Bison had a chance to win both games but made some costly mistakes that prevented them from securing a victory in either game.

In the first game, the Bison tied the score at five in the bottom half of the sixth when Lindberg connected on his third home run of the season.

But the Bison committed two costly errors in the seventh that resulted in ten unearned runs for the Nittany Lions.

Ben Myers—The Bucknellian
Sean Magee '02 on the mound.

The Lions would put 15 runs on the board on nine hits in that inning, cruising to a 20-6 victory.

The second game proved to be much of the same for the Bison, as they committed four errors which led to five unearned runs for the Lions.

Penn State scored in every inning, building an 11-8 lead, until the game was called after five innings because of darkness.

Fresconi went 2-3 for the Bison and Prout had a triple as well for the Orange and Blue, who had a total of five extra-base hits.

Lackett suffered his first loss of the year in the first game and senior tri-captain Matt Potalivo suffered his third loss of the year in the second.

"We are just seeming to not get the hit we need when we need it," Depew said. "I know we can be a good baseball team because we have put it together and had success."

The Bison now turn to the most crucial part of their season as they begin Patriot League play this weekend, travelling to Easton to play a pair of doubleheaders against Lafayette.

"They will be very prepared for us," Depew said. "We need to play well to get started in the league."

Ben Myers—The Bucknellian
Tyler Prout '00, who went three for four against Bloomsburg, tagging out a runner sliding into second.

Men's lacrosse downs Lafayette 7-5

Win prepares them for faceoff with Hobart

By Mike Myers

The 20th ranked Bucknell men's lacrosse team defeated Lafayette, 7-5, on the road on Saturday, March 25.

The Bison captured the victory in the hard-fought contest by scoring three goals in the fourth quarter.

The Bison got off to a solid start when Alex Gibson '00 notched his ninth goal of the season 10:14 into the first period.

Lafayette came back with two goals of their own before Kelly Hogue '03 and Drew Pacinelli '00 each found the net, giving the Bison a 3-2 advantage.

But the Leopards were able to rally back and tie the game just before halftime.

In the second half, Dennis Geraghty '03 scored his fifth goal of the season to give the Bison a 4-3 lead going into the final quarter of play.

Keith Poisella '00 added three more goals to clinch the victory for the Bison.

"In the fourth quarter of the game, the defense shut down Lafayette, and the offense was able to take advantage of the defense's intensity to put a couple goals in," Poisella said.

> *"We need to play our best game of the year [to defeat Hobart Saturday]."*
> —*Attackman Keith Poisella '00*

Bucknell will host preseason Patriot League favorite Hobart on Saturday, Apr. 1 at 1:00 p.m. "This is a crucial game for us to maintain our position in the Patriot League," Poisella said. "We need to play our best game of the year."

The Bison now have a 4-2 record on the season and are 2-0 in Patriot League competition.

Summer Session 2000

NORTHWESTERN UNIVERSITY

Northwestern University offers a summer educational experience tailored to your needs. With our extensive course offerings, you will find hundreds of ways to catch up, get ahead, or pursue new interests.

- More than 300 courses in 44 departments
- Small, interactive day and evening classes on our lakefront campuses in Evanston and Chicago
- A year's worth of biology, chemistry, physics, or foreign languages earned in one summer
- Courses that range from one to eight weeks in length

- **Summer Study Abroad** combines classroom learning with lectures and visits to culturally significant sites in three foreign cities: Arles, France; Bangkok, Thailand; and Verona, Italy
- **Summer Field Studies** supplement classroom learning and allow you to expand your skills at numerous locations in the United States.

Summer Session has the flexibility to suit your schedule. Classes begin Monday, June 19, and continue through Friday, August 11.

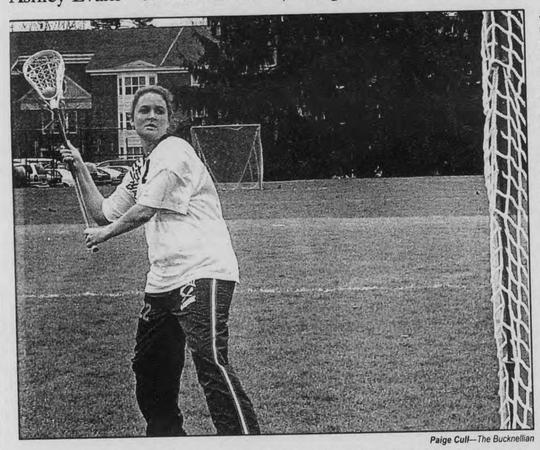
Newest Bison star has filled some big shoes

Ashley Evans '01 has stabilized, energized the lax offense after the graduation of Heidi Hammes '99



Paige Cull—The Bucknellian

Evans has netted 18 goals and registered six assists in just the first seven games of the spring season.

By Carmen Mauriello

With the graduation of the team's all-time leading point scorer, Heidi Hammes '99, women's lacrosse coach Barb Jordan asked junior attacker Ashley Evans to step up and take control of the offense this season.

And she has—in a big way.

Evans has scored 18 goals and registered six assists in just the first seven games of the squad's spring season, providing stability for a young Bison attack.

In addition to her increasing contributions on the field from year to year, Evans has brought intangibles that have helped to unite the team off of the field. "She always contributed so much in terms of work ethic, humor and a sense of keeping the team together," Jordan said.

After graduating from one of the nation's premier high school lacrosse programs, Severna Park High School, Evans was thrust into the Bison rotation as a freshman. "It was a tough transition [to college lacrosse] because I felt the girls on our team were such strong players," Evans said. "It took time but I was able to adjust, and I gained valuable playing experience as a freshman."

Evans finished the year fifth in total points (12 goals, five assists) on a Bison team that recorded a 10-5 overall record-giving the squad back-to-back winning seasons for the first time in its history. Her pinpoint passing skills, excellent field vision and versatility began to open some eyes around the league.

Hammes saw Evans' potential and took the young star "under her wing." "She often stayed after practice with me and taught me a lot about playing college-level lacrosse," Evans said of Hammes.

The 1999 Bison displayed a great deal of promise with the return of seven seniors, including pre-season All-Americans Hammes and Liz Murphy '00. But after a series of narrow defeats to Patriot League foes, the Bison faltered to a 5-8 record.

But Evans, who saw increased playing time as a sophomore and upped her production to 16 goals and six assists, stated that the season "was not a disappointment." She was proud that the unit stayed together and maintained its spirit despite some unfortunate losses.

With the departure of Hammes and Murphy, Evans was Bucknell's leading returning scorer heading into this year's spring season. But Evans knew that it was going to take a team effort to replace the production of Hammes and Murphy.

"I felt like I wasn't the young one anymore and had to step up and show more leadership," Evans said. "But I knew the offense was very talented and would definitely not be all me."

After the Bison's offense struggled on a spring break trip against some of the nation's premier teams, the unit began to gel under Evans' leadership against Stanford, a game in which Evans' six goals propelled the Bison to a key 10-9 victory. The offense followed that with scoring outputs of 10 and 13 goals against Villanova and St. Joseph's, respectively.

One of the Bison's offensive weapons that Evans pointed to was Suzanne Rafaele '03. Raffaele, who already has 12 goals and two assists this season, came in this year as a freshman with Evans being a junior, just as Evans did under Hammes. And already Raffaele sees Evans as a mentor who has eased her transition into Division I lacrosse and helped strengthen her game.

"[Evans] is the kind of player I dreamed about playing with in high school," Raffaele said. "She takes control behind the net with amazing stick work and her passes are always right on my stick."

Evans' timely sense of humor was something that her coach and teammates pointed to as a great stabilizer for the team. "She comes out with some things at really critical points-where you're going to either laugh or cry—and you end up laughing," Jordan said. "She keeps things in perspective."

Evans admitted to being a jokester, emphasizing that team unity and friendship are her highest priorities. "We're such good friends and it's such a comfortable atmosphere that [making jokes] helps us relax and get along on and off the field," Evans said.

Evans is a business management major who is interested in possibly pursuing marketing or advertising after graduation.

Her main goal on the lacrosse field is to lead the 2-4 Bison to a winning season. "We want to push ourselves to achieve everything that we're capable of, building and getting better with each game and each season," Evans said.

Lax gets a dose of its own medicine

By Chuck Vicente

Some days a single goal can separate a win from a loss, as shown in the Bucknell's 10-9 win over Stanford on Mar. 20. But just a week later, it was the Bison's turn to fall by a single score. This past Saturday the Bucknell women's lacrosse team suffered its first Patriot League loss against Villanova, 11-10.

The score was close throughout the entire 60 minutes of play with neither team pulling ahead by more than two goals. Head coach Barb Jordan blamed the loss on the Bison's poor first half and bad decision making with the ball.

"We played a strong second half, but in the first half we were slow," Jordan said. Villanova started out with strong pressure, which controlled the tempo of the first 30 minutes. The Wildcats also won twice as many draws as Bucknell.

Tight calls by the referees also forced the Bison to adjust their defense. Instead of playing for the ball, they were forced to focus on getting good body position. "It was very hard for the defense to adjust [to the refereeing]," said Nicole Kallis '03, who started in goal in place of the injured Annie Richards '01.

On the offensive end, Ashley Evans '01, who leads Bucknell with 14 goals on the season, led the Bison with three goals. Jen Holiday '01 tallied a goal while Suzanne Raffaele '03, Krista Gerhard '00 and Melissa Montefusco '02 each netted two goals.

Kallis finished with a save percentage of .476% on the day and moved her season average to an impressive .547%. "I get nervous at times, but I am comfortable once the game starts," Kallis said.

The Bison dropped St. Joseph's this past Tuesday, 13-6, behind Evans' four goals. This Saturday the Orange and Blue have a tough Patriot League game against Holy Cross. Holy Cross's program is young but talented, and it should be a strong matchup for the Bison.

Once Bucknell can establish consistent play and put an entire 60 minutes together, Jordan does not have any doubt that they will be an extremely solid and dangerous team.

Mudsharks overcome injuries to preserve "passion for the game"

By Adam Feldman

"Another one bites the dust, another one down, another one bites the dust." A team singing a victory song? Think again! After an extremely successful opening tournament, the Bucknell ultimate Frisbee team, the MudSharks, have had an unlucky swing of events.

The 'Sharks entered their second tournament, at Lehigh University, with high hopes of upsetting the top teams. Unfortunately, it wasn't long before disaster struck.

After the 'Sharks jumped to a quick 3-1 lead, captain Adam Feldman '01 dove in front of a player to knock down the disc and prevent a score. This may have been the captain's last dive of the season. He broke both bones in his left arm and had surgery after being carried off the field in an ambulance.

This tragedy obviously shell-shocked the team. The next few games, the 'Sharks began to adjust without their captain and emotional leader, losing some key games.

Looking at their record alone, the tournament appeared to be a disaster for the 'Sharks, but this was not the case. In the final game of the first day, the 'Sharks finally appeared to overcome the mental distraction of losing their captain. They were playing Navy and down 8-5, with all hopes of winning nearly dismissed. The veterans decided to use the rest of the game as a learning experience for the freshman and sophomores. Little did they know that "quit" was not in their vocabulary.

Carried by the stellar play of freshmen Marc Breon and Brian Lowe, the 'Sharks showed Navy that heart can carry you a long way. The freshman and sophomore 'Sharks carried the team to a 13-10 victory.

This momentum carried into Sunday's play. The 'Sharks were matched up against Cornell, the best team in the region. Compared to Cornell's talent, the 'Sharks didn't stand a chance.

However, the 'Sharks' passion and desire to play prevented Cornell from walking away with an easy victory. Though the 'Sharks eventually lost the game, their inspirational play brought a tear to the bed-ridden captain's eyes.

Another one bites the dust.

Only a few short days later, one of the 'Sharks young prospects, Pete White '02, broke his humerus bone while skying for a disc in the end-zone. At 6' 7", White was the 'Sharks tallest player and was improving quickly. Not only did the 'Sharks lose the height advantage, but also more importantly they lost the constant smile that loomed on White's face at practice and tournaments.

Another one bites the dust.

Tim Scheu '01 is the latest 'Shark to be kept from playing. However, this time it was not a frisbee accident. Scheu became ill on his spring break trip to London and has not been able to return to play.

The team is optimistic that he will eventually be able to play again; they just wish he was with the team now, since Scheu is one of the 'Sharks best players. He has the ability to dominate games defensively and offensively and his play on the field will obviously be missed.

The passion lives on. The 'Sharks next test came this past weekend here at Bucknell, as they hosted a tournament composed of seven teams.

The overall tournament was a success, but one specific game exemplified the 'Sharks style of play and love of the game—contest number two against a talented Penn State team.

The 'Sharks nearly played the entire game with only freshman and sophomores. At one point, Feldman turned to Matt Ferenc '02, a first year player, and asked him to handle a position typically reserved for the veteran players. Ferenc's eyes lit up in excitement—the passion obviously lives within him.

Unfortunately, the 'Sharks had some poorly timed drops and this led to a 7-2 half-time lead for PSU. Overall, the 'Sharks played extremely well despite the score.

In the second half, some passionate play and organized leadership by Justin White '02 inspired the team's comeback. White, typically a quite, reserved player, has finally realized his role as a leader of the 'Sharks. The 'Sharks made a valiant effort to defeat PSU, but unfortunately came up short and eventually lost 13-9.

After the day was over the 'Sharks were 3-1 and young superstar Ken Taga '02 returned home and passed out from pure exhaustion at 8:00 p.m., sleeping through all the Housepary festivities.)

Though the 'Sharks are beat up, they continue to work hard at practice and will obviously not be playing with anything less then 110 percent.

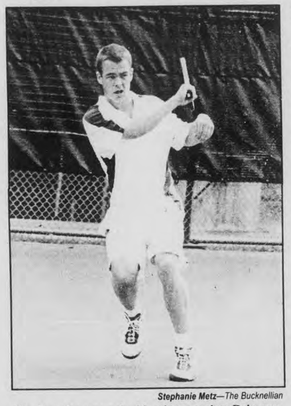
Men's tennis splits matches against F&M and Delaware



Stephanie Metz—The Bucknellian

Alex Davydov was a double-winner against Delaware.

By Mike Brophy

Coming off of a grueling spring break week in which it competed in five matches, the Bucknell men's tennis team continued its season with two home matches this past week.

Facing off against Franklin & Marshall and Delaware, the Bison had an up and down week, defeating F & M, 6-1, but losing to Delaware, 4-3.

Last Thursday, Bucknell played F & M and truly illustrated the potential that it has to offer. The Bison won five of the six singles matches, including a three set, come from behind victory by number one player Aaron Webster '01 (2-6, 6-3, 6-1). Bucknell also swept all three doubles matches.

With another victory under their belt, and a season record of 3-5, the Bison hosted Delaware this past Saturday. While most of us were enjoying the house party festivities, the Bison were working hard to fend off the distractions and compete.

The Bison dropped a tough 4-3 decision, but several Bucknell players shined at the end of the day. Alex Davydov '02 claimed victories in both his singles and doubles matches, while Todd Jacobs '03 won his match (6-0, 6-0) at the fifth position.

Coach Bob Hammerlee was happy with the performance of these two Bison and their ability to come through for the team.

"We played well, but I would like to have taken back Saturday's match," Hammerlee said of his team's performance over the week.

The Bison's coach was optimistic that senior captain T.K. Kelly will be returning to the starting lineup this week.

Coming off of an hand injury, Hammerlee said Kelly has already helped the morale of the team; even though Kelly is not 100 percent, he will definitely bolster the team's performance.

Kelly's first match back and Bucknell's next match will be against St. Joseph's College this Friday in Philadelphia.

Crew excels at Bucknell Invitational

By Jennifer Ciotta

This past Saturday and Sunday the Bucknell women's crew team dominated its field of 20 competitors at the Bucknell Spring Invitational. Being the largest Bucknell Spring Invitational ever, the women's successes are a forecast of what is to come for this season. The men's team also registered a strong showing, winning two bronzes.

On Saturday Sarah Diegnan '00 (lightweight women's captain) and Keri Heuberger '02 captured the gold medal in the varsity women's pair event. They beat Penn State and Susquehanna with open water between themselves and their nearest competitors.

The varsity women's four had to wait until Sunday to race in its final due to inclement weather conditions. This four, comprised of Elizabeth Barrows '00, Kelly Wanger '00, open women's captain Annie Calcagni '00 and Julie Engel '03, also captured a gold medal. Coxed by Linda Voll '03, the Bison beat the University of Pittsburgh by eight seconds. The third-place finisher was Mercyhurst while the fourth competitor, Fordham, pulled out of the race.

The men's crew also had a strong showing. In the varsity four event, the crew of Scott Uebile '00, Shaun McBride '00, Scott Ortland '01 and Jeremy Urban '02 captured the bronze medal. Another bronze medalist was the novice A boat of freshmen John Waterman, Jeff Dasch, Jeff Bolle, Aaron Casagrande, Mike Brooks-Williams, Mike Andrieu, GM Bell, Aaron Bates and John Purcell. It was the third straight top-three finish for the novice A-boat. The crew's next challenge will be this upcoming weekend at the Occoquan Sprints in Fairfax, Virginia.

Red Light Special dominates women's division

By Laurie Purse

Our team is made up of all freshman soccer players and one freshman golfer. We call ourselves The Red Light Special because everyone stops to look at our skills! We went undefeated this season-smashing each opponent.

The volleyball players were our toughest competition, but due to our intensity and killer instinct, we came out on top. Each contest was brutal-especially the game versus the women's rugby team; we were practically tackling each other trying to get the rebounds. Most people don't think that girls play rough, but The Red Light Special is all about it!

The players are freshmen Laurie Purse, Emily Keber, Tara Uetchel, Melissa Lawson, Lauren Schwarz, Caralyn Desautel, Kelly Irvin, Erin Bower and Molly Campbell (The lone golfer).

We were victorious in the championship game, 20-8. Each person played with great intensity, and we controlled the game the entire time.

Fourth concussion may shelf Lindros forever

By Kevin Logan

With the Flyers occupying the fourth spot in the Eastern Conference and only two points away from jumping straight into first alongside the New Jersey Devils, they suddenly found themselves with a new obstacle to face. They must play without No. 88 Eric Lindros for at least the next four to six weeks—and perhaps forever.

It's all because now-dethroned captain Lindros suffered the fourth concussion of his NHL career on Mar. 4th against the Bruins. Doctors determined that the injury-prone Lindros had a grade II concussion, which may include memory loss.

There are serious concerns about the consequences of his suffering another—especially after watching his brother Brett's forced retirement from the Islanders after his third concussion (and several in the minors). It may very well mean the end of No. 88's career.

Knowing this, the Flyers couldn't just sit back and wait for a return that might never be, especially amidst the tight playoff races in the East. So they took action and named veteran defenseman Eric Desjardins as the new team captain. The move has strengthened many people's suspicions that Lindros—a restricted free agent at the end of the season—will not be returning, at least not to the Flyers (that is, if he is cleared to play hockey again). The rumors began because of the turmoil created when Lindros criticized his team's training staff for not taking him off the ice earlier and diagnosing him correctly.

With Lindros out, the Flyers will have to step up under Desjardin's direction in their remaining seven games to catch the slumping Devils. Sunday's win against Pittsburgh put them within one win's reach of New Jersey.

The Penguins struck first on a Rob Brown goal in the second period, but Philly answered with two consecutive goals by Craig Berube and Keith Primeau, and Mark Recchi got an empty-netter in the third to seal the victory. During the first period of the matchup, the Pens' Jaromir Jagr suffered a back injury that ignited a brawl in the closing seconds of the period. Jagr is listed as day-to-day.

Oilers Too Slick for Sharks

As in the East, the battle for the final few playoff positions in the Western Conference is still too close to call. San Jose and Edmonton, two of the teams toeing the playoff line, faced off Monday in the first of their last two head-to-head matchups of the regular season. The game was immensely important for both teams, who each went in with 80 points.

San Jose got off to a quick start on a goal by Todd Harvey just 90 seconds into the first period. Harvey found a rebound from Jeff Friesen and one-timed it past Edmonton goalie Tommy Salo. The lead held until the third period, when right wing Alex Selivanov got his own rebound and slid one along the ice that beat San Jose goaltender Steve Shields. Six minutes later, Ethan Moreau notched his 17th goal on another rebound—this time from a shot by Todd Merchant—which he backhanded top-shelf.

Tommy Salo stood strong in net for the Oilers, making several key stops in the final period to preserve his team's lead. With seven minutes left, he beat Vincent Damphousse on a backhander and then made a sprawling stick save to rob Patrick Marleau of what could have been the game-tying goal.

The victory bumped the Oilers into the sixth spot with a two-point edge over the Sharks. The two teams will meet again on Monday in what could ultimately determine who will be in the playoffs.

Notes from around the league:

—In a move that somewhat resembled the Devils' sudden firing of head coach Robbie Ftorek, Madison Square Garden President Dave Checketts abruptly dismissed New York Rangers long-time president and GM Neil Smith and coach John Muckler on Tuesday. The move was spurred by the fact that the Rangers, despite having the highest payroll in NHL history (upwards of $61 million), are likely to miss the playoffs again.

NBA Experts' Picks

By Ali Ahmed and Justin McCarthy

Raptors at Hornets

Vince Carter now has another reason to be compared to Jordan. As was the case in Jordan's day, the hype surrounding him has gotten so high that opponents are overlooking how much his teammates are contributing to the success of the Raptors. Carter has been playing unbelievable this year but his teammates deserve more credit than they get. Oakley and Davis especially have showed up the frontcourt and given leadership. McGrady has been playing huge during the Raptors recent run. The Hornets also have a well-balanced team, getting contributions from Jones, Campbell, Coleman and Mason. However, the Raptors' frontcourt should shut down Coleman and Mason, making Jones carry the load.

Ali's Pick: Raptors by seven

This game will come down to which team's all-star has a better game. In two previous meetings-in which the teams have both split-Jones and Carter have each been their respective team's leading scorers. Also, defense will play a major role in this game, for the winning team in each previous game shot over 50 percent. The starters for Charlotte need to have a good game, since their bench has nearly been non-existent recently. However, Toronto relies heavily upon its bench, and its bench has played a major part in both previous games against Charlotte. Expect Carter to have a huge game, since no forward on Charlotte is quick enough to guard him. Toronto may have quickness in the frontcourt, but Charlotte has the size to out rebound them.

Justin's pick: Hornets by 11

Sixers at Lakers

The Lakers have one of the most dominating defenses of the Jackson era. The one weakness they do have is against great penetrating guards creating for their team. The Sixers should have a good shot at the Lakers as long as Iverson makes sure he creates for his team, as well as takes it strong to the hoop. Kukoc needs to step up his game. Shaq should have another big game unless Geiger can somehow get him in foul trouble. Kobe will really need to score since Glen Rice will have a hard time against the tenacious defense of Lynch.

Ali's pick: Sixers by four

Can anybody stop the Lakers? I don't know, but the Sixers sure came close and lost by only 3 in their previous matchup-and that was before the Sixers became hot and Kukoc became a force in their lineup. The Sixers are currently on a seven-game winning streak and have recently beat the best in the East-the Pacers-so why couldn't they beat the best in the West? One word: Shaq. The Sixers simply have no one who can guard him, and the constant double team he demands will lead to open shots almost every possession. The last time the Sixers won seven in a row was 1991, but this streak will not survive the Lakers.

Justin's pick: Lakers by eight

Sixers at Kings

The Sixers have a legitimate chance of making the third seed in the playoffs, but also have a risk of falling to the fifth spot. A lot of teams are scared of the Sixers as their defense is as tough as ever and since Kukoc has gotten comfortable and been much more fluid and efficient. If Iverson shoots better, the Sixers should be (with the Knicks) considered the favorites in the East.

The Kings are also battling for playoff position. They are guaranteed to make the playoffs, but at their current eighth spot they would run into the Lakers. This might not spell doom, since out of the elite teams in the west the Kings have the most success against the Lakers. This will be a good test to see how well Jason Williams can perform against a great defensive team and a great offensive threat in Iverson.

Ali's pick: Kings by six

The Sixers beat the Kings earlier this season and that was before they acquired Kukoc. The Kings will need to find a way to stop-or at least contain-Iverson, who scorched them for 50 points previously. However, the Sixers will have their own nemesis to contend with on the Kings-Webber. Webber lit up the scoreboard for 32 points last game. This game will come down to whose leader is able to come up bigger in the clutch moments. Iverson did it last time and the Sixers won. However, the deciding factor may be Kukoc, who has been dominate for the Sixers during their current winning streak.

Justin's pick: Sixers by nine

Knicks at Lakers

People have to realize that if the Knicks were healthy all season they would have easily been the best team in the East. Their depth in the frontcourt can only be outmatched by Portland. Ewing, despite his age and injuries, is still one of the elite centers in the league. Also, either Houston or Sprewell almost always has big game each time out. Even though Ewing is still an elite center, his game is still a notch below that of Shaq. The best thing the Knicks and Ewing can do is to create through Houston and Sprewell while Ewing lures Shaq away from the basket. If they keep dumping the ball down low to Ewing, the Lakers defense should have an easy game.

Ali's pick: Lakers by 13

This matchup of likely championship contenders will come down to how dominant Shaq plays. The last time they two played, O'Neal dominated Ewing and the rest of the Knicks by scoring 43 points, while holding Ewing to only 12 points. However, the Lakers were only able to get offense out of O'Neal and Bryant, the rest of their team was dormant, with no one else able to score over 6 points: Shaq and Kobe accounted for 54 of the Lakers 80 shots. The Knicks however have a more balanced attack, getting four players into double figures and more equally distributing the ball. The key for the Knicks to win will be to contain either Kobe or Shaq, if one of them is held to under 20 points and no one steps up, the Knicks could win.

Justin's pick: Lakers by six

Rockets at Grizzlies

People who don't follow the Grizzlies are really missing out on a few of the best young players in the league and possibly the dominant back court of the future—with college teammates Bibby and Dickerson. Factor in Abdul-Rahim and, with the addition of some experience, the Grizzlies should contend for the playoffs next year. The Rockets are another team in the rebuilding mode. However, due to their good drafting skills they are further along the road than most would expect. They have great young guards in Francis, Anderson and my favorite, the 'Cat' Cuttino Mobley. Francis and Mobley play with so much passion it is great watching them play even though their team might struggle at times. This should be a great matchup of young talent in the backcourt.

Ali's pick: Rockets by two

In this matchup of sub-par teams, Houston has the advantage with a deeper bench, consisting of Drew and Mobley among others. Houston will be lead by Francis, their leader all season, but he will have a challenge in the backcourt with Bibby and Dickerson next to him. The Rockets have defeated the Grizzles twice this season already, however this game will end differently. With Olajuwon out of the lineup, the Grizzlies frontcourt of Harrington, Reeves and Abdul-Rahim should dominate the boards and scoring in the post.

Justin's pick: Grizzlies by four

Final Four Preview

Reuters/Steve C. Wilson

Wisconsin: Dick Bennett is an underrated coach who has made the most out of this Badger team all season. He is always prepared for his next opponent and wins the game using—of all things (gasp)—defense. Before this year, they hadn't won a NCAA tournament game since the 40's, but their scrappy and sometimes boring style of play has taken them deep into the tournament. They really have no standouts on the team, but can go deep into their bench, always allowing for fresh legs. This undoubtedly helps out junior Mike Kelly, who is the leader on the court and an excellent defender. But the Badgers still need someone to put the ball in the hoop, no matter how good their defense is. Ultimately, if Mark Vershaw can't get into double figures, there might be no one to save them offensively. They have to play the game of their lives to beat the Spartans.

Odds of Winning: Slim (but who really knows with this tournament)

AP Photo/Eric Gay

North Carolina: The young and talented Heels are led by senior point guard Ed Cota. After being suspended early in the season, he has been able to put it all behind him and average 10.2 points and eight assists per game. He is joined in the backcourt by freshman phenom Joseph Forte, who has been a bright spot all year for the Heels. But the Heels fate will lie on their frontcourt of Brendan Haywood, Kris Lang and Jason Capel. If Haywood keeps playing big instead of disappearing like he sometimes does, they will win. He needs to score 20 and grab at least 10 boards to set the tempo against a smaller Florida team.

Odds of winning: Fairly good (as long as the old Heels of the regular season don't show up)

And then there were four

By Rob Schmicker

After approximately five months, the 1999-2000 college basketball season is down to four teams. Meeting in Indianapolis at the Final Four will be Big Ten foes Michigan State and Wisconsin, as well as North Carolina and Florida. That's right—after a year dominated by Stanford, Duke and Cincinnati—these are the four teams that are still standing, each of which has taken a different road to Indianapolis.

For North Carolina, preseason expectations were high as the Tar Heels were ranked in the top five nationally. With such an athletic team that was still extremely young, many people were thinking dynasty. But it never happened, as North Carolina struggled through a year in which they dropped out of the Top 25, lost to archrival Duke twice, and compiled a disappointing 18-13 record.

Many said they didn't deserve an invite to the Big Dance, but coach Bill Guthridge has turned things around at exactly the right time. After a first round win over Missouri, the Tar Heels pulled off an improbable victory over top-ranked Stanford. But no one ever thought they could keep it up and win their next two games to advance to their third final four in the last four years.

Their opponent, Florida, was a top 10 team in the preseason, but didn't receive much attention around campus since it is primarily a football school. The Gators were solid all season and finished with a 23-6 record, good for third in the SEC. But in the second round of the SEC tourney, the Gators were upset by Auburn who were playing without their star player, Chris Porter. This is never the way to head into the tournament, but Florida rebounded.

Waiting in the first round was a tough Butler team who was looking to pull the upset of the young tournament. But instead of caving in, sophomore guard (and future star) Mike Miller hit a tough running jumper as time expired to win the game 69-68. That seemed to be a sparkplug, as the Gators have never looked back. They have defeated the first, second and fourth-ranked teams in their region, earning them a well-deserved spot in the final four.

Wisconsin, like North Carolina, is an eight seed with a 21-13 record, but the comparisons end there. They were expected to finish in the middle of the Big Ten in the preseason, and making the tournament was their biggest goal. They finished the regular season with an 8-8 conference record, and had it not been for their improbable run to the Big Ten title game, the Badgers might have been playing in the NIT. They were a solid team, but no one thought they would even get to the Sweet Sixteen. But here they are in the Final Four and still they are receiving no attention, as they have won quietly all tournament long. But if the Badgers can finally beat Michigan St—who is 3-0 against them this year—they might finally be able to silence their critics.

In the most unpredictable tournament in recent history, Michigan State is the lone one seed remaining. After the Spartans Final Four appearance a year ago, then-junior guard Mateen Cleaves decided to stay in school because he wanted to "cut down the nets in the final game of the season." Needless to say, expectations in East Lansing have been high all year and the Spartans have done everything expected of them so far.

What makes them especially dangerous is that they seem to get better as the game (as well as the season) goes on. Cleaves got injured in the preseason and missed almost two months. They struggled during that time, but have been on target ever since. Both Utah and Syracuse had halftime leads over the Spartans only to end up on the losing side of the game. Whenever a sense of urgency is in the air, the Spartans kick into high gear thanks to the leadership of their three seniors.

Will the craziest tournament ever get even crazier in its final weekend or will the Spartans finally return some order to things? You've got to tune in to find out-and it will be worth watching!

Michigan St: The Spartans have been able to avoid the upset bug all tournament long and are the overwhelming favorites. No one in the tournament can match up with the experience that seniors Cleaves, Morris Peterson and AJ Granger bring. You never know who will be the one to beat you. Granger is a quiet player who will grab 10 boards every game, including key offensive boards that lead to easy put-backs. Peterson can bury the opponent with his threes once he catches fire, and Cleaves is so mentally tough that I would not want anyone else leading me into the final minutes of a championship game. He will always find the open man—whether it be Peterson, Granger or Charlie Bell—and will not turn the ball over during crunch time.

Odds of winning: Excellent

AP Photo/Michael Conroy

Florida: The Gators are a smaller team than North Carolina, but will not be intimidated at all. Led by Miller and freshman Donnell Harvey, the Gators have shown fire and poise all year. Much of this can be attributed to their 34-year old coach Billy Donovan, a master at motivating his players. Before the Oklahoma St. game, he had the team write who they dedicated their victory to and place it on their ankle. Not only were they playing the game for themselves, but for someone who meant a lot to them. Through tactics like this, he has been able to push his team and help block out any letdowns. Harvey, Miller and Ted Dupay can't do it all by themselves, so Udonis Haslem and Kenyan Weeks are going to have to step up. If they can control Haywood and make him lose confidence, look for the Gators to roll.

Odds of winning: Very Good

AP Photo/Jamie Germano

Bucknellian Expert Picks

"March Madness" indeed. In this year of upsets and surprises, the Badgers of Wisconsin will be crowned the superior team in NCAA basketball. "Why?" you ask? Because the Badgers have an awesome nickname. "Badgers? BADGERS? Yes, we need some stinkin' badgers!"

—Adam Haas

If you don't pull for a gritty, hardnosed, blue-collar team, then I don't like you. CBS will be wetting themselves if these boring no-names advance to the title game. And I'll be smiling.

—Carmen Mauriello

This might be a long shot, but I think North Carolina has as good a shot as any to win the championship. I know Michigan State is probably the best team, and Florida will be the favorite to beat the Tarheels, but I'm going with the underdog. I picked Connecticut all season long in 1999, so my reputation should precede me on this one. Go Heels!

—Brian Watson

Above all odds, I'm picking North Carolina to get the ring and take up permanent residence in Bracketville. My reasoning is simply two words: Ed Cota. He was playing hoops out of the womb and will lead the Tarheels to the NCAA Championship.

—Matt Albert

I think Florida's the one to watch. They'll definitely beat Wisconsin, and meet Michigan State in the finals. Go Gators!

—Monica Montgomery

Since UCLA took Maryland out I think Florida will win the whole thing. They beat Duke, which takes physical skill AND mental motivation since Duke was the favorite in the contest between the two. Also because that's what they were saying on SportsCenter the other day.

—Rebecca Rowland

I think Michigan State will be cutting the net down this year. It's their second time to the Final Four and—with the big win over Iowa State—the Spartans seem unstoppable. Plus, they have beaten their next opponent, Wisconsin, the last three times.

—Chuck Vicente

I see Michigan State going all the way. Mateen Cleaves is an awesome point guard and can run their offense with superior efficiency. They are the number one seed and you've got to believe that a top seed can go all the way, even in this year of big upsets.

—Jim Leahy

I've been wrong all tournament long, but I don't see how anyone can beat Michigan State. They are just too strong and the seniors won't let them lose. Cleaves came back to win the title and that's what he'll do. As for their opponent in the final, I think Florida will beat North Carolina behind a strong game by Mike Miller. The Gators don't start any seniors, so I think they'll be back next year to challenge for the title (that is if no one leaves school early for the NBA). In what should be a great game, I think Michigan State will go on a late game run and defeat the young and talented Gators, 74-66, for the title.

A slipper for the Heels?

Think of all the words that apply to a low-seeded team that advances far into the NCAA tournament. Think of all the terms that are used to define a team that, against seemingly all odds, fights off the 'big boys' of college basketball. Darkhorse. Sleeper. Cinderella. The list goes on.

Think of all those terms.

Now think about how many of them apply to North Carolina.

But yet, when Final Four games get underway this Saturday night in Indianapolis, that's exactly what the North Carolina Tarheels—the most decorated team this side of UCLA in all of college basketball—will be.

The Tarheels will be a Cinderella.

It's a tough concept to get adjusted to. The team that brought us Michael Jordan and James Worthy and Dean Smith and countless others. The team that has advanced to the NCAA tournament 33 times and the Final Four 14 times. The team that, until a losing streak this season, hadn't been forced from the Associated Press Top 25 poll in more than a decade.

Commentary

Senior Editor
Chirs Ellis

The ultimate college basketball favorite—a Cinderella?

This Tarheels team, though, is different. This team wasn't expected to get anywhere. This team had to fight not only the immense pressure to win, but also realized first-hand how it felt to lose. This is a team that has heart and poise.

And that's why, despite being only a #8 seed and finishing the regular season with 13 losses, this Tarheel team might be the best candidate to earn the school its first national championship since 1993. This team has seen adversity. The Final Four? The Florida Gators? Not even close.

The trouble for this year's Tarheel squad actually started at the end of last season, when UNC, seeded third in the West Regional, fell to 14th seeded Weber State. This was not your typical first-round NCAA upset and North Carolina fans knew it. The loss to Weber State represented the first time in 18 seasons that North Carolina had failed to win at least one NCAA tournament game. In only three of those years did it fail to reach the "Sweet 16."

Suddenly, all the good that had surrounded the promotion of Bill Guthridge to head coach following Dean Smith's retirement were gone. The Final Four trips of 1998 and 1997 were a distant memory. Guthridge, Smith's had picked successor had—much like Smith in his early days at UNC—his head on the chopping block.

The problems became worse this season. Although a team dominated by underclassmen, the 1999-200 UNC squad was talented from top to bottom.

So talented, in fact, that Brendan Haywood, Ed Cota and company were ranked as high as third in the AP rankings.

But something happened, something that had not happened in UNC for quite some time. The Tarheels began to lose. Often.

The problems reached their peak in mid-January after an unheard-of four game losing streak—including two losses to weaker conference foes Florida State and Virginia—dropped UNC to 10-8 overall and 1-3 in the ACC. UNC was not ranked for the first time in a long time. If there were grumblings about Guthridge's imminent departure before, they were being shouted from the top of Chapel Hill now.

As UNC's season ended, with a first-round exit in the Atlantic Coast Conference tournament to eventual NIT participant Wake Forest, even die hard bluebloods were ready to write the 22-13 Tarheels off. They don't deserve to be in the NCAA Tournament, some of UNC's faithful would say. Their exit would be early anyway, so why not use this year to send a message? Fire Guthridge, recruit more aggressively, send a message that mediocrity—at least by North Carolina standards—would not be tolerated.

Although much of the grumbling was out of frustration, it could have been easy to make a case for North Carolina to be excluded from the NCAA tournament. With 13 losses and an RPI rating of 41 (lower than no less than four schools who were on the outside looking in come selection time), it could be argued that North Carolina's inclusion as a #8 seed was as much in deference to the team's storied past than it was to the 1999-2000 squad. Deserved or not, most assumed the Tarheels would be out early anyway.

But North Carolina had an ace up their sleeve, an ace that too many major colleges seem to forget will usually prove worthwhile. They scheduled tough. Even at the risk of piling up losses, they scheduled tough. Buffalo and Howard were the only patsies on an otherwise grueling non-conference schedule that included tourney participants Cincinnati, Michigan State, Purdue, Indiana, Miami, Louisville, UCLA and UNLV.

And while North Carolina didn't win all of those games (the team finished just 5-7 against ranked opponents), they learned to play tough games all the time. They began to understand what it was like to go to the wire with top opponents. They learned what it was like to play top competition all year long. With a team composed primarily of juniors and sophomores, they were able to learn from it.

And in the three-week free for all that is the NCAA tournament, three weeks where anything can and usually does happen, tough losses to Michigan State and Cincinnati will serve you far better than a 110-48 blowout of Louisiana Tech ever could.

It's still difficult to pick against Michigan State to win the NCAA tournament, simply because of the talent disparity that the Spartans have over everyone else. But don't be surprised if it's North Carolina cutting down the nets Monday night, simply because this team has faced adversity and pressure that arguably no other NCAA tournament participant has faced. If character can win championships, North Carolina could be smiling all the way back to Chapel Hill.

Leaving one team very happy and one hand-picked successor to a legend looking pretty smart after all.

Softball stalls in rigorous stretch

Goes 3-5 in four double-headers vs. Delaware, Mt. St. Mary's, Siena and Albany

By Adam Haas

The Bucknell softball team went 3-5 during its rigorous schedule of eight games in five days, moving its non-league record to 8-8.

The Bison started their tumult of games by splitting a double-header at home with Blue Hens of Delaware. The first game went to the Bison, 1-0, with a Meredith Gill '03 hit that brought Kristina Tan '00 in to score. Delaware shut out the Bison 5-0 in the ensuing game.

Jenna Demetriades '02, who had Bucknell's only hit in the loss, was disappointed with the team's offensive performance. "We weren't working as a team—we're not gelling offensively," she said.

The Orange and Blue played another double header the following day at Mt. St. Mary's. Charity Ford '01 doubled in the top of the seventh, bringing in what would be the game-winning run in Bucknell's 3-2 win. Again, the Bison were shut out in the second game, falling 4-0.

Courtesy of Athletics Communication

Charity Ford '01 doubled in the game-winner against Mt. St. Mary's.

For the next double-header, the Bison traveled to New York to face Siena. They were unable to capture either game, losing 5-2 and 1-0.

"I think our hitting was our major weak point, and some of the losses can be attributed to the errors in the field," Demetriades said.

In the second game, Brandi Porter '03 hurled well from the mound—recording a two-hitter—but the Bison could not capitalize on her performance.

The final double-header was played at Albany the following day. The Bison and the Great Danes were evenly matched, and the first game required extra-innings to determine the victor. Ford and Steph Morgan '01 cranked RBI singles in the top of the tenth that sealed the Bucknell victory. In the nightcap, the Bison were able to tie Albany 2-2 in the sixth, but fell 3-2.

"As a young team, [the win over Albany] was a good learning experience," Heather Janowski '02 said. "We worked really hard together to pull off a tough win."

The Orange and Blue look to improve their hitting and fielding as they start league play this weekend. They will be looking for revenge against last year's Patriot League champions, Lehigh.

"If we can get by Lehigh, it will give us a boost in our next League games," Demetriades said.

Bison struggle to find consistency at Salem

Losses to rivals Salem-Teikyo and Slippery Rock overshadow two dominant wins

By Allison Kuhn

The Bucknell women's water polo team learned the importance of depth and teamwork in a grueling tournament this past weekend at Salem-Teikyo University in West Virginia.

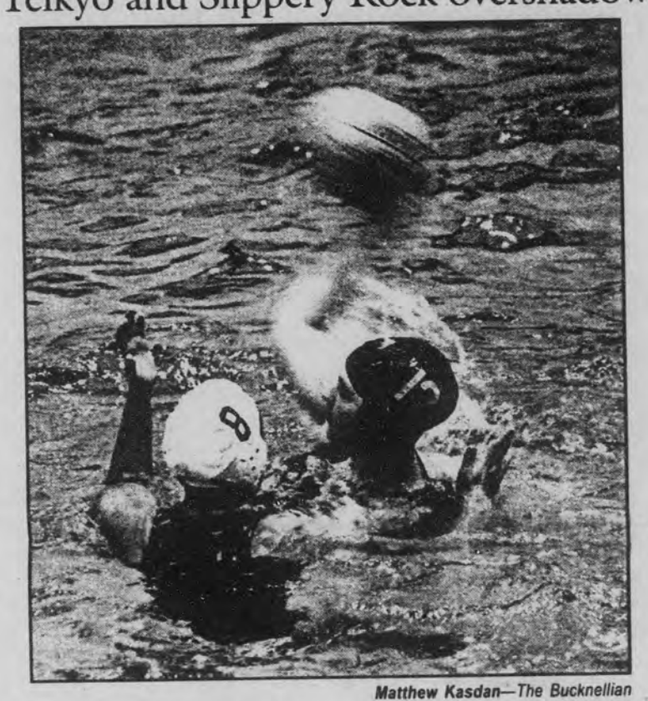
The Bison registered strong wins against Grove City, 18-2, and Washington & Jefferson, 15-4, but suffered losses to Salem-Teikyo, 9-6, and Slippery Rock, 12-5.

In their first game against Grove City, the Bison gave a team effort. They took advantage of their depth and utilized the entire bench. Julie McLaughlin '01 had four goals, three assists and two steals.

Katie Stahler '03 added four goals of her own, while Brooke Rea '02 netted three. DeAnn Long '02, Paige Cull '01 and Adrienne Schober '02 each had a pair of goals. Schober and Long each had four steals, Meredith Stevens '02 added five assists and three steals and Dana Clarke '02 had five steals.

"We overpowered Grove City with a strong counterattack and strong defense," head coach John Zeigler said.

The Bison showed the same skill when they faced Washington & Jefferson. They played as a team and managed to hold their opponents to one goal in the first half.



Matthew Kasdan—The Bucknellian

The Bison will travel to Princeton this weekend to challenge Queens and Princeton for the 2000 ECAC Championship.

Katie Kohn '03 and Dana Clarke each had three goals; Schober, Stahler and Hernandez each added a pair of goals. Hernandez also had five steals.

"In a similar fashion [to the game against Grove City], we capitalized on good press defense to hold Washington and Jefferson to only one goal in the first half while registering multiple goals from numerous team members," Zeigler said.

Then a disappointing loss to Salem-Teikyo followed. The Bison played better than they have in the past against Salem but were unable to come up with the intensity they needed to win.

Stahler had two goals in the first half and Schober added two in the last quarter for Bucknell. Stahler chipped in with an assist and two steals, while Schober had two assists.

Rea also recorded a goal and an assist, while Cull had four steals and an assist. Kristin D'Agostino '00 had nine saves in net for the Bison.

"We came out strong-getting up on them 2-0 after one period. But Salem rebounded and outscored us 4-1 in the second to hold a 4-3 lead at the half," Zeigler said. "They were able to draw ejections on us off of some defensive breakdowns, which led to man-up opportunities that they scored on."

"We had the enthusiasm going into the game that we needed," Emily McKnight '00 said, "but we neglected to make use of the depth of our team or to capitalize on our strengths."

In their final match against Slippery Rock, the Bison were unable to rebound and fell short on intensity and confidence in a losing effort.

Schober, McGlaughlin, Cull, Stahler and McKnight had onegoal apiece. D'Agostino had nine saves in the contest.

"We played low in the water and without the intensity of the night before. Although we were able to keep the score relatively close for a half, Slippery Rock outscored us 5-1 in the second half to win easily," Zeigler said.

Next weekend the Bison will travel to Princeton for the ECAC Championships, where they will face Queens, Princeton and either Villanova, Massachusetts or Harvard.

Women's tennis has "remarkable" turnaround

By Carmen Mauriello

Talk about a turn around. After being totally dominated 9-0 at the hands of Patriot League powerhouse Colgate last Friday, the Bison women's tennis team pulled a 180 and thoroughly defeated St. Bonaventure, 6-3, at home this past Tuesday.

The Bison were no match for the extremely talented Red Raiders squad, as Tracy Honko '00 was the only Bison to even capture a set. Head coach Rebecca Helt felt that her team played below its potential.

"We have better tennis to give Colgate," Helt said. "We hope to get by Lehigh and Lafayette and then we'll see Colgate again in the Patriot League team championships."

Helt was right, as her squad displayed its determination in fending off St. Bonaventure just four days later. Freshmen Morgan Lloyd and Laura Maisel led the women to victory. Lloyd, a junior varsity player seeing her first varsity action, was a double winner at the number six singles and the number three doubles. Maisel won at the number four singles and number two doubles positions, tying her with Kristin Inglis '02 with the team-best singles record of 4-2.

"It's good to know we have depth," Helt said of Lloyd and Maisel's performances. "They stepped up big."

Kary Wolford '02 was also a double winner at the number five singles and the number three doubles positions, where she teamed up with Lloyd. Inglis was victorious at number two singles, while Honko was part of the winning number two doubles team with Maisel.

"The players rallied together to do what they needed to do to win the match," Helt said.

The win moves the Bison to 3-3 overall (0-1 in the Patriot League) "[Our early-season success] is incredibly remarkable if you consider that, since January, we've lost three of our top six players and, on Tuesday, we lost another to possible injury."

The Bison host Lafayette today in an important Patriot League matchup, before traveling to UMBC and Mary Washington for non-conference matches this weekend.

Hooper's Classic

The Bucknell men's basketball team will host the first-annual Bucknell Hooper's Classic on April 30. The categories include a men's open division, a women's open division, fraternity division, sorority division and faculty/staff division. Email rumage@bucknell.edu to receive a free brochure.

Alcohol report reexamines Ten Point Plan

Dean Schweinsberg's study accentuates improvements, recognizes existing campus problems

By Brian Watson

Following the goals prescribed by President Adams' "Ten Point Plan to Reduce Alcohol Abuse at Bucknell," Interim Dean of Students Allen Schweinsberg has submitted a review of the program's progress to the President that will soon be sent to the Board of Trustees.

Schweinsberg's report, entitled "A Program to Reduce Alcohol Abuse at Bucknell," focuses on the major objectives initiated by the Ten Point Plan, most notably the goal to optimize students' well-being.

"It's not simply the students' own business about how much they drink, and when they drink ... because it's so obvious to me now that there are so many other victims," Schweinsberg said. "I will never agree with anyone who says that there's not a problem on campus, because there is."

The Ten Point Plan originated last spring following the results of a 1997 study conducted by the Harvard School of Public School that found 67 percent of responding University students classifying themselves as "binge drinkers," placing the University among the highest of the 140 schools surveyed.

The highest rate reported was 70 percent.

"For most people in the administration it's about the consequences of the abusive use of alcohol for all students whether they're of age or underage," Adams said last year. "Age is not the issue at some point. The issue is, instead, how does it affect the students and us?"

The report praises the development of alternative activities now available to students, including Uptown and growing traditions like the Chrysalis and Masquerade Balls.

Uptown, the half-million dollar social space in Swartz Hall has drawn substantial crowds since its opening in January. Schweinsberg reported that 250-500 students attend Uptown each weekend, with as many as 1400 at special events.

He believes that its presence displays "Bucknell's willingness to provide alternative social options, providing a better balance" of weekly offerings.

The Chrysalis Ball, approaching its second annual event, along with the Masquerade Ball, represent traditions the University hopes will become staples in its yearly calendar.

Schweinsberg also noted the Greek community's increasing compliance to University policies, evidenced by the growing control on underage drinking. Alcohol-related incidents have been on the decline based on data up until February.

Phi Gamma Delta and Theta Chi's national fraternities mandate their chapters to go "dry" within the next two years, another key factor in the report's optimism concerning Greeks.

Plans for new facilities, including the new dormitory and athletic facilities, will add to the "expansion and enhancement" of students' well being. With the new residence hall, the University hopes to build on the effectiveness of substance-free hallways.

The new dorm will accommodate over 300 students in an effort to relieve overcrowding, which "should allow for more pleasant living on campus," according to Schweinsberg.

"This is not a direct alcohol initiative, but just making life a little better here helps."

Another major factor in instilling improved alcohol management is the increased communication between the University and parents. A new law allows University officials to notify parents or guardians of their children's violations.

In a new attempt to clarify the University's stance on alcohol abuse, Adams enclosed a letter to each accepted student. The letter, according to Schweinsberg, is "basically positive," emphasizing traditions and supporting students' pursuits to remain alcohol free, stating, "Bucknell ... is a place firmly committed to the elimination of abusive drinking and the destructive behavior often associated with it."

The University has also introduced a new system of uniform sanctions, shying away from the "clean slate" afforded to students a year after a violation is committed.

The new plan will put more emphasis on previous violations, forcing students to take continued responsibilities for their past actions.

"Repeat violations in the next year or two can have some very serious consequences," Schweinsberg said.

He noted that the University is committed to helping students overcome problems, pointing to the opinion that national experts hold, claiming that tough sanctions and increased education will not solve all problems.

A combination of the two, plus alternative options and continued communication between students and University employees will help correct problems, but the primary responsibility for curbing underage drinking will ultimately fall on students.

As a faculty member of 30 years and through his administrative experience this year, Schweinsberg has found a new perspective on the problems caused by alcohol abuse.

"I will never look out upon my classroom and notice empty seats with the same level of unconcern as I have before because now I know more about why those seats are empty."

Screening finds drinking trends

By Laura Cardinal

Ever wake up with your clothes still on, a splitting headache and an intense wish that you had stopped a few drinks earlier the night before? Do you know what to do if a friend drinks too much and passes out?

If being hung over is not your idea of fun, then it might be time for you to find out your drinking score.

This Thursday, Apr. 6, the University will be participating in National Alcoholic Screening Day (NASD). By attending the screening students and staff will be able to take an anonymous self-test for alcohol problems.

There is also the opportunity to participate in educational programs which are designed to help participants answer important questions concerning alcohol use.

The topics range from defining binge drinking to what goes on inside your body when you are drunk to how to help a friend whom you feel abuses alcohol.

Finally, participants will have the opportunity to talk one-on-one with a health professional who can answer specific questions, and, if appropriate, help you to obtain the support and treatment services available on campus.

Due to the overwhelming evidence that students ages 18-21 are more likely to engage in high-risk drinking, i.e. binge drinking, than any other age group, the NASD was created.

In 1999, the program's first year, an estimated 50,000 people participated, with over 30,000 screened at participating college and universities. This overwhelming success gives viability that students, given the opportunity, will come forward and seek help for alcohol problems.

If you feel that you or anyone you know may have a drinking problem, you are encouraged to participate in this program. Screenings will take place this Thursday from 10 a.m. to 2 p.m. in Walls Lounge and from 4:30 p.m. to 6 p.m. in room 241 in the Langone Center.

If these times are not convenient, or if you decide later that you would like to be screened, contact Bob Thomas, the coordinator of drug and alcohol programs at Bucknell, via email, (rsthomas@bucknell.edu) or call his office extension (71159).

Thomas will be scheduling individual or group screening appointments throughout the rest of the year.

Brothers and sisters enjoy the campus fun and games

Fun for all ages as the University plays host for the annual Y2PLAY: Siblings Weekend 2000, sponsored by BAC and RHA

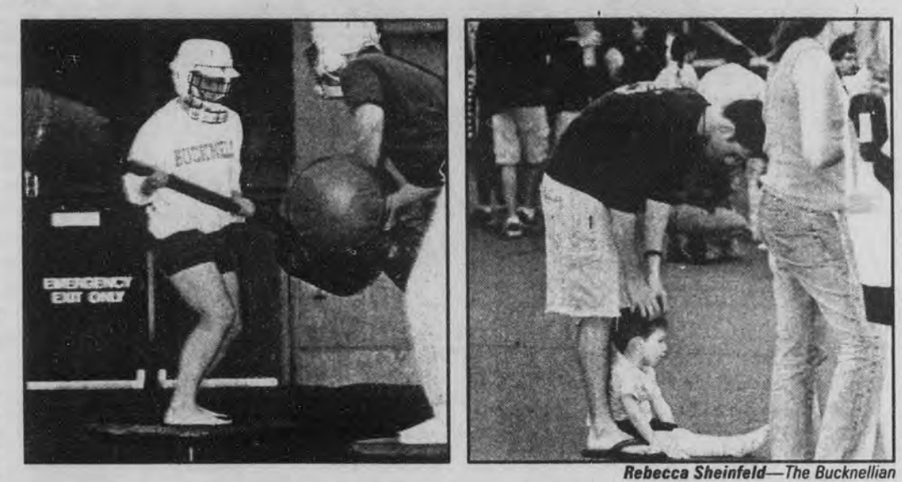
By Anne Monoky

Over this past weekend, many University students participated in a long-standing tradition on campus, Siblings Weekend. Sponsored by RHA and BAC, the weekend provides students and their siblings with an opportunity to visit campus and get a taste of real college life. The theme of this year's events was "Y2PLAY: Siblings Weekend 2000."

Katy Zachry '02 and Jackie Flicker '02 both worked on the committee that planned the events. "We tried to choose events this year that went over well in the past," Zachry explained. Some of the events that took place were a showing of *Toy Story 2*, a DJ Dance at Uptown and concerts featuring Two Past Midnight, The Silhouettes and The Jazz Machine.

"We had good attendance consistently at the events throughout the entire day," Zachry said.

"The committee did a great job of advertising the events not only to students with siblings, but the entire campus," said Julie Fitzgerald, assistant director of campus activities and programs. "It was really great to go to the picnic and see professors with their families— it was a real community event."



Rebecca Sheinfeld—The Bucknellian

Students and their siblings, along with University staff and their families, enjoyed a weekend full of activities around campus, including a carnival at the Fieldhouse (shown above.)

"My little brother who is eleven came for the weekend. Overall, we both had a great time," Scott Solomon '03 said. "The Carnival was great! We both enjoyed jousting, the obstacle course, the inflatable slide, the fortune tellers and the lazer tag. Everyone there seemed to be having a lot of fun."

In years past, RHA and BAC have run two separate weekends for siblings to come to the University, yet according to Flicker, "The two groups decided to join forces the past two years in sponsoring this event, and the response has been great."

"I thought Siblings Weekend was a blast! It seemed to be an overall fun and exciting weekend for both students and their siblings," said Carol Varona '03, public relations coordinator for RHA. "It was a great weekend for fun and those involved were very pleased with the turnout at each and every event. It was a huge success and I am already looking forward to Siblings Weekend 2001!"

Public Safety Log

March 28, 2000

HARASSMENT BY COMMUNICATION (E-MAIL) - Public Safety responded to Trax Hall for the report of a student receiving harassing email. Lewisburg Police was notified and the incident is under investigation.

AMBULANCE TRANSPORT - Public Safety responded to Swartz Hall for the report of a student experiencing difficulty breathing. The individual was transported by ambulance to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

March 29, 2000

VEHICLE ACCIDENT/HIT & RUN - Public Safety responded to Trax Lot for the report of a hit & run accident involving a student vehicle backing out of a parking space and striking a parked car. The incident is under investigation.

March 30, 2000

MEDICAL ASSIST - Public Safety responded to the Langone Center for the report of an emotionally upset individual. The person was transported by a family member to Geisinger Medical Center for treatment.

March 31, 2000

INFORMATION - Public Safety responded to Swartz Field construction site for the report of an injured contract employee. The individual was transported by ambulance to Evangelical Community Hospital Emergency room for treatment and later released.

INFORMATION - Public Safety responded to Coleman Hall for the report of an employee receiving suspicious phone calls. The incident is under investigation.

INFORMATION/OFF CAMPUS HIT AND RUN - Public Safety responded to University Avenue for the report of damage to a parked student vehicle. Lewisburg Police was notified and the incident is under investigation.

RECOVERED PROPERTY - Public Safety responded to Swartz Field construction site and recovered a large black suitcase. The bag can be claimed at lost and found.

April 1, 2000

TAMPERING WITH FIRE EQUIPMENT - Public Safety responded to Sigma Chi Fraternity House for a fire alarm activation caused by two discharged fire extinguishers. The incident is under investigation.

UNIVERSITY PROPERTY DAMAGE - Public Safety responded to Trax Hall for the report of broken glass in an exterior door. Window screens from Kress Hall were also located in a search of the area. No witness or suspects could be found.

INFORMATION/HARASSMENT BY COMMUNICATION - A student reported to Public Safety having received a harassing phone call in a Taylor St. House room. The incident is under investigation.

April 2, 2000

INFORMATION/ALCOHOL VIOLATION - Public Safety responded to a Bucknell West Mod for a fire alarm activation which may have been caused by marijuana smoking. Public Safety observed beer in the Mod and determined that the residents were under 21 years of age. Citations for underage drinking were issued.

DISORDERLY CONDUCT - Public Safety responded to Swartz Hall for the report of an intoxicated male harassing a student. The suspect was gone upon the arrival of Public Safety. The incident is under investigation.

VANDALISM/TAMPERING WITH FIRE EQUIPMENT - Public Safety responded to Phi Gamma Delta Fraternity for a fire alarm activation caused by a discharged fire extinguishers. The incident is under investigation.

INFORMATION/MEDICAL TRANSPORT - A student requested transportation to Evangelical Community Hospital Emergency Room for treatment of stomach pains. Student Health Service driver escorted the individual to the hospital and later returned her to campus.

April 3, 2000

MISSING UNIVERSITY PROPERTY/POSSIBLE THEFT - Public Safety responded to Coleman Hall for the report of missing wall clocks. No witnesses or suspects could be located in a search of the area. The incident is under investigation.

NON EMERGENCY MEDICAL TRANSPORT - A student requested transportation to Evangelical Community Hospital Emergency Room for treatment of cut lip. A Student Health Service driver transported the individual to the hospital and later returned him to campus.

Greek planning forum moves ahead

By Katie Marston

What is our Greek system really doing for the University and its members? How is it helping the community and how can it be improved? In order to answer these heated questions, the Greek Strategic Planning Initiative has been developed by the Board of Trustees as a means of re-evaluating the effect of Greek organizations on the University student experience.

This past Sunday was the second Greek forum in the proposed year-long program. During the previous sessions, each group was questioned on their opinion of the University's Greek system.

Tri-Delt representative Melissa Smock '01 said, "It is great to see all the Greek organizations coming together to share ideas about their future to work toward improvement."

Conducted every several years, this program called together a steering committee to represent all the major stakeholder groups involved in the University. Students (both Greek and non-Greek), faculty, staff, trustees, alumni and parents have been taking a look at the Greek system to determine where the problems lay and the possible remedies that exist.

These various groups work with an outside planning consultant to understand the system as a whole by gathering data and opinion from the Council on Greek Life (COGL); other University resources; focus groups among faculty, students, and staff; and planning forums with teams from each fraternity and sorority chapter.

"Their positive and negative opinions really help us see how we are viewed on campus," Interfraternity Council President Keith Hofmann '01.

As different fraternity and sorority members broke into groups to evaluate the stakeholders' views on the positive and negative effects of Greeks, it became apparent that the general opinion was not a good one. Various stakeholders came up with such adjectives as "racist," "sexist" and "anti-intellectual" to describe interaction among Greeks. Some of the stakeholder groups expressed some optimistic opinions, but an overriding sentiment of disapproval seemed to dominate the reports.

When asked what stands out most in their minds about the University's fraternities, administrators claimed that the system offers male bonding, but is exclusive at the same time.

However, the strategic planning hopes to address these issues and make recommendations to the Board of Trustees at its Fall 2000 meeting. While this program is only in its beginning stages, the problems with the Greek system are still being determined.

In addition, the committee is open to opinions and suggestions toward the planning process via the University's web site, where questions will be posted along with updates on the steering committee. With the combination of these diverse outside resources, the Strategic Planning Initiative hopes to improve the University's Greek System for the entire campus community.

Theta Chi suspended pending investigation

Alleged House Party violation results in second chapter suspended this semester

TO THE CAMPUS COMMUNITY

The Bucknell chapter of Theta Chi has been placed on immediate suspension pending the completion of an investigation and disposition of potential charges resulting from an alleged violation of University policy during House Party Weekend.

Under the terms of the suspension:

1. Theta Chi may not hold chapter meetings without prior permission or host registered social events of any kind.
2. The chapter's new member education program is suspended, and the chapter's new members may not visit the chapter house for any reason.
3. The chapter may not be represented on the Interfraternity Council Executive Board or vote at Interfraternity Council meetings.

If you have specific questions about the situation, you may direct them to Roy W. Baker, Assistant Dean of Students, at 71602 or via e-mail at rbaker@bucknell.edu.

Allen R. Schweinsberg
Interim Dean of Students

Rebecca Sheinfeld—The Bucknellian

The Theta Chi chapter is forbidden to host registered social events, hold chapter meetings or participate on the Interfraternity Council.

Passover 2000/5760

Bucknell Hillel *cordially invites students, staff and faculty to join us for Passover!*

Seders:
Wednesday, April 19 at 6pm in the Terrace Room, LC
Thursday, April 20th at 6pm in the Refrectory, LC

Lunches: Thursday, April 20th- April 27th from 11:30 - 1:30pm
Dinners: Friday, April 21st-April 27th from 5:00 - 7:00pm
All lunches and dinners are in the Scullery (LC 233)

Everything will be Kosher for Passover and delicious!

Costs:
*Meal plan users: Use your meal plans
*All others: Seders—$9.00
Lunches—$5.55
Dinners—$6.85

RSVP by Wednesday, April 12 to Daniel Morel x75336 or dmorel@bucknell.edu. Send name, meals requested and S.S.# if using a meal plan.

Ben Detwiler hoped to make the world a better place. That hope died when he was killed by a drunk driver.

What should you do to stop a friend from driving drunk? Whatever you have to.
Friends don't let friends drive drunk.

U.S Department of Transportation — YOU LOSE — Ad Council

This Week in Bucknellian Headline History

Bucknell vs. Villanova

April 30, 1901

Bucknell lined up against the strong Villanova team in her second game on the home field and played a very good game of ball, holding the visitors down to six runs. Villanova proved to be the fastest team Bucknell has met this season. The Philadelphia Athletics beat them by one run earned in the ninth, while Gettysburg College and the Carlisle Indians were defeated by the Villanova boys.

The game opened with Carlisle at bat, O'Neil gave him his base on balls but was caught at first. Teufel and Wiedensaul followed with two more outs. Villanova then came to bat and took four runs through several errors on Bucknell's part. It was these errors that won the game for Villanova giving a lead that was kept throughout the game.

The game with the exception of the first inning was very well played; two errors in that inning gave the visitors their lead. Good work was done by Veil and Hess in the Box for Bucknell and O'Neil for the visitors.

Marts Becomes New President

April 7, 1938

President of Bucknell University, that is the title that our former acting president Arnaud C. Marts accepted in Chapel this morning. Pleas, appeals, petitions and all other forms of persuasion on the part of students, faculty members, and the Board of Trustees finally induced Mr. Marts to take over the presidency.

Urged to continue in office by petitioned signed by the entire student body and faculty, as well as by unanimous action of the Board of Trustees, the businessman-educator who has been acting president since October 1935, assumed his new post with the understanding he would also continue his business duties in New York.

President Marts' decision was announced this morning at chapel services by Judge J. Warren Davis, of the United States Circuit Court of Appeals, acting chairman of Bucknell's Board of Trustees.

President Marts, who is president of Marts and Lundy, Inc., financial counselors for philanthropic organizations, will continue to divide his week between his New York office and the President's House as he has been doing for the past two years.

Today's 8 Page *Bucknellian* Ain't What it Used to Be

April 11, 1947

Today's *Bucknellian* with its screaming headlines, abundance of pictures, humorous features, and highest standard college journalism is a far cry from the small four column mass of tiny type, the first "Orange and Blue," which was virtually the starting gun f a fifty-year era of Bucknell journalism.

Unlike the headline following this year's State game on December 11, CAGEY CAGERS LOCK LION CAGE, TOSS AWAY KEY, the same sort of victory was heralded four days following a similar game in 1897 with a conservative line, "State College Defeated."

Unlike a full column of dull description of the Junior Ball in the "gay" nineties, today we have three column pictures of many hundreds enjoying themselves in Davis Gym.

In spite of the striking contrasts, it was a noble effort and a brave experiment on the part of editor Walter L. Hill '98, son of a former University president, and business manager Simon W. Gilpin '98 who turned their backs on the failures of Bucknell's two previous publications, the *College Herald* and *Bucknell Mirror*.

New Dormitory Telephone System to be Installed

April 7, 1978

Starting in September of 1980, students will be able to direct-dial long distance calls from their dorm rooms. This is the main feature of a new phone system being developed for Bucknell by the local phone company.

All dorm room phones will be tied directly into the Lewisburg switchboard, and students will be able to call out 24 hours a day. All administrative and academic phones will remain on the Bucknell system.

Every student will be charged an additional fifteen dollars on their room bills to pay for the new system. John Zeller, Bucknell's Vice President for Administration and Finance, noted that most students will save more than fifteen dollars from direct-dial savings as opposed to collect calls.

However, there appear to be several problems with the new system. Only a limited number of calls will be able to come back on campus, and students may have to wait to call another dorm. Additionally, the Bucknell operator will no longer be able to switch incoming calls to dorm phones; the number will have to be redialed.

Compiled by Jim Leahy

News Briefs

Japanese Cabinet Begins Process to Replace Comatose P.M.

Acting Prime Minister Mikio Aoki said Japan's cabinet resigned en masse Tuesday night so the ruling Liberal Democratic Party could choose a successor for the comatose Keizo Obuchi.

"We cannot allow a political vacuum to form," Aoki told a news conference late Tuesday afternoon, adding it had become clear Obuchi would not be able to resume his official duties. The Cabinet is required under Japanese law to resign if the prime minister is incapacitated.

CNN's Tokyo Bureau Chief Marina Kamimura reported that the party's secretary-general, Yoshiro Mori, was expected to be chosen party leader, and subsequently Japan's prime minister.

Mori has been touted as Obuchi's likely successor since the prime minister's illness was made public Monday. According to some reports, however, Foreign Minister Yohei Kono could replace Obuchi.

The prime minister was taken to Tokyo's Juntendo University Hospital on Sunday after complaining of fatigue. Doctors later determined he had suffered a stroke and placed him in intensive care. He later slipped into a coma and has been on life support.

U.N. Official Calls for Probe of Human Rights Abuses in Chechnya

The United Nations' top human rights official on Tuesday urged Russia to set up an independent panel to look into allegations of human rights abuses by both sides in Russia's war with rebel fighters in Chechnya.

After returning from a three-day trip to the region, U.N. High Commissioner for Human Rights Mary Robinson said she had heard numerous reports of abuses by both Russian troops and Chechen rebels and added there had to be a "day of reckoning."

Her trip included a short visit to the Chechen capital, Grozny, which was nearly leveled by months of bombardment by Russian troops.

"I was shocked and appalled by the harrowing accounts of the Chechen civilians," Robinson said in a statement. "I listened to testimony of summary executions, intimidation, looting by military personnel, disproportionate use of force, attacks on civilians' convoys, rape and other violations."

Robinson met with Russian Foreign Minister Igor Ivanov and told him that Russia, as the sovereign power in the region, bears responsibility for protecting human rights in Chechnya.

Ivanov denied the abuse allegations and warned against using the human rights issue "as a pretext for interference into Russia's domestic affairs." But Robinson said Ivanov agreed to consider her request for an independent investigation.

Seattle Police Blame Well-Trained Adversary, Lack of Funds for WTO Riot

Seattle police blame a lack of financial help and poor planning for their difficulty against a "well-trained and equipped adversary" during the violent protests against the World Trade Organization last fall.

"In retrospect, SPD commanders put their faith in historical precedent- the Seattle tradition of peaceful protest- in assessing the needs for policing the WTO event," Assistant Chief Clark Kimerer wrote in the report made public Tuesday.

The report was given to Chief Herbert V. Johnson, whose predecessor, Norm Stamper, resigned over the handling of the protests. Police were overwhelmed Nov. 30 when marches by several groups converged on the core of downtown. In addition to clogging streets and hampering the WTO gatherings, the crowds provided cover for a small number of people who smashed windows and looted stores, resulting in an estimated $3 million in property damage. More than 500 people were arrested.

Some officers ran out of the tear gas and pepper spray used to disperse crowds. Many officers spent hours without food, water or rest. The report recommends better planning next time, noting the city had only about nine months to plan for the event, rather than the 14 to 24 months considered standard by the State Department.

The report also says police did not prepare for a worst case scenario because of "the lack of outside funding sources" to reimburse the State Patrol, King County Sheriff's Department and other area police agencies.

Direct city costs for the WTO operations are estimated at about $9.3 million, $6.9 million of it incurred by the Police Department.

Judge Allows DNA Test of Robbery Suspect's Dog

Prosecutors will introduce DNA test results on a few strands of dog hair to link a robbery suspect to the crime. Judge Steven Emmert ruled Monday that DNA testing on hair samples taken from dogs at Dewayne Hickman's home will be allowed as evidence at Hickman's trial, set for July 10.

Officers found dog hair on a duffel bag left at a Minute Mart that was robbed in 1997 in the Texas panhandle town of Pampa.

The convenience store clerk was severely beaten and her arms were broken. The woman sustained amnesia, but under hypnosis she identified Hickman, District Attorney John Mann said.

Mann said officers used a search warrant to take dog hair samples, which were analyzed by a veterinarian who does DNA tests for a quarter horse registration program.

"They matched the hair on the duffel bag," Mann said. Hickman, 32, was arrested four days after the robbery and charged with attempted capital murder.

Nominations for Burma-Bucknell Award

By Laura Day

No, the Burma-Bucknell Bowl is not a sporting event. Rather it is a beautifully handcrafted silver bowl, given to Bucknell University by the Ambassador of the Union of Burma to the United States. Each year, a Bucknell University community member or organization is honored at the Commencement ceremonies with the Burma-Bucknell Bowl Award.

The award is designed to recognize those that have made outstanding contributions to intercultural and international understanding. In addition to being distinguished at commencement, the recipient of the award will be presented with a gift at the annual reception for graduating international students on Saturday, May 20, 2000 at 4 p.m. in Arches Lounge.

The Ambassador of Burma presented the original bowl to the University in 1958 on the tenth anniversary of the Burma-Bucknell Weekends. The deep connection between Bucknell and Burma began in 1846 when Eugenio Kincaid, a Baptist missionary on leave from his post in Burma, became a charter trustee at the University. After returning to Burma, Kincaid encouraged students to travel abroad to the University.

Maung Shaw Loo, a Burmese student, took the opportunity and became the University's first international student in 1858. Since then, the diversity of the campus has grown and the connection between the University and Burma has strengthened. Hence, from 1948-1965, the university annually hosted Burma-Bucknell Weekends that were designed to celebrate diversity.

Although the tradition has ended due to an oppressive regime in Burma, the spirit of the Burma-Bucknell Weekends continues to grow. The Burma-Bucknell Bowl Award helps keep the meaning and intentions of the Weekends alive. It is a tremendous honor and accomplishment. Any student interested in nominating an individual or organization must do so by Monday, April 17th. Nominations should include a description of the individual or organization's contributions to intercultural and international understanding.

Criteria for nominations include that the individual or members of the organization:

1. Give significant time and energy to help foster a campus climate that welcomes international students and engages United States students in international/intercultural programming.
2. Goes beyond what is expected in his/her job description or what is expected in the mission statement of the organization to promote intercultural and international understanding.
3. Affects the campus and community at a multitude of levels.
4. Is recognized for creating or expanding international and intercultural programs and/or services on campus.
5. Demonstrates leadership, intercultural sensitivity and a willingness to educate and provide outreach to others.
6. Promotes the ideals of world citizenship and is committed to fostering a broader understanding of the world.
7. A few other specific criteria depending on whether the nominee is an individual or organization.

For more precise criteria, access the online public folder of the Office of International Education. Send nominations to Barbara Rowe, Selection Committee, Burma-Bucknell Award, Office of International Education.

Campus Briefs

Westrum to Speak at Bucknell

John A. Westrum '86, President/CEO of Westrum Development Co. presents "How to Take an Idea and Make It Into a Profitable Company" on Tuesday, April 11 at 7 p.m. at the LC Forum.

Westrum started his business at Bucknell in 1986. From an idea and a dream that was analyzed and critiqued in his "Small Business Course," Westrum has taken a privately held land development company from start-up in 1986 to a projected $80 million in sales in year 2000.

Westrum's entrepreneurial strategy focuses on finding niches in a highly competitive field and promoting these ideas through innovative and creative marketing and finance campaigns.

Westrum's topic will be "How to take an idea and make it into a profitable company." He will also focus on how to do this without capital or experience.

Westrum was a featured speaker at the 1998, 1999 and 2000 International Homebuilders Shows in Dallas, Texas, a featured speaker at National Senior Housing Conferences, as well as numerous regional business events. He has been a regional finalist twice for Ernst & Young's Entrepreneur of the Year and the recipient of three regional Better Business Bureau awards, including Outstanding Employer and Excellence in Customer Service.

Westrum serves or has served on numerous charitable and business boards, and is very active in Habitat for Humanity and other charitable housing causes.

Please mark your calendar for this informative presentation!

Social Science Colloquium

Robert Bates, Eaton Professor of the Science of Government at Harvard University, will present the lecture, "Area Studies and the Disciplines," as part of the Social Science Colloquium on Area Studies and the Social Sciences. Professor Bates' presentation will take place on Wednesday, April 12, 2000, at 7:30 p.m. in the Gallery Theater.

Prior to his current appointment, Professor Bates was the Henry R. Luce Professor of Political Science and Economics at Duke University. He is a leading scholar on the political economy of Africa, and the author of *Political and Economic Interactions in Economic Policy Reform* (Blackwell, 1993), *Africa and the Disciplines: The Contribution of African Studies to the Humanities and Social Sciences* (University of Chicago Press, 1993), *Open Economy Politics: The Politics and Economics of the International Coffee Market* (Princeton University Press, 1997), and *Analytical Narratives*, with Avner Greif, Margaret Levi, Jean-Laurent Rosenthal, and Barry Weingast (Princeton University Press, 1998), among other works.

All are invited to attend.

Phi Beta Kappa Awards Committee

The Bucknell Chapter of Phi Beta Kappa is soliciting nominations from faculty for the annual Phi Beta Kappa Award, which goes to: "an undergraduate who, by work of art, research, or scholarship, shows, in any discipline, conspicuous achievement."

The award normally goes to a senior. The recipient does not need to be a member of Phi Beta Kappa.

Faculty wishing to nominate students must confirm with potential nominees their interest in competing for the Phi Beta Kappa Award, discuss with them what materials might best be submitted (honor's thesis, portfolio of art or creative writing, musical composition(s) with tapes, etc.), and ensure that the submission is delivered to the Phi Beta Kappa Awards Committee, c/o Julia Rudolph, Department of History, no later than April 17th. The nominating faculty member should write a formal letter of support outlining the nominee's accomplishments relevant to the award.

The award will be announced at the end-of-year President's Award Ceremony and at Commencement. A small monetary prize is included.

News Analysis

Why the big secret?

By Jim Leahy

When the word blackout comes to mind, one immediately thinks of electrical power. But what if the blackout was of the information kind, keeping citizens from knowing the truth about those running their country? Unthinkable in most places, yes, but in Japan, that is exactly what happened this past weekend.

Saturday morning, at 11 a.m. EST, Japanese Prime Minister Keizo Obuchi suffered a severe stroke and was admitted to an intensive care unit where he soon slipped into a coma, currently being kept alive only by a respirator. Twenty-two hours later, 9 a.m. Sunday, the government made the announcement regarding the Prime Minister's condition to the world.

Suffering a cerebral infarction, the most common type of stroke, Obuchi has been rendered brain-dead and will no longer be able to run the government. As a result, the Japanese Parliament will vote for his party's choice, Yoshiro Mori, as successor following the cabinet's resignation on Tuesday.

The Japanese people were kept in the dark for almost a day, and even then, the first reports out of the government were limited at best. Some people close to the situation admitted that this was a way to get the right candidate the easy path to Prime Minister. But the Japanese people still remain skeptical of the modernity and democratic qualities of their nation.

One has to think that things like this would not go too far here in the U.S. or in many other western democratic nations. The government is in existence to serve and protect the people and not to hold back information about leaders the people selected. The Japanese people had the right to know what happened to their Prime Minister and not be kept out of the loop.

Imagine if the US government withheld information about President Clinton's health. First, the media would probably find out anyway. If not, and the American people found out later, there would be mass disgust with the government. And our leaders would have their jobs at risk in the next election.

We do not know how this will develop in Japan. Will the people cry out in protest or will they just sit back and hope for a speedy recovery of the man they called Prime Minister? Regardless, the Japanese people will retain their skepticism of the government in the years to come.

University takes right steps against alcohol abuse

The findings from the last Harvard Alcohol Study and BARC II report caused mixed reactions throughout campus-many students questioned the results' credibility, others took pride in the high ranking among "binge drinking" colleges, while more simply ignored the problem.

University officials saw the results as a wake-up call, a chance to revamp their outlook on alcohol abuse. The resulting measures, though sometimes disagreed upon by students, have been nothing short of effective.

The University's attempts to limit abusive drinking and increase awareness have been commendable-Officials have undertaken a great deal of time and effort to study and treat this problem, with Bro's Ten Point'Plan as the centerpiece of the strategy.

The unveiling of Uptown, the University's newest alternative social option, became an instant success, and the Chrysalis Ball seems well on its way to becoming a fixture at the University-both much to the surprise of skeptical students.

Despite the growth of these alternative measures, the campus' "drinking culture" isn't going away-but it can be kept under control.

With a growing decrease in alcohol violations, the student body has exhibited a greater deal of control. Teamed with tougher sanctions and the looming threat of parental notification, students are being forced to act in an increasingly responsible manner.

The University's plan of attack, though viewed by many as extreme, is necessary. Although the administration has had to turn to more punitive measures, there is no doubt that its primary objective is the well being of all students, not only those who abuse alcohol, but also those who are effected by this abuse.

Many students will feel the backlash of the plan within the next few years. Those who are found in violation during their first year will not be let off the hook for a similar offense committed during their senior year. The "clean slate" policy is gone, and students will have to adapt to these changes accordingly.

The University has made a firm commitment to reducing alcohol abuse, a call to each and every student to think more carefully about their decisions involving drinking.

The Ten Point Plan, which seemed vague but determined, is beginning to take shape and produce positive results. For this progress to continue, the University must work hard to find a balance between sternness and support, favoring education and communication over condemnation.

Should the University offer athletic scholarships?

Yes

By Rebecca Rowland

When I started thinking about colleges, my guidance counselor gave me some advice, he said "there are two kinds of colleges in the world: the small smart ones and the big sports ones." And while I don't totally agree with his generalizations, he was pretty accurate in his description. By coming to the University, I am attending a "small smart" school and, for a while that didn't bother me. For a little while, anyway.

Now, with almost two years of Bucknellian-hood behind me, I realize what we are missing. I am in no way criticizing any of the University's athletic teams our—cross country is consistently one of the best teams in the nation, men's lacrosse is nationally ranked, both basketball teams did well as did many swimmers at the Patriot League tournament. But what it all boils down to is that we are still an unknown school in terms of sports. All of this can change if the University starts offering athletic scholarships.

Contrary to popular belief, schools in the Patriot League can offer athletic scholarships; Holy Cross offers basketball scholarships, as does Lafayette. The University offers need and merit based scholarships to students and, perhaps, some of those "find their way" into the hands of some athletes but other than that, we do not specifically offer scholarships for athletic ability. But we can, so why don't we? In an interview in *The Bucknellian*, new athletic director John Hardt said he saw nothing wrong with athletic scholarships—will he take Bucknell in a new direction?

Athletic scholarships have the potential to add prestige to the University's athletic teams. If we can attract talented players, our teams will inevitably become forces in the NCAA. With the added attention to the school, think of all the recognition and, essentially, free press we will get. People are constantly harping on fostering "Bucknell Pride," don't you think nationally recognized athletic teams will instill pride in the hearts of students and alum alike, as well as instill more enrollees and sponsorship deals in the hearts of the administration and athletic departments?

The University has refused to offer scholarships to athletes because the administration has felt that it would upset the "academic balance" at the school—that the presence of so many athletes will diminish the academic reputation of the University. If I were an athlete I would be extremely offended that the University assumed I could not stand up to the existing academic standards. By offering scholarships to athletes the University would not be allowing any old schmoe who can play a sport well to attend school here—guidelines and certain academic qualifications would still apply. We would still attract intelligent students; they would just know how to dunk, too.

No

By Ryan Delahanty

Currently, the Patriot and Ivy Leagues, are the only Division I sports conferences that do not offer athletic scholarships from all of its members. For example, Lehigh and Holy Cross recently added football scholarships, but for other sports prospective students base their decision to attend one of these colleges solely on reputation.

While the larger universities, usually referring to big state schools, attract premier recruits due to the fact that they can, in some cases, pay for the students entire education, places like Bucknell and Lafayette usually get students who would like to play a sport but who also wants to get a quality education.

For the most part, they realistically see that they will not make into a professional sports league, but they enjoy their sport, so they attend a superior academic school with respectable sports program.

If Bucknell and other members of the Patriot and Ivy Leagues gave out athletic scholarships, then the school would lose some of its appeal, winning without "buying" athletes.

I don't know if it's just me but the idea of giving out scholarships in order to attract the nation's top athletes seems a bad idea.

We, meaning Bucknell, are a small school and obviously we can't compete in sports like football and baseball with state schools that have thirty thousand students. It just won't happen.

Attracting student athletes who want to go to a competitive college that allows them to play their favorite sport should be enough of an honor.

This is not to say that I am totally in favor of never giving out athletic scholarships.

In certain instances, scholarships can be a positive thing. For example, if a disenfranchised student who is extremely talented at basketball, but who couldn't afford a college education, were able to go to school because of an athletic scholarship, then I would endorse the idea.

However, giving up our identity, which means not having athletic scholarships, isn't worth the recognition we would receive nationally in the media. It is a salient point to argue that if we were to follow the mold and provide scholarships, then we would prove that sports are about winning only, not the actual act of the competition.

And if that were to happen, then I truly would be at a loss to see how the politics of sports is run today.

Locking Horns

Students demand the return of air conditioners to rooms

By Jim Leahy

For the last few weeks, the weather has been providing for some days that would make anyone sweat. Although there have been some nights where the mercury has dipped into the "cold" range, there really has not been any use for the heat that continues to pour forth from the radiators that adorn the walls in every residence hall. The students of this institution deserve a break; we deserve some air conditioning.

Although those of you in buildings like Roberts where the only refreshment you get is that warm, muggy air blowing through the may think I am complaining a bit too much, I think not. Those buildings actually have some pretty big windows and you get much better air circulation.

We have these little slits that open very little, if at all, and provide for a paltry breeze. Plus, we don't have expensive air circulation devices that produce a breeze equivalent to some huge category five hurricane.

Sleeping is the task that becomes next to impossible to accomplish when it feels like you are being fried on a hot pan. There is nothing quite like sweating more under the covers than you did at sports practice or on that run you took earlier. Besides from being downright uncomfortable, your sheets actually begin to accumulate a little of the "BO" that your body so devilishly secretes when you least expect it.

Sweaty and smelly sheets make us take more trips to the laundry room to visit those machines that seem to suck down quarters faster than your mom can send them to you.

Heat does many brutal things to the body. You know the feeling of taking a shower in the morning to wake up and start the day on a high note. Then you get back to your room and begin to sweat like a pig.

"I've nicknamed my room the penthouse sauna since I am on the top floor and it is about 100 degrees," said Monica Montgomery '01.

As the Physical Plant continues to do its steam work on campus by digging huge holes in front of the Art and Music Building and behind Dana, don't they need to back off the steam flow to ensure the worker's safety? A perfect opportunity to turn off the heat presents itself every time one turns around.

Just give us back our air conditioning. We paid good money to live in the dorms at this place we call Bucknell University and those of us who were truly lucky get to bask in the glory of the coolness. All we ask is that we do not have to suffer through any more hot sticky nights wallowing in a pool of our own perspiration. Turn off the heat! (And while you are at it, what about cable?)

OPINIONS

"Special interests" not the culprit?

By Michael Boland

Anyone following politics for the last six months knows that "special interests" have become everyone's favorite punching bag. John McCain gained national prominence during his bid for the Republican nomination for president simply by promising to clean up Washington; to rid it of the "Iron Triangle" of money, lobbyists, and legislation, that it may once again do the will of the people. Bill Clinton made similar promises in 1992, and again in 1996, advocating campaign finance reform that would, "give our government back to the people," and "curb the power of special interests." Now Bush and Gore are broadcasting that same message.

It sure sounds good. But maybe the fact that we've been promised it for so long should make us stop and think about why it hasn't happened. The fact is, most of us don't really want special interests kicked out of Washington. We want 'someone else's' special interests kicked out of Washington. Are you passionately pro-choice? Are you in favor of strict gun control laws? Do you wish government did more to protect the environment? Well, these are the special interest groups that we've demonized. There are thousands of such groups located in Washington, D.C., and they're fighting for things that you believe in.

Personally, I want pro-life groups, and I want tax-reform groups in Washington, holding legislators accountable for their votes on the issues. How could a democracy function any other way? The First Amendment guarantees all of these groups, even the ones we don't like, the right to petition the government for whatever legislative goodies they think they can get away with. Maybe we shouldn't be so quick to jump onto the bandwagon of any candidate who promises us the world in terms of reform, but knows full well that he cannot single-handedly remove the underlying desire of individuals and groups to gain favors for themselves.

It should be noted that the current system of financing campaigns, at least for Congress, was created in a supposed 'reform' act in 1974. Do we need another law to make the whole system even more convoluted? After Watergate, the government came in and made a law and expected the problem of corruption in our national politics to go away.

Surprise, surprise- it hasn't. We still have scandal, even at the highest levels of the executive branch. What's going on?

Laws cannot replace electoral accountability. Instead of blaming gridlock and corruption on supposedly evil "special interests," it would be more constructive to look towards punishing those politicians whose hands we catch in the cookie jar, instead of waving off their actions as a 'mistake' and then re-electing them. The problem lies not with money being given, but with politicians trading money for political favors.

Ultimately, it's a question of the character of the people that we elect. A leader of good character will accept a campaign donation, but have the guts to defy that donor when necessary. A leader of poor character will sell himself out to the highest bidder and do whatever it takes policy-wise to assure himself a cash flow. It's a question of willpower.

While the campaign financing system itself is not perfect, I would suggest that we should be *more* fed up with certain politicians themselves, as more and more of them reveal themselves to be nothing more than common criminals.

That's why I don't know whether to laugh or cry when people talk about a politician being morally bankrupt, yet still able to do his job well. How can one have poor character, and still be able to tap into his sense of right and wrong in order to resist interest groups and formulate policy?

It's beyond explanation. When we compartmentalize a leader's "ability to lead" and "character issues" like that, we're fooling ourselves. They're not separate. They're one in the same.

Elian: he's a child, not a political issue

By Josh Guyan

I was trying to avoid talking about young Elian Gonzalez because it really is a simple dispute on its face. There would be no huge problem if this situation were treated as a legal immigration issue like it should have been rather than an impassioned political issue. Unfortunately there wasn't anything else worth writing about this week since I don't believe Microsoft will ever be broken up and George W. Bush's attempt to become the education candidate is laughable.

This Elian Gonzalez issue has been mishandled from the beginning. The only people that seem to be dealing with this issue in the proper, legal, professional manner are the INS and the federal courts. This boy has a father who is a legitimate, fit parent who wants his son back. Legally this boy should be returned to his father in Cuba so we can all go on with our lives.

The first to turn this situation into a circus was the Miami Cuban-American population and Elian's American relatives. The American family keeps restating its position and backing away from promises to comply with legal decisions. First they say they'll abide by a court decision. The federal court found against them and for the INS. So then they said they would give Elian up if his father would come to the U.S. to get him believing Castro would never allow that to happen.

Then the father made plans to come to the U.S. and the family again backed away from their promise. They are now talking about forming a human chain around the house so as not to release Elian to the federal authorities when the time comes. They refuse to recognize the father's legitimate, legal right to his son.

The conservatives jumped on this issue because they love proclaiming that they are anti-communist. The Cold War is over and they can't gain popular support by opposing The Soviet Union or now Russia so they latch onto an issue involving Cuba. Of course it's popular to be anti-communist—Americans don't like communists.

What confuses me is that conservatives are supposed to be pro-family. Isn't the Republican Party the family values party? If they are so pro-family why would they deny a good father the right to his son? I guess because they are more anti-communist than they are pro-family.

I also thought conservatives and the Republican Party believed in law and order. No matter what the law everyone must follow it or we risk anarchy. Then, on Sunday, I hear George F. Will, one of the most highly respected conservatives in the nation (certainly a conservative I respect), declaring the need for the Cuban-Americans in Miami to practice civil disobedience. Suddenly the party of law and order becomes the party of civil disobedience.

Al Gore is no better. He is obviously speaking out in favor of citizen status for Elian because he wants to contest Florida in the election and he knows he can force George W. Bush to spend three or four million dollars in Florida to assure his defeat of Gore there. I can't believe he picks such a non-issue to break with his boss and show his independence. He comes off as the guy who will say anything to win and loses credibility on the issues which are really important to him and on which he has good ideas.

Of course the federal government can't send marshals down to Miami to take the child from the home, it would be a public relations nightmare. It is unfortunate that this has come down to issues of PR and not the legal rights of a parent. Send this kid back to Cuba with his father so we can get back to more important issues.

E-harassment

Superfluous emails a great annoyance

By Kristen Jancuk

After a hectic day of class, various meetings and the quest for the perfect schedule (a never-ending cycle of choosing and re-choosing classes, as the closed course list each day rivals War and Peace in length) I returned to my room today and, being the computer-addict that I am, immediately checked my email.

The melodious voice in my computer announcing "You've got mail!" lifted my mood as I anticipated updates on my friends' lives, cheery message from my family and my "Dawson's Creek Newsletter" telling me about the new episode. My hopes were soon dashed to the ground and smushed like the worms that litter the sidewalk when it rains here. I had 13 campus e-mails, ten stupid forwards and six junk e-mails. Yippie.

Some forwards are acceptable, in my book: surveys, jokes, interesting websites and the like. What amazes me is the number of pointless e-mails people insist on passing around. Do you honestly believe that Bill Gates is testing his new 'e-mail tracker' and will send you an exorbitant amount of money because you sent his e-mail to 200 of your closest friends? I truly admire your devotion to the starving child with cancer of the spleen in northern Botswana, but I feel worse for you than for him, because you're that gullible. And I promise, your wish will not come true if you forward that poem about friendship, love or how evil boys are to your nearest and dearest. Trust me.

I do not know how every Internet business out there got my e-mail address, but if I find out I will work out a suitable punishment for the perpetrators. At least once a day I get e-mail from a credit card company that for some reason thinks I will actually accept their card, which has a $100 annual fee and APR of about 30%. Right. If I had $100 I would spend it on something useful, not your credit card that in the long run will plunge me into debt and steal what little money I have away from me.

And as if it's not bad enough getting a J. Crew catalog in my mailbox every other week, J. Crew has hunted me down on the Internet in order to drive me to the brink of insanity with their monthly sales and clearances e-mails, in HTML format, no less. Please, I beg of you, leave me alone. I don't even wear J Crew.

However, my favorite e-mails must be the ones that offer you 'freebies.' Don't be fooled. I learned quickly that 'freebie' means that if I buy $100.00 worth of overpriced merchandise from Pencils 'R' Us.com, they will give me a $5.00 rebate, a beanie baby, a free e-mail address (What good is that? I obviously already have an e-mail address if you're sending me this ludicrous offer!) or something equally disappointing. What worries me is that people may actually be buying into these offers, tricked into believing that they're getting an amazing deal.

There's not much to be said about campus e-mails. In theory, they're a good idea. Organizations and professors can reach the entire community simultaneously and e-mails help to decrease the massive amount of paper used on campus. However, the e-mails aren't very effective when you delete them immediately. Admit it, how many of you delete all e-mails that say 'students' right away? The reality is that these well-intentioned e-mails are ignored more often than not because of the seemingly endless stream of them.

What Bill Gates should really be working on, now that he's done with that 'e-mail tracker,' is an e-mail censor. Offer from an obscure worthless Internet company? Delete. Tasteless forward from a friend? Auto reply with nasty e-mail and delete. Six billionth e-mail about the upcoming Nuclear Physics lecture? Don't even allow it in my inbox.

Great Britain's immigration laws unfair

By Gretchen Schrock

The world's popular perception in recent years of Europe has been that the European continent has finally learned the lesson of tolerance and has taken the responsibility of ensuring the rights of minorities and other persecuted peoples. This notion has been reinforced by the involvement of many countries in the war in Kosovo to protect the well being of an ethnic minority against a ruthless dictator.

However, that perception just received a blow on Monday, Apr. 3, when a new immigration law went into effect in Great Britain making the country less attractive to asylum seekers.

Under this harsh law, those seeking asylum from totalitarian regimes, dictatorships or outright discrimination will receive vouchers redeemable for goods worth about $58 per person per week instead of cash welfare benefits. This amount, equaling $3016 per person per year, is not enough to allow a modestly comfortable life and will certainly throw the beneficiaries into poverty, but will protect the State from huge costs.

In addition, asylum seekers without a place to reside will be sent to one of 13 designated areas around Britain, instead of being able to settle wherever they choose. Most of these areas are quite a distance from refugee support networks. Does this sound like another form of discrimination, limiting the physical freedom and movement of the asylum seekers and setting them apart from large sections of British society?

Other aspects of the law are the closure of most avenues for appeal for rejected applicants and the imposition of steep penalties for drivers caught with foreign stowaways in their cargo trucks. The former provision opens the possibility of those in dire need of asylum being rejected with no hope of an appeal to save them from returning to their oppressive homeland.

The prevalent public opinion is that asylum seekers are taking advantage of Britain's generosity and do not have legitimate asylum claims. What exactly is a legitimate claim? The Afghans who applied to the British government for asylum after hijacking a plane and diverting it to Britain in February were immediately denied asylum without the recognition of the fact that they came from one of the most oppressive regimes in the world.

How about the plight of the Roma, otherwise known as the Gypsies? Intolerance, open discrimination and police brutality, directed towards these stateless people is on the rise, especially in post-Communist central and Eastern Europe. Despite the fact that half a million Roma died in the Holocaust, which the Roma call "the devouring," they remain one of the few people that it is largely acceptable to persecute.

Their traditionally nomadic culture that stresses the sacredness of their own traditions in opposition to those of the outside world combined with discrimination produce a never-ending cycle of poverty, illiteracy, poor health, and unemployment that further fuel prejudice.

All of these factors contribute to high crime rates and isolation among the Roma. Seen as "alien, thieving sub-humans with no allegiance to their countries or their laws," most Roma decide to flee to other countries.

"The Roma have no reason to stay where they live," said Claude Cahn of the European Human Rights Center, an independent foundation based in Budapest. "They are excluded from employment. Their housing is appalling. They are hated. Their schooling will get them nowhere. They are not components of the societies in which they exist. But Western Europe deports them back. They are what the Nazis called *luftmenschen*, people of the air, and it's hard to know on what they live."

An increase in the number of Gypsies begging in the streets of London has produced the desire in the government to accelerate the applications for asylum of the Roma women caught begging with children, with the idea of expelling them from the country as soon as possible. Obviously, the British government does not see their plight as a legitimate reason for seeking protection nor does it care to investigate the situation.

The British law follows a stream of sentiment already flowing through much of the European continent. Germany enacted a similar law a couple of years ago, while Austria, before the arrival of Jorg Haider's Freedom Party into the new government, severely restricted its formerly liberal asylum and immigration policy. Switzerland, Italy, the Netherlands, and a host of other countries have already passed or are considering further restrictive laws.

Where do all of these legislative acts leave people in need of a safe haven from the despair of their homelands? These acts place them back into the discrimination, oppression, poverty, destitution and hopelessness that they so desperately wanted to leave and forget.

Europe is turning a blind eye with this immigration legislation, forgetting the people and the problems, while retaining the illusion that it is concerned about the rights of minorities and other oppressed peoples. Yet, the response by Great Britain and other countries to the awful situation of the Roma nation contradicts the widely held belief.

By dispelling the issues from the minds of the world's leaders, no remedy can be even considered, allowing the inhumanity to unfortunately continue until finally certain nations or their cultures cease to exist. Esmeralda, cry and plea for your people, but no governmental figure is listening.

FEATURES

Celebrated doctor Patch Adams to captivate audiences once again

Courtesy of Ben Stechschulte

Patch Adams uses his silliness and unique humor to entertain a University employee on her break in the Bostwick Cafeteria.

Courtesy of Ben Stechschulte

The doctor shows his inner child as he performs his act for a group of children using his famous fish prop.

By Katie Hays

At first glance, you notice his apparel; you focus on his red rubber nose or his duck cap. But when he begins to speak, his manner captivates you. Hunter "Patch" Adams, the world-famous medical doctor, professional clown, and "radical thinker"—who recently inspired a major motion picture—changes lives. He will arrive on campus this coming week, and is scheduled to speak to audiences in Rooke Chapel at 7 p.m., Thursday, Apr. 13.

You may have seen Patch Adams portrayed by Robin Williams in the recent movie that bears his name. *Patch Adams* traces Adams' life story from his mental hospital-prompted epiphany to his subsequent dream of founding a free medical service that would care both medically and emotionally for its patients. Unconventional, offbeat and quick-witted, Adams is far more provocative than the Robin Williams portrayal. Living with passion, acting with spontaneity, and swimming in pools of noodles, Adams is intelligent and caring both as a speaker and in everyday life.

This Thursday will not be Adams' first visit the University, notes the Student Health Center's Dr. Donald Stechschulte. In 1994, Stechschulte read an article about Patch in a newspaper and, after many phone conversations and negotiations with the University, contacted Patch, who spoke on campus in 1996.

"Adams was engaged with people around campus for sixty of the seventy-two hours that he spent here. He's more than just a speaker; he showed up in classes, joked with students in their dorms, and entertained patients in the hospitals. He stayed up all night for two nights talking and interacting with students," Stechschulte recalled.

Courtesy of Ben Stechschulte

The doctor is in: Patch Adams in his typical garb

Before Adams' last visit, Stechschulte called his son Ben, a professional photographer, and invited him to attend. "My son photographed Patch and, as a result of the visit, the two became very good friends," Stechschulte said. "Ben traveled with Adams, photographing him along his travels to Russia, Bosnia, and Sarajevo, and published the photos in magazines. According to my son, Adams is 'the real thing'—both in public and private, his energy is contagious."

Adams wasn't always so joyful. Two ulcers and several attempted suicides as a teenager led him to commit himself to a mental hospital. It was there, prompted by his roommate, that he had an epiphany—he wanted to help people.

"The most revolutionary act you can commit in our society today is to be happy; if you really want to change the world, then ... be your own focus for a celebration of life and let it be known, whatever it is that gives you that happiness," Adams has said. "Then, pursue your dreams ... Your way of saying thank you is to serve, to say, 'Okay, I'm in the picture, what can I do?'"

For Adams, "what he could do" was make people laugh. He also campaigned for free health care and healing through a combination of medical attention and friendships with patients.

"Patch has a miraculous way with people," Stechschulte said. "Clad in a striped and gaudy clown costume, he once stood on a street corner in Sarajevo and wailed. People laughed at him; he held an enormous pacifier, and they raised it to his lips to stop his 'crying.' He heals through humor."

On the subject of Adams, Stechschulte is adamant: "He is amazing. When he talks about medical practice and life, he's not talking in abstract theories. He doesn't say, 'We might try this.' He says, 'We did it. This is what happened.' That message changes people; when they meet him, they recall some energy that they've always seen in themselves, and Adams revitalizes it. Patch has that power on people."

As a world traveler and a "spokesman for humanity," Adams has visited and spread his message to nearly every continent. In one interview, he humorously revealed, "The mental hospital helped me to get on track. When I realized the staff was as sick as the patients, I checked myself out, started reading about the lives of people who have changed the world, and figured I could do that."

Adams changes people through loving life. His message is simple—in one interview, he advised, "Fundamentally, at the very core of your being, be thankful you're alive, that you've got this opportunity with these molecules at this moment. Be thankful that you are alive and then look around and see who else is at the party."

One recognizes the implications of his words; the "party" of which he speaks is not only in Rooke Chapel; after an evening with Adams, it is everywhere.

Patch Adams will speak at Rooke Chapel, Apr. 13 at 7 p.m.. For tickets ($5), please contact the LC Box Office or Student Health Center.

Information for this article has been obtained in part from "An Interview with Doctor Patch Adams" Caring People, 1993 and from "Doctors Who Volunteer," Diversion Magazine, April 15, 1998.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

I know on this campus a lot of people spend time on their Computers, using Instant Messenger, listening to MP3s and many other activities. I am probably one of the few people on this campus that does not have a computer. Therefore, I can't really say that I am into that whole computer scene. However, my roommate is. In all honesty, I swear that you cannot drag that girl away from her computer. While I have no problem with her apparent computer addiction, recently she has been saying some things that really worry me.

First off let me tell you that my roommate is a risqué type of person. When she started talking about making a web page, I was like, "Ok, sure, a lot of people have web pages and think it's fun." However, then she started talking about how she could have pictures of her, a bio, and pictures of her friends from Bucknell and things like that. Needless to say I started to get a little worried, mainly because I know her and I know that she is probably planning to do something crazy with her homepage.

Should I confront my friend and tell her that I really don't think creating a homepage would be a good idea? Or should I just let it slide and let her make her own mistakes? I am not sure what she is going to do with the whole idea, but I just have this feeling inside me that some bad things are going to happen.

So I ask you, how do I tell my friend these feelings that I have without her blowing up in my face? I could be wrong. At least I hope I am.

Sincerely,
Homepage Hassles

Dear Homepage Hassles,

While I think that it is noble for you to look out for the well being of your friend, I don't think it's your place to tell her what and what not to do. While I can see that creating a somewhat risqué homepage probably isn't the best thing to do, nevertheless it is her decision. The fact of the matter is that you have no idea what kind of activities would arise out of her creating a homepage.

In addition, to pass judgement on her and assume that she would create such a page simply based upon her personality is a lack of insight on your part. For all you know she could be creating a new page as a tribute to her friends. However, if you wish to confront your friend there are a variety of ways in which you could do so.

First off, I think that you should examine the reasoning behind your feelings; are they personal vendettas or are you a truly caring friend? However, if you want to tell your friend how you feel I would do so in an indirect way. Ask her what is going to be on the page and why she wants to make one.

The other approach is to tell her how you feel. While this may not be the easiest thing to do, it is direct and to the point. Additionally, you have to realize that you friend could be somewhat offended no matter how you pose the question-try and make her realize that you were just looking out for her.

Lastly, you need to realize that you and your friend may have different views on what is acceptable and what is not. She may feel that creating such a web page is perfectly acceptable and a way of expressing herself.

I think it is great that you care so much about the well being of your friend, but don't let your feelings get in the way of letting her choose her own path in life. As Third Eye Blind Says, "I want something to get me through this semi-charmed kind of life." Until next time relax, have fun and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. Questions or comments can be sent to Eli Winkler at box C2815, attn: Wink Thinks.

Please note that Wink Thinks is meant to be instructional as well as entertaining. However, it is in no way a substitute for professional counseling.

Shrivastava takes long road to management department

By Katie Hays

There is life after engineering—just ask Paul Shrivastava, an engineering major who, after earning his undergraduate degree in the subject, desired a different profession.

Now a management professor at Bucknell, Shrivastava can speak of his past and present with ease. A professor at the University since 1989, Shrivastava's history and motivation provides us with a glimpse of more than one man; he has seen the world.

"New digital technologies and dot-coms are changing our economic language. Students need to learn that language and adapt to these technologies in order to succeed in the future..."

Born in India, Shrivastava lived and attended school there for the first 27 years of his life. From the quiet comfort of his office, he described the time when he was forced to decide his career path at a very early age.

"Children could take the math or biology track in middle school," Shrivastava said. "Culturally, most boys in India were pushed to take the math track and later, to graduate and attend engineering school. I did what was expected of me."

Despite his successful pursuit of the engineering track from middle school through the university, Shrivastava admitted that his interests lay elsewhere. He decided to do something about it.

"Soon after earning my undergraduate degree in mechanical engineering," Shrivastava said, "I decided that I didn't want to be an engineer."

Resolute in his decision, Shrivastava turned from his "destined" career path to earning a MBA in management at the India Institute of Management, Calcutta.

Upon graduation he helped to found Hindustan Computers Ltd. along with a few others. After working there for three years, Shrivastava moved to the U.S. and earned his Ph.D. at the University of Pittsburgh. He taught at Stern School of Business before coming to the University.

Shrivastava describes his favorite aspect of working with students to be getting involved in student projects.

"In one course, students assess and evaluate Web info, create a business plan for Web-based businesses and build web sites. Many students create extremely well planned and exciting sites; it is very rewarding to see them develop sophisticated Web skills," Shrivastava said.

Like the majority of professors, Shrivastava does not just teach. After writing and/or editing thirteen books and over 150 journal articles on topics ranging from management strategy and environmental management (how to make businesses both profitable and ecologically sustainable), to Internet-based education (how to enrich classes through Internet use), Shrivastava is now the second leading author cited in business strategy and the environmental journals, according to a recent study by three Scandinavian professors.

In Shrivastava's office, one notices more than books and journals. A bright orange Japanese tiger sculpture crouches on the windowsill, and a soft colored rug lies across the floor.

Shrivastava recently spent a year in Japan. While there, he acquired the tiger sculpture, he said, as his two young children acquired the language. "They learned to speak Japanese far better than I did," Shrivastava said, smiling.

Shrivastava enjoys international travelling, especially with his family, which includes his two children. Claudia, 11 and Kyle, nearly 10. Musicians rather than managers, Claudia plays the bass and Kyle the violin. "I don't play, but I listen," Shrivastava said.

Courtesy of www.bucknell.edu

Management Professor Paul Shrivastava

Shrivastava "listens" not only to his family but also to his students. When planning a new class, he made sure to take into consideration not only what he wanted but also what the students would like.

He describes his idea for a new class at the University:; "New digital technologies and dot coms are changing our economic language. Students need to learn that language and adapt to these technologies, in order to succeed in the future. In a new class that I'm currently contemplating, students would create a dot com company. They would also make rigorous business plans and create web sites of what their businesses would look like. The class would combine financial analysis with technical program work," Shrivastava said.

Shrivastava knows about creating and planning; his life itself a testament to his knowledge.

Despite beginning life following a culturally-determined path, he has since planned his own way; he travels, teaches, and writes, commenting on his own life with a smile and a peaceful nod. Shrivastava says, "There is life after engineering."

FEATURES

An abroad (?) perspective: Lewisburg, PA

Matthew Trunnell—The Bucknellian

Monica Montgomery '01 stands proudly outside her favorite American watering hole, the Bull Run Inn.

By Monica Montgomery

No need to read the title over again—you read it correctly the first time—I am studying abroad in Lewisburg, Penn.

More people than you may think travel abroad to the United States to learn at institutions such as Bucknell. There are nearly 150 international students on campus this year, from 53 countries. And depending on your definition of "abroad," unless you went to Lewisburg Area High School, you too are studying abroad.

I have lived just outside of London, England for the last 11 years, and while many people may disagree with the fact that I'm not really British, I'm not truly American, either. Coming to America, especially central Pennsylvania, was quite a culture shock.

Stores are not only open Sunday, but also 24 hours! I get more than four channels on my TV? Whoo hoo! Compared to the 17.5 percent sales tax at home, six percent is nothing. And gas prices are under $5.00! (That's another story.)

It is not the materialistic things that I love. The countryside, mountains and parks are beautiful and well-kept. The town of Lewisburg is very quaint. Walking down Market Street just before dusk when the green antique street lights start to come on is something not to be missed.

This part of central Pennsylvania offers vast parks for camping and hiking. Ricket's Glenn and RB Winter State Park are two that are within 30 minutes of campus. The Little League Museum is just up the road in Williamsport. And I bet that you didn't know Thomas Edison lived in Sunbury.

I get upset when people badmouth Lewisburg. I live here. I pay taxes here (not that I like paying taxes, ask any of my friends). I spend my breaks either here or traveling around the United States.

The biggest culture shock that I experienced was drinking. At home, drinking with friends was a social occasion. We went to the pubs, sat around and had a good time over a few drinks. Before graduating, I attended a mandatory meeting for all seniors that were attending college in the United States. In regards to drinking, they told us that it was "basically guzzling beer in the basement." I laughed and thought, "that stuff doesn't happen anymore!"

And then I came to Bucknell.

I also had problems adjusting to writing. My first year, my professors marked me wrong for spelling practically every other word! Words such as "harbour," "favourite" and "colour" are all spelled with a "u." I spell words that end in "-ize" with an "s," such as "socialise." It took a bit of practice to learn to spell again.

Every once in a while, I let a British word slip out. It usually happens when I'm mad (you can figure out what word it is). More often than not, I can't think of the "American" term for something. I remember my sophomore year when I was giving banking advice to a friend. I was saying that if she wasn't going to use her money, that she should put it into a building society. A what? It took me three weeks to figure out that a building society was a securities bank.

I have felt homesick for London a few times over the last three years. Usually during movies when they show a London street, I feel a twinge of nostalgia. And while I long for the busy streets and nightlife of London, the peaceful quiet of Lewisburg is a great substitute home.

Matthew Trunnell—The Bucknellian

Monica displays her patriotism outside of the Campus Theater.

Through the years: A look at the history of baseball

Over the past century and a half, major league baseball has developed into one of the world's favorite pastimes

By Rebecca Rowland

With the 2000 major league baseball season officially underway as of Monday, the boys of summer are upon us. Some things have changed since last year (Ken Griffey Jr. a Red?), others have not (the Yanks won ... again). But as sure as Mom and apple pie, baseball is an American institution with a rich history. In honor of the first baseball season of the new millennium, let's take a look at baseball from past to present.

Baseball is based on the English stick-and-ball game called "rounders." It began to gain popularity in the early 19th century and around that time many small towns began to form teams while larger cities formed "clubs." In 1845, a man by the name of Alexander Cartwright wanted to create a list of formalized rules so that each team played the same game-it was the creation of this uniformity that allowed the first baseball contest to take place in 1846; Cartwright's team, the Knickerbockers (a name now used in the NBA for the New York Knicks) were defeated by the New York Baseball Club at Elysian Fields in Hoboken, N.J.

While the Civil War disrupted play of the newly created National Association of Base Ball Players, the Union soldiers took the game with them to many different parts of the country. The league quickly expanded to over 100 teams by 1868. As the league grew so did the expenses of running a team. Fans were charged for admission and many teams contracted sponsors.

The first team to become truly professional and pay their players was the Cincinnati Red Stockings. They won every game in 1869 and the idea of paid players caught on. In 1871 the National Association became the first professional league.

A competitor, the American Association, was formed and began to lower ticket prices in an attempt to attract fans from the National League. Rather than fight, the two leagues reached a compromise and agreed to compete with each other only on the field. This rivalry is manifested today in the form of the All-Star Game.

The National Association quickly fell to ruin due to the presence of gambling and alcohol at the games. From its ashes rose the National League and with the American Association, set contract, schedule and ticket price standards. They also prevented players from changing teams with something called the Reverse Clause; this clause enraged the players causing many to leave to join the Union League in 1884. The league folded after one season, as did its offspring, the Player's League.

With the discontinuation of the Player's League came the end of the American Association; many of its players chose to return to National League teams for better contracts and pay. Here, too, we see the historical beginnings of modern-day baseball problems: money and contracts.

In 1901 the American League was formed, as was a 3-man baseball commission to rule the two leagues. Baseball had finally reached its permanent structure. In the early 1900s and again in the '60s third leagues sued to join baseball but the Federal League in 1914 and the Continental League in 1960 could not break the tradition. In response to the demands of the Continental League, however, the American and National leagues expanded from 16 to 24 teams. At present there are 14 teams in the American League and 16 in the National League, including still the Cincinnati Red Stockings or Reds as they are called today.

Baseball has soared under Ty Cobb, Babe Ruth, Jackie Robinson and Cal Ripken Jr. just as it has suffered low points with labor battles throughout the last half of the 20th century, Pete Rose and gambling and the '94-'96 contract fiasco that cancelled the World Series.

Baseball is more than a game to Americans, it is a defining point in our culture. Just watch "Field of Dreams," "Bull Durham," "A League of Their Own," "Angels in the Outfield," any of the "Major League" films or even "Rookie of the Year" and you will see to what extent baseball has captured our imagination.

Despite its American roots, baseball is now going global. The recent pre-season series in Japan is just one example of this trend; players like Sammy Sosa show their countrymen that baseball can be the Dominican, or Venezuelan, or even Japanese pasttime. It should be a point of pride to all Americans that their sport(that they have stuck by through thick and thin) has gone on to capture not only the imagination of their own country but that of the world.

Campus events schedule

With only four more weeks of class many students are tempted to put their brains on cruise control and spend their time counting the minutes until summer vacation.

Stop! Many interesting and entertaining events will be held on campus during the month of April; don't think of the rest of the school year as a race to the finish line but as the opportunity to have one more month to explore the many options the University has to offer.

Here are a some events that shouldn't be missed:

April 7, 2000
Theatre—The Baltimore Waltz"
Director-Cassandra Pisieczko '00
Tustin Studio Theatre,8pm, $5 (April 7-10)

Film—"Early Spring"
Directed by Yasujiro Ozu
Vaughan Lit. Aud., 4:30, 8:30

Concert—"Chipfest 2000"
Bison Chips
Weis Center, 8pm

April 8, 2000
Concert—BU Orchestra
Christopher Para, conductor
Weis Center, 8pm

April 9, 2000
Concert—BU Symphonic Band
William Kenny, conductor
Weis Center, 2:30

April 11, 2000
Poetry Reading—Celeste Holm
Selections from Irish literature
Bucknell Hall, 7:30

April 12, 2000
Social Science colloquium—"Area Studies and the Disciplines"
Robert Bates, Harvard Univ.
Gallery Theatre, 7:30

April 13, 2000
Recital—Marissa Luciani '00
Soprano
Bucknell Hall, 8pm

Lecture—"Follow Your Dreams"
Hunter "Patch" Adams
Rooke Chapel, 7pm, $5

April 14, 2000
Concert—"Celluloid Copland"
Eos Orchestra, performing
Weis Center, 8pm, $20

Film—"Amateur"
Hal Hartley, director
Vaughan Lit. Aud., 4:30, 8:30

April 25, 2000
Concert—BU Concert Chorale
William Payn, conductor
Weis Center, 8pm

April 16, 2000
Recital—Alexandria Shamma '01
Soprano
Christopher Halldorson '01
Tenor
Bucknell Hall, 8pm

April 18, 2000
Recital—Matthew Morrow '02
Piano
Bucknell Hall, 8pm

Lecture—"Likeness and Presence in American Culture"
Dave Hickey, University of Nevada, Las Vegas
Gardner Lecture Hall, 7:30

April 20, 2000
Recital—Erik Ralph '00, bass
Alissa Yatcko '01, soprano
Mollie Martin '02, mezzo-soprano
Bucknell Hall, 8pm

April 21, 2000
Poetry 22nd Annual Bucknell Poetry Festival
Guest Poets
Bucknell Hall, 8pm

Film—"Sullivan's Travels"
Preston Sturges, director
Vaughan Literature Auditorium, 4:30, 8:30

April 22, 2000
Poetry—Poetry Fest. (Cont'd)
Workshop 9am
-Open Reading 10:30
-Guest Reading 2pm
-"West Branch" Reading 4pm
Bucknell Hall

April 24, 2000
Recital—Elizabeth Asti '00
Mezzo-soprano
Bucknell Hall, 8pm

April 26, 2000
Forum—"Moral Grounds and Plural Cultures: Perspective on Human Rights and the Global Community"
Sumner B. Twiss, Brown Univ.
Walls Lounge, noon

April 28, 2000
Film—"Insignificance"
Directed by Nicholas Roeg
Vaughan Lit. Aud. 4:30, 8:30

April 29, 2000
Concert—Rooke Chapel Ringers
William Payn, conductor
Rooke Chapel, 8pm

April 30, 2000
Concert—Rooke Chapel Choir
William Payn, conductor
Rooke Chapel, 8pm

Compiled by Rebecca Rowland '02

Arts & Entertainment

University holds 1st annual invitational poetry slam

By Laran Brindle

An enthusiastic audience packed the Bison last Wednesday night as words of poetry filled the air. The crowd was remarkably engaged and responsive, erupting in cheers, boos and the occasional gasps. The first ever poetry slam was officially a success.

Paige Cull—The Bucknellian

Jessica Jackley '00 reads for judges and audience.

Poetry slamming uniquely brings together the world of competitive sports and literature to create a hybrid breed of poetry not native to our classic English textbooks. Slam poetry originated in the mid-1980's in a Chicago saloon to liven up the art and bring it back to a popular audience.

The participants, as in any competition, needed a bit of a warm-up. The first hour of the event was an open mike where many University students, among others, read their original poetic pieces.

Presentation of the poems varied along with topics and genres of the poems. There were individual and group pieces, funny, serious, witty and ridiculous. There were poets who read solemnly and those who performed with hand gestures, facial expressions and voice changes. At eight o'clock the judges were introduced and the poetry slam began. Of course there is no one better to explain a poetry slam than the professional "slammers" themselves who were the honored guests of the event.

Cheryl B., Alix Olson and Regie Cabico mediated the poetry slam as they shared their own poetry and personalized slamming techniques. Their senses of humor and dramatic energy kept both the crowd and the poets on the edge of their seats.

Cabico was the evening's Master or Ceremonies and kept the audience laughing in between poems. In order to simulate a true poetry slam the Bison was outfitted with a sound-system, lights and even a smoke machine to add to the event.

Paige Cull—The Bucknellian

Peg Cronin of Writing Center reads poem of choice during slam.

Because of the expository nature of the poems, the topics tend to be political, opinion driven and emotional. Unlike a romantic, stereotyped view of poetry, poems in a slam can be controversial and do not shy away from harsh language or content. The point of a poetry slam is to make a poem come alive for an audience, to perform the art of poetry.

The three slam teams — Denny's Grand Slam Breakfast, Where Neon Goes to Die, and The Mirth Grinder — were each composed of four University students and were scored by five judges in the audience. The scoring ranged from one to ten.

Paige Cull—The Bucknellian

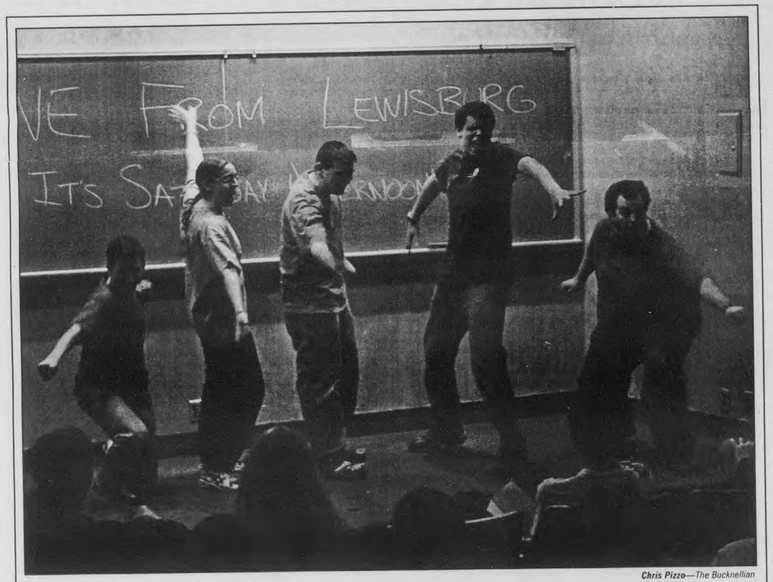
Alix Olson, a guest slammer, helped to introduce the event to the campus by sharing her own poetry slamming techiniques.

According to poetry professional Regie Cabico, a score of a one meant "the poem should have never been written" and a ten meant "orgasm."

Using these guidelines each team received a score for their representative poem of the round. All within close score range, Where Neon Goes to Die took first place. Even though the slam induced a competitive atmosphere where fans sometimes booed in disagreement with the judges and cheered for their favorites, the general mood for all was fun.

Stephanie Saylor '00, a poet for Denny's Grand Slam Breakfast, expressed her sentiments about the first ever Poetry Slam, "Poetry is not usually a contest, so it was a little strange to compete in a reading. To collaborate with a team in the writing and reading of a poem is a unique opportunity. I was very nervous about being judged, but the spirit of the event was supportive and fun. I hope this becomes an annual event."

University faculty, Mark Svenvold, a visiting professor of English and Michael Carlin worked to organize the Poetry Slam and attract both the amateur and professional slammers. The interest and energy level of such an event hopefully provides inspiration and motivation to all poets — and perhaps brings promise of more University slammers for a second Invitational Poetry Slam.



Chris Pizzo—The Bucknellian

Kicking off their tour of the dorms, We Brake For Nobody, a campus improv group, performed in the Gallery Theatre this past Saturday afternoon. The group's performance raised money for Bucknell in Burma.

University hosts visiting artist, Kelli Kiyoma Kadokawa

By Anna Shaw

The Bucknell Craft Center is pleased to announce that it will host Kelli Kiyomi Kadokawa as its Visiting Artist for the Spring 2000 semester. Ms.Kadokawa is a diverse artist currently residing in Madison, WI, where she concentrates on teaching and creating her own art.

Her sculpture, furniture and two-dimensional works are produced in a variety of media, including wood, metal, paper, clay, and calligraphy.

Kadokawa recently earned her Master of Fine Arts degree from the

University of Wisconsin at Madison where she studied with internationally acclaimed furniture artist, Tom Loeser.

Her work, which often incorporates personal and narrative themes, has been exhibited in several prestigious galleries and museums nationally. These venues include the Renwick Gallery in Washington, D.C., the Madison Children's Museum in Madison, theEvanston Art Center in Evanston, IL and the Society of Arts and Crafts in Boston, MA.

Kadokawa was raised in Hawaii and spent summers in California where she was encouraged to explore her own creativity. Piano lessons, gardening, haiku writing, sewing, drawing, and occasional mud pie-making were amongst her favorite pasttimes and served as an informal foundation for her later education.

Despite her early intrigue with the arts, it was not until college that Kadokawa realized her desire to pursue a degree in this field. Her self-inspiration led her to San Diego State University, where she received a BA in applied design. In 1999, she earned her MFA from The University of Wisconsin-Madison.

"For me, art is a means of telling a story; it is a vital form of communication as well as an important aspect of life. It is my intent to be one of these storytellers. My ideas are not confined to furniture making; I am also exploring form and narrative," Karokawa said. "My work isstill intuitive, my aesthetic both awkward and sophisticated."

Karokawa's current undertakings, involving sculptural work and furniture, communicate her interestin "human characteristics, personalities and idiosyncracies."

The artist will give a slide presentation and lecture on her work and influences on Friday, Apr. 7 from 7:00-8:30pm in the Gallery Theatre of the Langone Center. The lecture is free and open to the public.

Karokawa will also be presentinga hands-on workshop at the CraftCenter entitled "Lamps, Lamps, Lamps" on April 7-8, Saturday from 10:00am-6:00 pm and Sunday from 10:00am- 2:00 pm. Students enrolled in the workshop will create handmade table-lamps while working along withthe artist in a small classroom se tting. Spaces are still available for theworkshop. Pre-registration and a $60 fee is required which includes the cost of materials.

For further information, contact the Craft Center or see the Visiting Artist section of their website:http://www.departments.bucknell.edu/crafts/.

Britain's Fitzwilliam String Quartet comes to University

The music department at the University will host a weeklong residency by Britian's Fitzwilliam String Quartet March 26 to April 4. In addition to classes and workshops at Bucknell, the quartet will perform three public concerts on campus and will spend a day in the Milton public schools. All of the Bucknell concerts are open to the public without charge.

On Sunday April 2 at 7:30 p.m. in Rooke Chapel, the quartet will perform Josef Haydn's unique set of sonatas on the "Seven Last Words of Christ" with James Hammerlee, guest narrator. This unusual work was composed by Haydn for Holy Week in Cadiz Cathedral in 1801. On Monday April 3, at 8 p.m. in Bucknell Hall, the quartet will perform an all-Mozart program, featuring Mozart's Quintet in G minor, K. 516, with guest violist Christopher Para; the Quartet for flute and strings, K. 285, with Mary Hannigan, guest flutish; and Mozart's Divertimento in D, K. 136.

Founded in England in 1968 by four Cambridge undergraduates, the Fitzwilliam String Quartet became well known internationally through a close association with the Russian composer, Dmitri Shostakovich, who entrusted them with the Western premieres of his last three quartets. The quartet enjoyed an affiliate residency at Bucknell from 1978 to 1986, and visits resumed with a return to the campus in 1998.

The quartet is composed of Lucy Russell and Jonathan Sparey, violins, Alan George, viola, and Daniel Yeadon, violoncello.

The residency is supported by the Bucknell Association for the Arts, the Kushell Music Endowment of Bucknell University, and the Office of the President. For more information concerning the concerts or class visits, call 570-577-1239.

Jazz Machine premieres at weekend performance

Dan Blair—The Bucknellian

Jazz Machine is composed of eighteen students, combining vocals and a jazz band.

By Jennie Scheerer

Visiting siblings and other members of the Bucknell community packed the Vaughn Literature Auditorium this past Saturday night to hear the talented voices of three of Bucknell's premiere musical groups, The Bucknell Jazz Machine, The Silhouettes, and Two Past Midnight.

The Silhouettes, the female *a capella* group and Two Past Midnight, the co-ed group, have been in existence for several years, while the Jazz Machine is a new addition to the collection of musical ensembles on campus. The Jazz Machine is composed of eighteen males and females and uniquely combines both singing voices and a jazz band.

Saturday night was the Jazz Machine's first performance anywhere; they sang "Tuxedo Junction" and "Blue Skies" along with the band, "Chili Con Carne" *a cappella* and the band played "25 or 6 to 4" by Chicago. The group was founded this year by Karen Dawes '02 and Laura Sassano '02.

"I was really excited about our debut performance and really nervous. But, it went very well and we all had a blast. I have heard nothing but positive things about the concert and I light up inside each time someone praises the group. It is so wonderful to see that my dream has become a reality!" Sassano said of their first performance.

Be sure to check the Jazz Machine's website on Bucknell's homepage for any upcoming performances. To hear more of Bucknell's musical talent, don't miss "Chipfest" this Friday night, the annual performance by The Bison Chips, the University's only all-male *a capella* group.

Baltimore Waltz hits the stage this weekend

By Katie Parker

"The Baltimore Waltz", a play under the direction of Cassandra Pisieczko('00), will be running this Friday, April 7 Monday, April 10 at the Tustin Studio Theatre.

The Baltimore Waltz" is an off-beat, moving play about a fantasy trip between a brother and a sister to Europe. It is based on real-life events, as author Paula Vogel's brother contracted HIV, and unbeknownst to Vogel, she missed her last chance to take a trip to Europe with him before he died.

The play is at times hilarious, at others inappropriate, but always filled with a fresh balance of humor and emotion. The only obvious difficulty with this play is it's sometimes quick and confusing tempo, switching from scene to scene and idea to idea. While this remains slightly puzzling even in hard print, it should be worthwhile to see how Pisieczko attacks the challenge of making it clear onstage.

One of the cast members, Courtenay Mastain '02 has full confidence in Pisieczko's vision, "Sandie's unique vision and manipulation of the script has created an especially challenging, but truly remarkable show." Mastain said. "The most rewarding aspect...has been working with an unbelievably talented cast. Each member of the cast and crew have so much to offer in terms of their knowledge of the theater, their professionalism, and their friendship."

Mastain called the cast a "very dynamic group of individuals," which they must be in order to pull off such a unique and challenging performance. Other cast members (from all walks of Bucknell life) include David Carpenter '00, Ann Bonner '00, Harlow Wetschler '02, John Mitchell '00, Danielle Yannece '02 and Ian McNaugher '01. Come see them perform, Friday through Monday, starting at 8 pm in the Tustin Studio Theatre. Tickets are on sale through the Bucknell Department of Theatre and Dance at the Langone Center Box office ($5 a piece).

Paige Cull—The Bucknellian

Ann Bonner '00 and David Carpenter '00 practice a scene in preparation for the opening performance.

Holm to give reading

Courtesy of Public Relations

Celeste Holm, along with Byram Stevens, will read a variety of Irish literature during their visit.

By Laran Brindle

Oscar award-winning actress Celeste Holm, along with Stawith St. Paul's and Yale Graduate Byram Stevens will give readings on Tuesday April 11th, at 7:30 p.m. in Bucknell Hall. St. Paul's and Yale graduate Byram Stevens. The evening will be filled with Irish literature, read with celebrity flair.

Holm won an Oscar for her performance *Gentleman's Agreement*. She was nominated for Academy Awards in the films *Come to Stable* and *All about Eve*. She has also starred in several television shows including "Falcon Crest" and "The Love Boat". The past three years Holm has starred in the CBS series "Promised Land" with Gerald McRaney. The well-established actress, Holm, made her 1939 Broadway debut in William Saroyan's Pulitzer Prize-winning play, "The Time of Your Life." Holm is active on the board of Actor's Fund of America where she has served as chair of the New Jersey Motion Picture and Television Commission.

Holm and Stevens will read poetry from treasured poets such as W.B. Yeats, James Joyce, William Goldsmith, Jonathan Swift, Samuel Beckett, Oscar Wild, Sean Casey, and Gerald Manley Hopkins among others. The event is open to the public without charge.

2nd annual Chrysalis Ball to be held.....

By Katy Zachry

Join the Bucknell Community by carrying on the tradition and "dancing through the decades" at the second annual Chrysalis Ball on Saturday, April 29th. Only weeks away, this black-tie optional gala will be host to students, faculty, staff, and alumni, and it promises to be an even more amazing event than it was last year.

The featured entertainment of the night is the reputable New York City band "Standing Room Only," and who will play a variety of music from the different decades ranging from the 1920s to the present.

Sponsored by T.O.K.E.N.S. (Themes Offered to Kreate and Enhance New Spirit) and the Bucknell Traditions Task Force, this long anticipated night will commence in the Bucknell Fieldhouse at 9 p.m. with delicious hors doeuvres and entertainment upon arrival and last until 1 a.m. with the sounds of DJ James.

The Chrysalis committee, designed for the sole purpose of planning this event, has been dedicated for many months to making this night a truly memorable one for all in attendance. Tickets, which have been on sale since March 29, cost fifteen dollars and can be purchased in the book store or LC Box Office.

For more information about the Chrysalis Ball, call the Office of Campus Activities and Programs at ext. 1217.

Gregg to make second reading at Stadler Center

By Nicole Gull

For so many of us, life is about following your bliss — doing what makes you most happy. This year's Poet in Residence at the University's Stadler Center for Poetry is a superb example of this objective.

Linda Gregg is an established poet and has been fortunate enough to wed both her art and profession in a most unique way. She has taught at the University of Iowa, Houston, Hawaii, Columbia University, and the University of California at Berkeley.

In addition to a strong career in teaching, Gregg has published five books and is expecting her latest to debut within the next year.

Now, Gregg has found herself here as a result of Cynthia Hogue's efforts. Hogue called Gregg and simply asked her to accept an invitation to write and work here at the University. The two got on extremely well and Gregg could not be happier with her experience at the poetry center.

"The Stadler Center for Poetry is a wonderful center. I only teach one class and so I am allowed a lot of my own time to write," Gregg said. "It is very difficult for an artist to make a living and continue to be an artist. I do not know of anywhere else that allows that."

Gregg feels as though she has been greatly affected by her years in California. She says that she has always been deeply connected to a sense of nature and the sacred.

At age thirteen, Gregg began to read poets like Emily Dickinson, William Shakespeare and John Donne. "I got it right away," she said. "Even before I could completely understand the poems, I understood I had made contact with something that included all of me—my life, my sense of mortality, love, the sacred, heart, soul and spirit."

Gregg considers herslef a lyric poet and said that she "writes from the inside out." "It was my talent to feel like I contained a poem," she said. "Also, I do not chase fashion or style. The poetry that matters most to me is often very old—Pounds Cantos, William Carlos Williams—poetry that has survived time."

Gregg also values this in her own poetry. She says her work has changed as her life has changed.

Her first book, she said, is characterized by a hopeful youth, while her most recent book contains "a deeper heart."

Linda Gregg will be giving a reading in Bucknell Hall this Wednesday evening at 8:00. All are welcome to listen, relax, and share in her work.

Christopher Sloan—The Bucknellian

Phi Kappa Psi held its annual "Battle of the Bands" on Saturday,Apr. 2nd. Six bands from local areas, as well as Susquehanna University and York, Penn., came to play, with "The Fabulous Boomsticks" voted the winner.
The brothers raised over $700 at the non-alcoholic event, with donations going to the Kidney Association of America.

Rebecca Sheinfeld—The Bucknellian

The 2nd annual Choreographer's Showcase took place on March 30-31. Both students and faculty choreographed and performed various dance pieces.

Steely Dan makes comeback with new album

By Campbell Gerrish

Steely Dan, after hibernating for twenty years, finally released *Two Against Nature* early this year. A favorite during the mid-seventies, Steely Dan has come back from the dead with a powerful new album.

This March I was dismayed to read a review from *The New Yorker* which went so far to say that the group was "never properly young, even in the seventies: indeed, Walter Becker and Donald Fagen, whom one would describe as Steely Dan's heart and soul were there any evidence that they were interested in either a heart or a soul, have always given the impression that middle age was wasted on the middle-aged."

This quote was written in reference to Steely Dan's approach to music and the sound on the new album. In my opinion, in *Two Against Nature* Steely Dan delivers a tight, funky and jazzy sound, full of heart and soul. I'll agree that a few of the tracks sound, as my friend Victoria said, "like elevator music." Unforunately that's the truth, but in between those there is some great good music.

Right from the start, "Gaslighting Abbie" starts the album off strong. It's a straight up solid funk song with a popping drum beat, some mellow electric piano, choppy guitar riffs, smooth rhythm guitar, and slinky bass. The chorus is very jazzy but does have a more contemporary sound to it. There are also many cool trade offs between the bass and guitar which make for a meaty groove.

Courtesy of steelydan.com

Don Fagen and Walter Becker of Steely Dan release their first studi album in twenty years.

Next on the album is "What a Shame About Me,"which is really smooth and soft jazzy. I can see the adult contemporary side of this song, but nevertheless the group gets a groove on. The chorus sounds like anything you'd hear off of Gaucho or Pretzel Logic — classic Steely.

The title song for the album, "Two Against Nature," has become one of my favorite Steely Dan songs ever. The bass line is mesmerizing, the piano throws in great accents, and the electric guitar plucks out some great riffs. It's a real swingy song, combining a latin beat with fuzzy guitar and jazzy horns. Fagen sounds as good as ever on the vocals and during the chorus he and his backup singers craft a delightful sound.

The last song that I thought would be appealing to a college audience is "Cousin Dupree." When I first put it on I said to myself, "this sounds a whole lot like the Doobie Brothers". It has a blue-grass feel mixed with pop - more blue grass on the bass, drums and guitar, more pop on the piano and vocals. There are some really great guitar solos by Becker and Fagen once again comes through on the vocals.

The rest of the album sways in and out of the "too old for us" category. Steely Dan gets a little too mellow, a little bizarre in places, and certainly shows some aged taste. As I said though, that's okay. *Two Against Nature* is completely a worthwhile album to purchase, especially if you are a Steely Dan fan. Becker and Fagen noted in a *Rolling Stone* interview that they felt the band put together for this album is the best they have ever played with. I couldn't agree more. The band is tight, the tunes are funky, and the two masterminds have done an incredibly job of preserving that tasty Steely Dan sound.

Symphonic band keeps busy with performances

By Julie Mason

The symphonic band performed on March 7, 2000, in the Weis Center for the 30th annual Evangelical Hospital Benefit. This concert was established 30 years ago in conjunction with the Lewisburg schools. There is no admission charged, but donations are requested for the Evangelical Hospital across route 15. This year, the concert raised over $6,000.

With concert material geared towards children, the band played a repertoire including several patriotic variations and an Andrew Lloyd Webber medley including excerpts from "Don't Cry for Me Argentina, "Memory" "Jesus Christ Superstar" and "King Herrod."

Director William Kenny appealed to the children in the audience, giving them a taste of what different aspects of music there were and how each instrument contributed to the performance of the group by asking the band to play sections of music first with and then without selected instruments.

This coming Sunday, April 9 the band can be seen in the Weis Center at 2:30 pm playing a program featuring marches by John Phillips Sousa. Guest solo cornet and xylophone players will also be featured. Admission is free.

SCIENCE & TECHNOLOGY

TECHNOLOGY EDITORIAL

If Microsoft lost, who won?

Now that Judge Thomas Penfield Jackson has ruled Microsoft a monopoly, consumers everywhere can rejoice! The war is over! No more Microsoft domination!

Well ... not really.

Even though Justice Department antitrust chief Joel Klein believes Tuesday's ruling is a great victory to consumers, the reality is that no one has won anything. At least, not yet.

The case dates back to 1990, when the Federal Trade Commission investigated whether there was collusion between Microsoft and IBM. Antitrust charges filed in 1994 concluded in a consent decree forbidding the software behemoth from using its dominance to hinder competition.

The current set of charges were brought to trial in Oct. 1998, alleging that Microsoft broke the 1994 decree by using its Windows monopoly to increase market share of its Internet Explorer browser over Netscape Navigator. Also alleged were Microsoft's predatory pricing schemes, where computer distributors like Gateway and Dell were given volume discounts on Windows only if they agreed to install IE and give preference to other Microsoft products. These allegations fell under the Sherman anti-trust acts.

Since then, Judge Jackson has issued his initial findings of fact, in Nov. 1999, and finally his conclusions of law last Tuesday. Jackson's position has been clear since November: Microsoft has a monopoly in the operating system market and they used it for anticompetitive practices.

We all knew Microsoft had a monopoly

November's judgment left many observers yawning with the latest ruling, declaring it a foregone conclusion. But the most interesting issues are yet to be debated; now that we know there is a monopoly, what are we going to do about it? Next on the agenda of the trial is the remedies phase, where Judge Jackson will decide what punishments are necessary.

James Barkdale, CEO of Netscape Communications, has had a hand in the initial hearings against Microsoft. As an outspoken opponent of the Redmond, Wash. firm, he firmly believes that Microsoft should be broken up into smaller companies.

While this position is the most extreme, it finds many supporters throughout the computer industry. Also possible are imposed fines or restricting Microsoft's behavior in the marketplace.

Ed Black, President of the Computer and Communications Industry Association and another vocal Microsoft critic, said that a breakup is the only conclusion that would end the company's "pattern of abuse."

Whatever the final outcome, most are glad that Microsoft's monopoly has been recognized.

"The bully of the schoolyard has been sent to the principal's office. We don't know yet what the principal is going to do, but all the other kids are breathing a sigh of relief," said Shawn King, host of a pro-Macintosh Internet radio show.

But will Microsoft be the bully that never gets punished, always weaseling out of the consequences? CEO Bill Gates could not help but smirk through the entire question and answer session with thinly veiled arrogance during the company's Tuesday press conference.

Microsoft may be overconfident

Gates and crew had their chance to end the trial last week during negotiations with the DOJ. But the differences "were too deep—seated to be bridged," said Judge Richard Posner, the appointed mediator in the settlement talks.

It is unclear which side was the most uncooperative. But considering Microsoft's haughty conduct earlier in the trial, one can easily guess.

The public relations messages that continue to spout out of Redmond, Wash. speak of Microsoft's commitment to innovation, increased benefits to consumers, and strong legal footing. It seems as though the company has a contingency plan for everything.

"As we look forward to the appeals process, innovation will continue to be the No. 1 priority at Microsoft," Gates said.

And looking forward to the appeals process is something Microsoft can do with ease. Gates' lawyers have had success in the appeals court in the past. In 1998, they were successful in overturning

Matthew Trunnell, S & T Editor

an injunction to allow the launch of Windows 98, while also gaining the ability to integrate new features into the OS (including the browser), according to *Wired News.*

In fact, Sullivan and Cromwell, Microsoft's law firm, is well known for its work in the appellant arena. Apparently, Gates has had his sights set on the appeals process for some time now.

However, this case is likely to end up in the hands of the Supreme Court, according to News.com. And betting on the success of repeated appeals is a risky game when the Supreme Court is involved, since the politics of that court are so disparate from the rest of the court system.

What will happen when the Sherman Act, put into law in 1890, clashes with the corporation most often associated with the whirlwind pace of modern technological change? Everyone seems to have an opinion about what remedy is best for our favorite monopoly, but judging from the smile on Bill Gates' face, consider it guaranteed that Microsoft's most clever moves are yet to come.

Ethics neglected in AIDS research study

US scientists used questionable practices in African study.

By Alex Piel

Research by American scientists has reached a new high or low in this case. Experiments that cannot be performed in the United States are being moved to developing countries where rules and cultures permit more flexible methodology and ethical consideration. A recent study in The New England Journal of Medicine (NEJM) has caused significant controversy among researchers and has instigated an intensive examination of the moral practices in foreign studies.

Jerome Groopman reports that in last month's issue of the NEJM, the results of a 4-year study on the spread of AIDS in more than 15,000 Ugandan people were published. Initially, there appears to be little problem with the study. Upon further investigation however, you will discover that the American researchers neglected to inform the infected patients of their disease while following the spread of the HIV virus. Consequently the virus was unknowingly spread from patients to their uninfected partners, and in the end, there were 90 newly infected Ugandans, all condemned to a desolate future.

The conclusions of the study were the more of the virus a person carries the more likely it will be transmitted. These results are hardly beneficial to a developing country with little access to effective medicine. Not surprisingly, the study does make considerable contributions to domestic treatment. Since its release, doctors have questioned how such studies in these developing countries can be morally justified, from any culture's perspective.

Proponents argue that this study allowed scientists to monitor the proliferation of AIDS to help prevent it in the future and also to determine if, and when, medicine is most needed. What others are asking, though, is how American researchers could supervise the progress of this fatal disease while uninfected patients became infected, day by day, for four years? What gives any group the right to observe the natural path of this deadly virus while simultaneously harming their subjects and benefiting themselves?

According to the leader of the study, Dr. Thomas Quinn of Johns Hopkins University, the experiment conformed to a high ethical standard. Quinn claims Ugandan authorities restricted him and his staff to confidentiality about who was infected. Quinn believed the study was ethical because of the care he and his staff provided for the infected patients. What he neglects to add, however, is that HIV infected patients were not fully treated. Though Johns Hopkins provided antibiotics for those patients with syphilis and gonorrhea, opponents argue that that medicine was merely a precaution to protect their researchers. HIV patients were cutoff from any medical aid after the study was completed.

It can be argued that before scientists and doctors can take steps to treating diseases, they must understand the disease's background, behavior and natural history. Though our knowledge of HIV and AIDS is broad, questions remain about its behavior in the earliest stages and how to treat the virus during these introductory periods. Some drugs are effective early, some later; consequently, the reason for such a study. A justifiable reason? Doubtful as most people today are examining the motives of the researchers and the subjects.

Under such circumstances, it is unclear why these patients would agree to be involved in the study. Apparently, patients were told that whatever treatment they received during the study would not necessarily continue after the researchers left Uganda. Opponents of the study, including the editor of The New England Journal of Medicine, Dr. Marcia Angell, insist the patients should have at least been given ongoing treatment for their voluntary participation.

The controversy surrounding this study runs deeper than merely a more thorough understanding of HIV behavior and treatment for this presently incurable disease. While we continue to drain funds for such research, scientists have once again bent ethical laws in search of revolutionary discovery. Whereas Dr. Quinn claims such a study is more ethical than those using other animals as subjects, in many ways his method and ethical ignorance have turned the Ugandans into the animals he wasn't provided in the United States.

There is a reason this experiment wasn't conducted domestically. That same reason applies universally, but apparently not Dr. Quinn.

Living, breathing, *thinking?*

Famous animal behaviorist Donald Griffin presents case

By Lynne Waldman

They walk (well, the majority of them), they "talk," but do they think?

Scientists have long decreed our fellow living, breathing members of the animal kingdom to be incapable of consciousness, a hallmark exclusive to Homo sapiens. Challenging this traditional view of animal awareness, animal behaviorist Donald R. Griffin presented numerous examples supporting animal consciousness during his talk Tuesday evening in the Langone Center Forum.

Invited to speak as the lecturer for the 1999-2000 Cummings Lecture in the History and Philosophy of Science, Griffin has authored many books advocating animal cognizance and actually discovered bat sonar in the 1940s.

Griffin began his many examples of animal consciousness by recounting behavioral studies involving the infamous horse Clever Hans. Initially, Clever Hans was a paradigm of animal intelligence. The horse appeared to be able to add any two numbers presented to him by his trainer. However, careful observation of the experimentation undermined Clever Hans' credibility.

It was discovered that the scientist unknowingly nodded his head as Clever Hans tapped out the "correct" numerical answer with his hoof. The horse simply stopped tapping when his trainer stopped nodding. The algebra lessons given to Clever Hans had failed to make him cognizant of addition and subtraction, delivering a serious blow to the issue of animal consciousness.

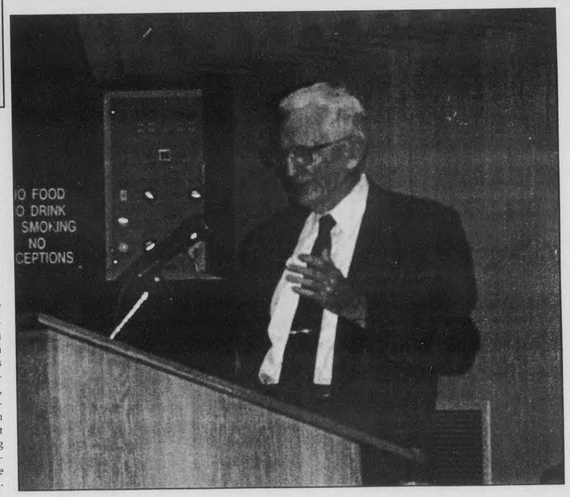
Although researchers cannot be unquestionably certain that animals share consciousness with us, Griffin's lecture gave students thought-provoking evidence supporting animal cognizance.

Despite this setback, proponents such as Griffin are not so quick to rule out the potential thinking capacity of Clever Hans and other animals. Was Clever Hans really thinking, "I'll stop tapping my foot when you stop nodding your head"? After all, Hans' method was successful in securing him his edible reward. Reasoning that fundamental components of the central nervous system are essentially the same in all animals, Griffin considers animals capable of complex thought, and finds animal communication to be critical evidence for his theory of animal consciousness.

Griffin cited many examples of animal communication from honeybee dances to green monkey alarm calls. In each case, the animals appeared to be responding to their environment, peers, and present situation. For example, green monkeys issue different alarm calls corresponding to which predator is currently threatening the group. Adding to the complexity of their communication, monkeys receiving warning calls respond uniquely to each alarm call, and therefore to each type of predator.

Other species have shown equally convincing examples of complex thought and communication. Griffin related the cooperative hunting of lionesses, bait fishing by green-backed herons, tool use of chimpanzees, and problem solving tactics of ravens to name a few examples.

Although researchers cannot be unquestionably certain that animals share consciousness with us, Griffin's lecture gave students thought-provoking evidence supporting animal cognizance. As animal behaviorists gather additional data to bolster existing evidence indicative of animal awareness, these scientists work toward breaking the taboo of calling animals conscious. In the future, Homo sapiens may realize that we are not alone in our ability to think consciously.



As a strong proponent for animal consciousness, Dr. Griffin cited convincing examples of complex thought. The renowned Dr. Donald R. Griffin gave the Cummins Lecture in the History and Philosophy of Science.

Bison drop 16-12 heartbreaker to Hobart

By Mike Myers

The Bucknell men's lacrosse team lost a hard fought game last Saturday against Patriot League rival and preseason favorite Hobart, 16-12. The Bison faithful were out in full force in support of the Orange and Blue, but unfortunately one fan took his enthusiasm too far—streaking across the field and costing Bucknell a damaging delay of game call.

The Bison did rebound well with a last-second, 8-7 victory over UMBC Wednesday.

Bucknell stayed close the entire game against Hobart, as the score was tied eight times and the lead changed hands four times. The game was deadlocked 7-7 at halftime, which marked the most goals the Bison had allowed in the first half all season.

"We knew we were going to be with this team," head coach Sid Jamieson said. "The question was whether we were going to be good enough on defense."

The Bucknell defense came into the game allowing only four goals in man-up situations this season, ranking first in the nation for that category. However, the Statesman managed to score on three of their seven man-up opportunities.

"We didn't play bad on defense," Alex Gibson '00 said, "we just got caught off guard."

The Statesman's victory was sealed late in the fourth quarter with the help of a strange turn of events. Shortly after Brad Van Nostrand '00 cut the lead to two with 2:46 left on the clock, a streaker—equipped only with a helmet and a lacrosse stick—sprinted across the field in front of a crowd of astonished onlookers and shot and scored on an open net.

Unfortunately, this antic resulted in a delay of game penalty against the Bison, giving possession to Hobart. The Statesman successfully ran down the clock for a minute and a half before scoring to increase the lead to three goals.

> *"There is still a lot of important lacrosse left to be played." Our team has a lot of character. They play for 60 minutes."*
> —head coach **Sid Jamieson**

"They got a couple of fast breaks late in the game," Van Nostrand said. "It was a great game the whole time. A couple of plays just went their way."

"We didn't get the things done in the middle of the field," Keith Poisella '00 said. "We lost to many face-offs and groundballs. Also, we gave up 16 goals compared to our average of six."

The Bison offense was headed by Van Nostrand, who notched three goals, while Gibson and Michael Cheng '01 scored two apiece. Jim Egan'00, Poisella, John Terraciano '03, Mark Juelis '01 and Ed Costello '00 each netted a score for the Bison.

Even with the loss, the Bison remain in the hunt for the Patriot League title and automatic bid for the NCAA tournament. "There is still a lot of important lacrosse left to be played," Jamieson said. "Our team has a lot of character. They play for 60 minutes."

The Bison registered an important 8-7 victory over #19 UMBC on Wednesday. Cheng netted the game-winner with just four and a half seconds remaining. Gibson led the Bison with two goals and three assists, while Poisella contributed two goals and an assist.

Alex Rudis '00 battles for the ball in the Bison's 16-12 loss against Patriot League rival Hobart this past Saturday.

Bison have solid start in League

Manage to win three out of four in a series against Lafayette behind Prout's hitting

By Andrew Bevan

The Bucknell baseball squad started Patriot League play the way it wanted to this past weekend, winning three out of its four games against Lafayette.

In the first game of their doubleheader on Saturday, the Bison got their second complete game of the season from senior righthander Ed Soley, who allowed just one run on six hits while striking out eight. Senior catcher and tri-captain Frank Fresconi got things started for the Orange and Blue in the third inning when he singled home Ian Joseph '01 and Kevin Eiben '01.

The Bison scored in every inning after that, cruising to an 8-1 victory. Tri-captain Tyler Prout '00 paced the Bison offensively, going 3-5 at the plate with four RBI's, including his first homerun of the season. Third baseman John DiBonaventura '01 also connected for a home run, hitting his second of the season. Soley picked up his third win of the year to even up his record at 3-3.

"Ed has pitched very consistently so far. He has been very reliable," head coach Gene Depew said.

In the second game, the Bison fell behind early but recovered to take a 4-3 lead in the fifth when they pushed three runs across the plate. The Leopards retook the lead in the bottom half of that inning when they scored three runs as well, two of them coming off a two-run home run.

"Their hits were very timely. That home run really hurt us," Depew said.

The Bison could only manage one more run the rest of the way and lost by a run, 6-5. Sophomore Chris Lackett suffered his second loss of the season to fall to 2-2.

For the day, Prout, Fresconi and Joseph each had three hits. Joseph stole three bases while Prout and Fresconi combined for nine RBI's.

On Sunday, the Bison went up against the Leopards again in another doubleheader. In its first game, Bucknell started out as well as you can start," according to coach Depew, scoring five runs in the first inning and another two in the second to take an early 7-0 lead. Fresconi sparked the Bison with a two-run home run in the first inning and Prout added two doubles, one in each inning, driving in two runs.

"Prout and Fresconi paced us offensively all weekend," Depew said.

The Leopards scored five runs in the bottom of the second to get themselves right back in it. After the seven the teams were knotted at eight and the game continued into extra innings. The Bison scored two runs in the top of the ninth, complements of RBI singles from Eiben and Fresconi. Lafayette came right back, scoring two runs of their own in the bottom half of the inning. Bucknell got another run in the tenth when Eiben sacrificed home Brad Gething '01. The Bison held on in the bottom half of the inning to squeak out an 11-10 victory.

Sophomore Gregg Farmery picked up his first win of the season with two innings of scoreless relief to close out the game.

"You have to give credit to Farmery. He pitched two innings without giving up a run in a situation of sudden death," Depew said. "He really got the job done for us."

"Winning the first game gave us a lift because we have lost a lot of one-run games this year," Depew said.

In the nightcap, the Bison exploded offensively, hitting a total of nine extra base hits—including five home runs—en route to a 22-6 victory. Fresconi and DiBonaventura both went deep for the Bison, along with Gething, who hit two long balls. Prout continued his great offensive play, going 2-4 with four RBI's and a grand slam. Shortstop Chris Herron '01 also flexed his offensive muscle, going 2-3 with three RBIs for the Orange and Blue. Senior pitcher Mark Stetina threw five strong innings to pick up his first victory of the year.

"I'm glad that the team started the season on the right track and that I could help contribute to the team's success," Gething said. "Hopefully we can use this past weekend as a confidence booster into the rest of the season."

For his outstanding offensive performance this past weekend, Prout was named Patriot League Player of the Week. Prout batted .409 with seven extra base hits, including his first two home runs of the season. Prout drove in eleven runs and scored seven times for the Bison. Prout is currently third in the league with a .410 batting average, leads the league with 34 hits and is first in total bases and second in both runs scored with (22) and runs batted in with (27).

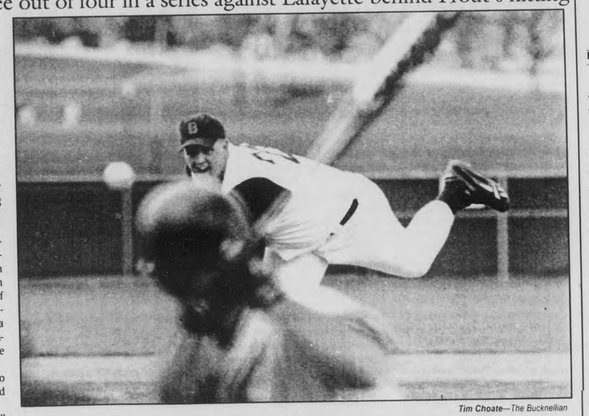
"I think this weekend we showed that we are at the top of the Patriot League. After we hammer out some of the mistakes that we are making, I think we are going to be a tough team to beat in the future," Eric Fishman '02 said.

The Bison returned home for two games this past Tuesday and Wednesday against VMI. On Tuesday, the Bison got going right from the start, scoring six runs in the first two innings. VMI would not get on the board until the top of the sixth inning and, by that time, Bucknell had built a 10-0 lead. The Orange and Blue added one more in the seventh en route to an 11-3 victory.

DiBonaventura went 4-4 at the plate for the Bison with two RBI's, including his fourth home run of the year. Eiben went 3-4 with two RBI's and Prout went 2-5 with three RBI's for the Bucknell. Freshman R.J. Grant pitched seven innings of five-hit baseball, striking out eight while picking up his first victory of the year. "We've regained our confidence offensively and that has carried over to everything else," Depew said.

The Bison fell to VMI, 8-4, in the second game of the series Wednesday, but hope to rebound when they head back into Patriot League play this weekend with a pair of doubleheaders against Holy Cross. First pitch is set for noon on both Saturday and Sunday.

"They are off to a good start as well. It will be a good measuring test for us," Depew said.



Tim Choate—The Bucknellian

RJ Grant '03 and the Bison challenge league foe Holy Cross in a pair of doubleheaders Saturday and Sunday.

Offense lifts women's lax

By Chuck Vicente

Sometimes it takes some work before you see success. The Bucknell women's lacrosse team has certainly done its work. This past week it had two tough away games, and notched two more wins onto its record.

On Tuesday, Mar. 28, the Bison traveled to St. Joseph's. The Orange and Blue started off the scoring early to set the tone of the game. At the end of the first half, they led 8-3. In the second half, Bucknell held St. Joseph's to three goals while scoring three goals of its own. The 13-6 victory improved the Bison's record to 2-4. Ashley Evans '01 led the offense with four goals, while also dishing out two assists. Melissa Montefusco '01 registered an impressive three goals and three assists. Suzanne Raffaele '03 found the back of the net twice, while Ashley Rust '00, Jen Holiday '01, Paige Brewster '01 and Kari Evans '01 each added a goal.

On the defensive end, goalkeeper Nicole Kallis '03 had 19 saves on the day. Kari Evans had the difficult job of marking St. Joseph's leading scorer, which she did to perfection by shutting her opponent down.

Head coach Barb Jordan credited the win to good transition play by the offense and teamwork. "I thought it was our best game yet in terms of working with each other," Jordan said. "Everyone was on the same page and in the right spot at the right time."

> *"I think we need to concentrate on playing our game and playing consistently—and see where we end up."*
> —head coach **Barb Jordan**, *following Holy Cross win*

After the big win, the Bison had to prepare for a challenging league game against Holy Cross. Last season, Holy Cross edged out the Bison, 10-9. Last Saturday it was Bucknell's turn to edge out Holy Cross by the same score.

Raffaele led the scoring drive with three goals, while Montefusco and Ashley Evans each had two goals. Kari Evans, Holiday and Robin Arnesen '02 each tallied one goal.

Again, Kari Evans had the difficult job of guarding the lead scorer; she rose to the occasion once more and held her to one goal. She said it was "intense" to repeatedly face the opposition's best player.

Although Bucknell only had 13 shots on goal the entire game, the ones it took proved to be deadly. Good shooting allowed the Bison to lead Holy Cross 7-4 at the half. In the second half of play, Holy Cross closed the gap by out scoring Bucknell 5-3.

With the Bison up one goal late in the game, Holy Cross had possession of the ball and was threatening to knot up the score. But Erin Curtis '02 came up with one of the biggest plays of the game, by making a critical stick check to gain possession and secure Bucknell's victory.

The Bucknell women's lacrosse team has two home games this week against Drexel on April 5 and Lafayette on April 8. "We are really coming together and working well together," Montefusco said. The Bison are hoping to carry on the momentum of this past weekend into the rest of their season.

Jordan was very happy with the wins, yet stressed the importance of staying focused. "I think we need to concentrate on playing our game and playing consistently—and see where we end up," Jordan said. "It's nice to get this win under our belts."

Bottom row: (left to right) Steve Ward, Mickey Sala, Andy Smith, Brad Van Nostrand, Alex Gibson, Eddie Costello

By Carmen Mauriello

It does not suffice it to say that the senior class of the Bucknell men's lacrosse team has been an integral part of the team over its four years—it has been the team. The 14-man unit struggled through a 3-10 rebuilding year in '97 but has improved and grown closer year by year, helping the Bison to emerge as a national contender this spring.

The unit arrived in Lewisburg in the fall of '96, with visions of the undefeated, Patriot League Champion lacrosse team of the previous spring still fresh in many Bucknellians' heads. But with only two seniors returning, the freshmen had to carry a lot of lofty expectations on their shoulders. A disappointing 3-10 season followed, and the seniors either had the chance to stick together or fall apart.

"We realized that it was going to be us for the next four years, and we stuck together after freshman year on and off the field," said Alex Gibson '00. "We knew by the time we were juniors and seniors that we'd be pretty good."

This strategy proved to be effective, as the cohesive unit consistently improved over the years. In '98, the Bison finished 6-8 and their 2-3 Patriot League mark placed them in fourth place. This was followed by a 7-6 '99 season, in which the Bison upped their league record to 3-2 and their standing to third place.

But that wasn't enough for the seniors; they had their sights set on only one thing for their final season-the Patriot League crown. "With 12 seniors and a solid offense and defense, we felt as if we had a solid opportunity [to win the league] with the leadership of the seniors," Keith Poisella '00 said.

The players dedicated themselves to this goal this past fall, engaging in a rigorous training program in hopes of improving their strength and conditioning.

"If they didn't want to do fall lacrosse, weight training and midnight practices, then we weren't going to be where we wanted to be [this spring]," head coach Sid Jamieson said.

The seniors' dedication to their sport and their team aided in the development of the underclassmen. "Playing with a bunch of guys who have more varsity experience and a great work ethic has aided my transition from year to year," Mark Juelis '01 said. "They help out in any way they can."

The close-knit unit had to deal with two of its three-year members getting cut from the squad before this season to make roster space for underclassmen. "We're a really close unit, on and off the field, and having to come out without them was problematic for us for a unit," Eddie Costello '00 said.

But the unit persevered and opened its spring season 2-2 heading into a huge matchup with Patriot League rival, #16 Army. The Bison prevailed, 10-9, and took a big step towards the league crown.

They followed that with a 7-5 victory over Lafayette, setting up a showdown with fellow league unbeaten, #18 Hobart, last Saturday. The Bison lost a 16-12 heartbreaker in front of a wildly enthusiastic home crowd, but remain undeterred towards their ultimate goal.

"The league has a lot of parity," Jamieson said. "Colgate and Lehigh still have a chance to play Hobart. We hope we can get through our Patriot League schedule and get to play Lehigh at home for the championship."

The seniors have formed the core of the squad at every position this spring. At attack, Gibson is the unit's leading career point-scorer with 40 goals and 30 assists and is also the squad's leading scorer this spring. Costello has registered 11 goals and an assist in his 19 Bucknell starts, while Jim Egan has nine goals and two assists in his 16 career starts.

The midfield is led by captain Alex Rudis, who finished eighth in the nation in '99 in face-offs won per game. Brian Van Nostrand was a Second Team All-Patriot League pick in '99, and is the squad's second leading scorer this season with six goals and six assists. Poisella is also a scoring threat at midfield, as he is the squad's third-leading point scorer this season with eight goals and two assists. Steve Ward, Brad Eyre, Drew Pacinelli and Brad Thawley have provided depth and experience for the Bison midfield.

Steve Burman, Brian McNulty and Mickey Sala have contributed to the solid play of the Bucknell defense. Andy Smith has been a rock in goal for the Bison, starting 18 career games and recording the second-best goals against average in the Patriot League in '99.

The importance of these seniors to the Bison # 21-Nationally ranked squad is immeasurable. They've laid the groundwork for the success of the Bucknell program for years to come.

"If you look at who is doing good things for us now, it's our senior class," Jamieson said. "It's a credit that they have made the team into a contender for the Patriot League championship and for national recognition."

"Because of what we've been through as freshman and since almost all of us remain on the team and are a very tight unit, we've been able to develop into what we are today," Pacinelli said.

Bison fall short in dramatic comeback against Lafayette

By Carmen Mauriello

It's discouraging when you open a match by losing the first set of five of your six singles contests. The Bucknell women's tennis team put itself in this hole in its Patriot League match against Lafayette last Thursday. But the Bison showed great determination in coming back to force four of its singles matches to the maximum three sets, winning two of them.

Paige Cull—The Bucknellian

Tracy Honko '00 hits a winner.

"After getting crushed by Colgate in our last league match, [the turnaround] really raised our motivation because we pulled together as a team," Kristen Inglis '02 said.

Unfortunately, the early deficit proved to be too much, as the Bison fell to Lafayette, 5-4. Their struggles continued against an extremely talented UMBC squad Saturday, who dominated the Bison 8-1.

The Bison who took their singles matches to three sets against Lafayette were Kerry Callaghan '00, Kristen Inglis '02, Laura Maisel '03 and Kary Wolford '02. Inglis and Wolford were the only Bison who prevailed in their third set. Bucknell captured two of the three doubles competitions, with the team of Callaghan and Inglis winning 8-4 and the duo of Maisel and senior Tracy Honko prevailing 8-6.

Inglis' singles victory was her fifth on the season. "Inglis is an up-and-coming player who gets better every match," head coach Rebecca Helt said. "She figured out her opponent's weakness and played her perfectly."

The Bison failed to win a set in singles play against UMBC, but Maisel and Wolford teamed up to secure the team's only point by winning at the number three doubles position, 8-4. "Basically, UMBC is just a great team," Helt said. "I like to play them because they make us play hard. Our girls didn't play to their full potential, but we look at this as a check point to see where we're at going into Patriot League matches."

This afternoon the Bison travel to challenge Towson—a team that they match up well against. The Bison will travel to Bloomsburg this weekend for a quad match with Pittsburgh and Villanova. The Bison will be shorthanded against these tough foes, as Inglis will not be able to attend.

"We're looking to be pushed [in these matches] and see where we're at heading into Lehigh," Helt said. Lehigh will travel to Lewisburg next Tuesday for a critical Patriot League match.

Track has "grueling weekend" at Colonials

By Justin White

The Bucknell track and field teams competed this past weekend at the Colonial Relays at the College of William & Mary. How did the team do? Well, the answer isn't as easy as it sounds. The results for the meet were entered incorrectly into the computer program used, leaving no official results for the meet.

The two-day meet featured some excellent competition for the Bison, giving the team a clearer sense of where they stand at this point in the season.

The meet presented nearly ideal racing conditions—plenty of sun, mild temperature and only a slight wind. Coach Art Gulden took advantage of the situation, forcing his athletes into a "grueling weekend." Because the meet was two days long, with the relays on Saturday, many athletes were able to race in more events than they normally have the opportunity to do.

"The team rose to the occasion," Dave Bronfenbrenner '00 said. He performed true to his words, representing the lone victory on either side for a Bucknell athlete. He won the 3000 meter steeplechase in 9:06.6. It was the second year in a row that he captured the event.

"I was expecting better competition is my race," Bronfenbrenner said. "But I was just happy to get the win for the team."

The men also produced some other strong performances. Ron Hess '00 placed third in the 1500m in a time of 3:50.4, while Bryan Schiding '00 placed well in the long jump, leaping 23'1.75".

The meet lasted past 9:00 p.m. on Friday evening. However, the stadium was not lit, forcing the latter events to be run around a dimly lit track. In one of these events, Scott Sehon '00 and Kevin Weatherill '01 ran more than a half-hour in these conditions to finish second and third, respectively, in the 10,000 meter run with times of 31:13 and 31:28.

In the women's 10,000 meter run, Bucknell displayed its depth, finishing third, fourth and fifth. Carly Graytock '00, Theresa Dennis '03 and Jess Peterman '01 ran 36:50, 37:30 and 39:29 respectively.

Stephanie Bango finished strong in the 800 meter run to finish third in a time of 2:11.2. Lori Allen hurled the shot 45'.5" in a fourth place effort.

The Bison can now settle in for three straight home meets, including the Bucknell Invitational this Saturday. The meet features four teams in addition to Bucknell: Towson, Western Maryland, SUNY Cortland and C.W. Post. The Bison expect to dominate before the home crowd.

Bronfenbrenner expressed the team's optimistic outlook on the meet. "It is a good opportunity to hone our skills and work on some things without having to worry about the team score."

The team's next big meet is in a few weeks against Shippensburg. This dual meet rivalry always brings bad blood on both sides. Bucknell should at least enter that meet healthy and rested.

Dan Blair—The Bucknellian

The Bison men's and women's track teams have time to rest and heal before heading to face rival Shippensburg in a dual meet.

National Sports

Cleaves, Spartans steal the show

Veteran Michigan State squad captures NCAA crown over inexperienced Gators

By Rob Schmicker

The Michigan State Spartans are the first NCAA champions of the new millenium, as they defeated the Florida Gators, 89-76, on Monday night. Led by point guard Mateen Cleaves, whose leadership may have reminded some of a former Spartan named Earvin "Magic" Johnson, the Spartans captured their first national championship since 1979.

And even though they made it look easy at times against Florida, getting to the final wasn't a walk in the park. The Spartans had to come back after trailing in the second half to defeat Syracuse, Utah and Iowa State. Then, in the Final Four, Big Ten foe Wisconsin gave them a scare in a low scoring and hard fought game.

Wisconsin held Michigan State to 35% shooting and only 19 first-half points. Yet, the Badgers trailed by two points, 19-17, at half. This was fine by Wisconsin, who had won with its defense all tournament long.

Still, you had to wonder when the potent Spartan offense would kick into gear, and it did so right out of halftime. The Spartans went on a 13-2 run in the first few minutes of the half and never looked back.

Wisconsin hung in the game with its defense, but its shooting was off and had no one to put the ball in the basket. The Badgers were never able to get close enough to make Michigan State panic and lost, 53-41. The Spartan's gutsy performance allowed seniors Morris Peterson, who scored 16 of his game-high 20 points in the second half, Mateen Cleaves, Charlie Bell and AJ Granger to play one final game together.

In the other semifinal that night, Florida and North Carolina put on a performance that was different from the first in every facet. Florida quickly jumped all over North Carolina out of the gates with an 18-3 run. The Gators built this lead by pressuring UNC and constantly running the floor. But the Heels settled in, and Brendan Haywood led them back with 16 first-half points.

North Carolina went up 45-42 in the second half due to its patient half court offense, but then Ed Cota was hit with his fourth foul with 13 minutes remaining.

The next 16 Florida points were scored against Cota, who was playing tentatively in order to avoid fouling out of the game. This was the turning point of the game. The Gators used their deep bench to keep fresh legs on the court at all times. The constant pressure eventually got to North Carolina, who looked exhausted towards the end of the game. Florida tacked on a few more points and won, 71-59.

That brought us to Monday night's championship game.

One major concern for the Spartans was how they would respond to Florida's press. Another was whether they would be able to score more than the 53 points, their point total against Wisconsin. Neither turned out to be a problem.

The pace at the beginning of the game was fast, as both teams looked intense and ready to play. Florida tried to press the Spartans early, but Michigan State did an excellent job at breaking it. At times, the press seemed to hurt the Gators as the experienced Spartans countered with long passes that led to easy lay-ups.

This didn't allow the Gators to get easy points off of turnovers, and they had to turn elsewhere. Florida center Udonis Haslem got the ball often and answered with 13 points in the first half. But that wasn't enough, as the Spartans took a 43-32 lead into halftime due to Cleaves 13 points on 3-4 shooting beyond the arc.

Four minutes into the second half, the momentum was ready to turn, as Cleaves was taken down hard on a lay-up by Florida point guard Teddy Dupay. Cleaves left the game with a sprained ankle. Instead of folding, MSU increased its 50-44 lead to double digits before Cleaves made a heroic Willis Reed-type comeback.

He didn't play a major role in the half, but he didn't need to. Morris Peterson was hitting threes in everyone's eyes, and Granger was his quiet, nasty self, scoring 19 while grabbing nine boards.

Towards the end of the game, Michigan State really proved to be too much for the young Gators, whose inexperience showed. They now have the whole summer to get ready for next year and wonder what could have been. What if they had attacked Cleaves offensively after he injured his ankle? What if Mike Miller had gotten the ball more? What if the Spartans turned the ball over more? What if their bench, who averaged nearly 32 points per game in the tournament, scored more than 26 points? With that said, Florida has nothing to be ashamed of. They simply got beat by the better team.

So in a tournament ruled by underdogs, one team avoided the upset bug and cut down the nets in Indianapolis. Michigan State made it to the Final Four last year and their experience showed all game long. "This is what I came back here for," said Cleaves, who passed up big bucks in the NBA in order to return for his senior year.

Thanks to his leadership and the timely scoring of Peterson, Granger and Charlie Bell, Michigan State was able to shift into gear at the right time and in return, took home college basketball's biggest prize-the national championship.

Caps and Maple Leafs threaten fading New Jersey for the Eastern Conference lead

By Kevin Logan

The New Jersey Devils might not want to take a look in their rear-view mirror. That's because they're sure to get a clear view of the glaring eyes of the Washington Capitals and Toronto Maple Leafs, who have been breathing heavily down New Jersey's neck for the Eastern Conference lead.

Last Saturday, both the Capitals and Leafs faced off in a crucial game. The Leafs established a commanding 4-1 lead by the end of two periods, thanks to goals from four different players (Thomas, Hoglund, Perrault and Berezin). Washington, however, would not give up its visions of bumping New Jersey out of the top spot.

Despite a missed penalty shot by Ulf Dahlen in the first period, the Caps still put together a near comeback. Steve Konowalchuk scored in the third to close the gap to two, and then rookie Glen Metropolit added his second of the night to make it a one-goal game. But Curtis Joseph would stand tall the rest of the game to give Toronto the 4-3 victory. His stop on the Dahlen penalty shot proved to be a pivotal point in the game.

Toronto, currently third in the East, pulled to within four points of the lagging Devils with the win, while the second-place Caps remained a mere two points away. The final few games of the 1999-2000 regular season will be of immense importance to these teams, as the top spots in the East are still up for grabs.

Wings and Blues battle for the West

These two teams had met 198 times, and 198 times at least a goal was scored. Last Saturday night's game between the Western Conference rivals Detroit Red Wings and St Louis Blues was not to be number 199.

Fans witnessed a total of 46 shots—29 coming from Blues and 17 from the men in red and white—and a total of 46 saves. Chris Osgood was the man responsible for those saves for the Wings, while Roman Turek stood tall between the pipes for the first-place Blues. The scoreless tie marked Turek's seventh shutout of the season, which leads the league.

The game exuded an intense, hard-hitting playoff atmosphere as both teams battled for the conference lead and rights to the Presidents' Trophy.

There were several big scoring chances, including one with 20 seconds to go in overtime, when Martin Lapointe took a shot that made the left pipe ring.

The intensity came to a climax at the end of the overtime period when St. Louis' Michal Handzus laid a hard check on Steve Duschene. Detroit's Lapointe reacted with a charge on Chris Pronger and the two then dropped the gloves and squared off.

How did Pronger feel about being on the receiving end of Lapointe's charge? "I'll put it in my mental Rolodex," Pronger said. Should the two teams face each other in the playoffs, keep an eye out for the two to get into a few scuffles. It would make for an exciting matchup.

The tie allowed the Blues to maintain their three-point cushion over the Wings, who currently are in fourth in the West with 108 points, but would jump to first if they can overtake their Central Division foes.

Notes from around the league:

-Hall of Hulls: Brett Hull is sure to join father Bobby in the Hall of Fame after he retires. And for good reason. On Monday night, the younger Hull netted his 610th career goal, the same number of goals his old man stacked up throughout a famed NHL career (not including an additional 303 goals which the elder Hull scored during his time in the now extinct World Hockey Association). The goal puts Brett in a tie with his dad for ninth on the all-time list and leaves him just three goals shy of Mario Lemieux's mark of 613.

NBA Experts' Picks

By Ali Ahmed and Justin McCarthy

San Antonio at LA Lakers

If there is any combination of big men that can stop Shaq it is Robinson and Duncan. Both have a mix of athleticism, skill and size that is very rare in the NBA. Robinson will have to have a great game offensively to keep Shaq busy on defense and keep him from roaming and helping out with the Spurs' penetration. Everybody keeps talking about Shaq and Kobe, but this game might be decided by how well Glen Rice plays against Elliot and Kersey. This is a must win game for the Spurs since they are battling with the Suns for the fourth spot in the West, but they also have to prove that they will be contenders come playoff time.

Ali's pick: Spurs by three

San Antonio possibly has the only frontcourt, in Duncan and Robinson, that can match up with Shaq and the Lakers. Therefore, this game will not be determined by those players, but rather by Glen Rice, Avery Johnson and the other supporting members of both teams. These teams have split two previous matchups and the winner has been the one who has shot better from the field. This is seen clearly in San Antonio's numbers: in their loss they shot 37%, while in their win they shot 52%. This game will mostly come down to whether the Lakers are able to get offense from other players besides Shaq and Kobe. In their loss they made more than half of the successful field goal attempts of the Lakers, and they were the only ones to get double figures in points. The X factor in this game will be Glen Rice—in the previous Laker victory that was his role. The Lakers one soft spot is their lack of a third scoring threat, but if Rice can gain some consistency, the Lakers could be more dominant than Jordan's Bulls of the 90's.

Justin's pick: Lakers by 13

Indiana at New York

If the Pacers played on the road like they did at home, they would be among the elite teams in the league. For the Pacers to have any chance in the playoffs, they need to start winning on the road, and the Garden would be the perfect place to start such a streak. The Pacers' bench is along the likes of the Nets (yes, the Nets), who can match the depth off the bench that the Knicks have. As with most of the Knick-Pacer games, it might come down to what stars step up. Can Miller once again step up and roast the Knicks with his shooting or will Camby and Sprewell light the Pacers up as they did last year? Derrick McKey might be key in trying to shut down either Houston or Sprewell.

Ali's pick: Knicks by five

The Knicks play a tough schedule these last weeks of the season, and they face a couple must-win games. The Knicks play back-to-back at Miami, and the next day face the Pacers at Madison Square Garden. Ordinarily, fatigue would probably be a factor, especially with Ewing; however, the emotions of both these big games coming so close to the playoffs will counter that fatigue easily. The Knicks will again need their aging All-Star to create a presence in the paint. If Ewing is able to establish himself on the post, then he will open the floor up for Sprewell to drive and for Houston to spot up and shoot. In three previous meetings, the Knicks have lost two of three to the Pacers, while still shooting a better percentage from the floor. The matchup to watch will be between Houston and Miller, both of their respective teams leading scorers. However, in the end, it may come down to whether Rose or Sprewell has a bigger game.

Justin's pick: Knicks by five

Portland at Utah

As great a season as Rasheed Wallace has had, Coach Dunleavy still wants to start Brian Grant and bring Wallace off the bench. If that means that we get to see Grant and Karl Malone go at it once again, it will be well worth it. Also, can Stoudamire have enough of an impact to make the coach stick with him instead of going with Anthony in the fourth quarter? Portland has the third seed in the West locked up, so will the coach rest his stars or try to make a statement and gain some momentum going into the playoffs? Pippen, with his championship experience, should be a key player from now on. Once again, the Jazz will have a great regular season, but it is time for their dismantling to start.

Ali's pick: Blazers by 12

The Jazz have lost two out of three to the Blazers this season, and this game will continue this trend. The Jazz are currently 15-3 in the past month and are one of the hottest teams in the league. Utah will turn to its veteran trio of Stockton, Malone and Hornacek to bring home the victory. The Mailman will have to deliver and establish his position down low if the Jazz hope to win. Hornacek is having one of the most unbelievable shooting seasons in NBA history. Nevertheless, Portland's one huge advantage is its depth on the bench. The Jazz's bench is weak and their starters are old. Portland should win by virtue of its bench alone, not its starters.

Justin's pick: Blazers by nine

Detroit at Minnesota

The Pistons and Wolves are both looking to move up in the playoff seeding. However it is of greater note to see the best two small forwards compete against each other. Grant Hill is the prototype small forward, possessing great all round skills, while Kevin Garnett is a freak combination of size and skill. Both are leaders of their team in every way and need to have big games to carry their teams. However, the teams are headed in opposite directions. The Wolves have their core players and simply need for them to develop—especially Szerbiak and William Avery. On the other hand, the Pistons need to make quality additions to their team, and most importantly, try to re-sign Grant Hill. Players to watch will be Joe Smith and Szerbiak, and how far the Wolves go might depend on how well they play. I might regret this, but I think the Wolves are ready to make some noise in the playoffs this year.

Ali's pick: Wolves by 14

Detroit lost previously to the Wolves, however, the way Hill and Stackhouse are currently playing, the Pistons are virtually unbeatable. Garnett should easily establish his presence, yet it is doubtful that he will be enough. Brandon will need to step up, and Joe Smith has recently become a force coming off the bench, scoring double digits his past few games. Both teams are fighting in tight playoff races for positions in their respective conferences. However, the T-Wolves have already locked up a spot in the playoffs, while the Pistons are still in the hunt. Therefore, their will to win will be greater and will lead them to tame the Wolves.

Justin's pick: Pistons by eight

Interested in Web Site Design?
We have several summer associate positions open to college students. Apply by 4/14/00.
www.maloneweb.com/jobs
malone web design
Summer Associate - Web Design
- Work directly with project leaders and clients to produce crisp and professional web sites for MWD's clients, which include small businesses, professional service firms, non-profit organizations and schools.
- Conceive and implement graphic designs that effectively convey the image and reputation of the client.
- Work in a team environment that fosters teamwork, camaraderie and fun.
Our ideal candidate is a creative person who has graphic design abilities, technical proficiency and business acumen. Please see www.maloneweb.com/jobs for the full list of requirements.
MWD provides attractive pay packages as well as valuable experience in Internet development that will impress future employers. The deadline for applications is 4/14/00.
Please email your resume and cover letter to jobs@maloneweb.com or fax it to 520.222.2724

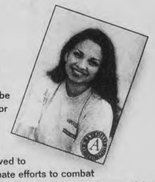
"This whole experience has been all pluses."



Annie Perezchica says she got even more out of her AmeriCorps experience than she put into it. "I can't believe how lucky I am to be an AmeriCorps member. I'd be poor for ten years for this kind of experience." Annie started a California program that finds jobs for homeless people and then moved to Washington, D.C., to help coordinate efforts to combat homelessness nationwide. "I've grown more than I would have doing anything else. Joining AmeriCorps was the best decision I ever made."

Bison top St. Joe's and Binghamton

By Mike Brophy

Dan Blair—The Bucknellian

Todd Jacobs '03 hits a return in Bucknell's win over St. Joseph's. He and the Bison will be in action this week against league powerhouse Navy.

The Bucknell men's tennis team recorded a very strong week, going 2-1 and upping its record to 5-7. The Bison opened the week with a victory over St. Joseph's, then moved on to suffer a tough loss against Patriot League rival Cornell and finally concluded the week with another victory over Binghamton.

Playing on their home courts, the Bison trampled over St. Joseph's. Bucknell won five of the six singles matches and were able to sweep all of the doubles matches.

This was the first match back from injury for the team's captain and top player T.K. Kelly '00, and even though he did not claim a victory, head coach Bob Hammerlee was very positive about his performance. "He played surprisingly well. I am very pleased with how he is hitting the ball," Hammerlee said.

Last Saturday marked the team's first Patriot League match of the year against Colgate. Unfortunately, the Bison fell, 6-1. Todd Jacobs '03 won the only match for the Orange and Blue at the number five position by a score of 7-6 (2), 6-0. Even though the Bison lost their Patriot League opener, Hammerlee is still very confident in the team's ability to compete in the league in the remainder of the season.

Bucknell's final match of the week was against another very strong tennis team, Binghamton. This was a very bid win for the Bison as they collected three of the singles matches and two of the doubles.

As the match came to a close, the last singles match broke the point tie and gave the Bison the win. Every player and fan surrounded the court to watch the final and deciding match that pinned Bucknell's Jeff Gould '01 against Binghamton's Brad Sherwood. It was a very close match, but in the end Gould pulled it out by a score of 7-5, 6-4.

"[This victory over Binghamton] was the high point of the season so far," Hamerlee said.

Alex Davydov '02 and Todd Jacobs '03 kept their very strong season going by registering victories.

Bucknell is back in action this week against Navy, St. Bonaventure and George Washington. Hammerlee expects Patriot League favorite Navy to "come out with all of its guns blazing," but likes his team's matchups against the other two teams.

Crew rows strong at the Occoquan

By Jennifer Ciotta

This past Sunday the Bucknell men and women's crew teams traveled to Fairfax, Va. to compete with an experienced field of talented crews.

On the men's side, the varsity lightweight eight made a strong showing of fifth place overall. From two weeks ago in Georgia, they decreased the time between themselves and rival Duke by eight seconds.

The Bison also decreased the time between themselves and Virginia Tech by 15 seconds. Both Duke and Virginia Tech are ranked among the top twenty crews nationally, which shows promise for the Bison men in future regattas. The Bison boat was composed of captain Scott Uebele '00, Sean McBride '00, Scott Ortland '01, R.J. Prushnok '01, Jeff Jockel '01, Jeremy Urban '02, Brent Timberlake '02, Jeff Summerhill '03 and coxswain Sara Pryor '02.

On the novice men's side, the B boat finished second overall in the B final. The A boat won its heat and finished fifth overall.

"For the lightweight men, after two weeks of not racing well duo to inexperience and inclimate conditions, this race was a step in the right direction by closing in on good competition," Uebele said.

On the varsity women's side, the women's pair of lightweight captain Sarah Diegnan '00 and Keri Heuberger '02 beat Mary Washington to capture the gold. The women's four comprised of open weight captain Annie Calcagni '00, Elizabeth Barrows '00, Kelly Wanger '00, Julie Engel '03 and coxswain Linda Voll '03 rowed the most exciting race of the day. Last weekend, the Bison beat Pittsburgh by eight seconds. In this race, they rowed a strong finish to capture the gold, beating Pitt by only one second.

This weekend, both the Bison men and women's teams will be facing stiff competition at the Knecht Cup in Camden, NJ.

Crossing the line?

Courtesy of [illegible]

St.John's Erick Barkley and coach Mike Jarvis.

By Brian Watson

The National Collegiate Athletic Association (NCAA) has suffered from a rash of college basketball players foregoing their eligibility for a shot in the pros. While many coaches and college administrators have taken steps to make the college level more appealing, the governing body has taken a different approach.

This season, the NCAA entered new jurisdiction, investigating its players' high school careers for signs of improprieties. The result: more players getting looked at, their backgrounds checked and with even the slightest utterance of a violation, harassed until they must do the only thing they can do—and the last thing the NCAA wanted them to do—enter the NBA draft.

"I hope that none of you feel the way I have the last two days, as if someone had come into my house and raped me," said St. Johns' men's basketball coach Mike Jarvis during the NCAA's continuous investigation of his star player, sophomore point guard Erick Barkley.

Barkley wasn't the only victim this year, but he certainly was Public Enemy No. 1. Before arriving at St. Johns', the New Yorker spent his senior year at Maine Central Institute, a powerhouse program for postgrads and players struggling to get their SAT's up to par.

At some point during his stay there, Barkley traded his late model Jeep Cherokee to a family friend for a bigger (but older) Ford Expedition. Sources close to the family reported that no money was involved in the trade, and the NCAA was notified.

The sentence: a three-game suspension.

Next, the NCAA looked into his tuition expenses at MCI, and found that Riverside Church, a New York City Amateur Athletic Union (AAU) program, contributed to these payments.

The sentence: the NCAA ruled he would have to pay back $3,500 of his $22,000 tuition, permitting Barkley to donate the money to a charity of his choice and allowing him until the end of his NCAA eligibility to do so.

Through suspensions and endless investigations, St. Johns' stayed on its feet. When it came time for a crucial showdown against then second-ranked Duke, Blue Devil coach Mike Kryzezwski and star player Shane Battier held a press conference, asking the "Cameron Crazies" to leave Barkley alone, citing him as the victim of an NCAA "witch hunt."

After St. Johns' upset victory at Duke, the NCAA stepped back in, this time questioning the authenticity of Barkley's SAT scores. Although nothing has yet come out of this, the inquiry is another in an endless manhunt against what seems to be a nothing more than a talented young basketball player.

So what will happen to JaRon Rush of UCLA next season? The star sophomore was suspended an astounding 44 games for taking only $200 from a former coach.

What about his younger brother Kareem? The Missouri forward was benched for a similar infraction.

Jamal Crawford? One of the Big Ten's top freshmen, Crawford was suspended five games for, in essence, living with his guardian. With the permission of his mother, Crawford lived with a man, though not his legal guardian, who helped him gain eligibility in the NCAA.

Now the lists of underclassmen leaving or considering the NBA draft are out, and guess who's on top of the list ... Barkley, Crawford, and the Rushs.

Unfortunately, leaving for the NBA might be the best option. If Barkley decided to stay, who's to say the powers that be won't continue on their quest against him. Will the NCAA find more improprieties in Crawford's past? What if Kareem and JaRon Rush received more than $200? Maybe it's better to leave it all behind then fall victim to a merciless manhunt that not only dehumanizes the players but also turns them against the spirit of collegiate athletics the NCAA has worked so hard to instill.

"I hope and pray I see the day when there is no NCAA, and when we are guided by the values system with which we are brought up on, that we fight for every day in this country," Jarvis said.

"Enough is enough. It's time for a change."

Sports

When will enough be enough?

Commentary

Carmen Mauriello
Sports Editor

Ask sports fans today about what the phrase "Dream Team" brings to mind and you'll get mixed responses. Some may respond with the L.A. Lakers, the New York Yankees or even the WWF duo of the Rock and Mankind. Tell them that you're referring to the 2000 U.S. Olympic men's basketball Dream Team and they'll probably wonder, "We're still doing that?"

Yes, unfortunately, we are. A 12-man squad of NBA superstars has been assembled to represent the U.S. (or should I say to serve as international bullies) in the 2000 Sydney games-the third installment of the Dream Team. Only this time it seems like no one cares.

By an overwhelming vote of 56-13, the FIBA World Congress decided on Apr. 7, 1989 to allow professional athletes to compete in the Olympics and World Championships. For the previous 50 years, college athletes and players from the Amateur Athletic Union (AAU) represented the U.S. at these competitions in men's basketball.

Up until that point, the United States had been remarkably successful in Olympic men's basketball, capturing the gold nine of the 11 times in which it competed and compiling a total record of 85-2 (including a controversial loss to the Soviet Union in the 1972 Gold Medal game).

Despite this amazing success, the U.S. decided to take advantage of the new rule to cast aside any doubts among the world community of its dominance in basketball. The USA Basketball's Senior Men's National Team Committee selected 11 NBA players and one college athlete to represent the U.S. in the 1992 Barcelona Games.

The team's NBA members were Michael Jordan, Magic Johnson, Larry Bird, Charles Barkley, David Robinson, Patrick Ewing, Karl Malone, Scottie Pippen, Chris Mullin, Clyde Drexler and John Stockton. Duke's Christian Laettner, the best college player of 1991-92, was the lone college representative. Two-time NBA championship-winning coach Chuck Daly was the squad's headman.

Many consider it the best team ever assembled, in any sport. Almost all of the NBA members are certain Hall-of-Famers, and Jordan, Johnson and Bird are considered to be among the game's all-time greats.

Americans created a frenzy of national spirit as they watched the red, white and blue defeat its eight adversaries by an average of almost 44 points per game. "[The popularity of the team] was like Elvis and the Beatles put together," Daly said.

With a 117-85 win over Croatia, Team USA captured the gold. Its players were very emotional at the ceremony, for Olympic gold was something that many of them never believed they'd have an opportunity to play for. The victory was all the more special because the Olympics marked the end to the competitive career of Johnson, who announced that he was HIV Positive in November 1991. His brave performance inspired the Nation and Olympic gold was a fitting end to his brilliant career.

Many believed that the Dream Team also fulfilled its idealistic goal of improving foreign teams by letting them play against the best.

"The more [foreign teams] play against our best players, the more confident they're going to get," Daly said. "Finally there will come a day-I'm not saying that it will happen anytime soon, mind you, but it'd inevitable that it will happen-that they will be able to compete with us on even terms. And they'll look back at the Dream Team as a landmark event in that process."

The Dream Team appeared to be a resounding success in every facet-exhibiting the U.S.'s dominance, giving some of the game's best an opportunity of a lifetime, stirring up American spirit and even benefiting its foreign rivals. The U.S. Olympic Committee figured that if it isn't broke, don't fix it.

It sent a 12-man NBA unit, tabbed Dream Team II, to the 1996 Atlanta Games. The composition of the squad was five returning members from Dream Team I, a few proven veterans who had just missed the cut in '92 and some of the league's up-and-coming talent. Shaq, Grant Hill and Reggie Miller were among the team's top newcomers.

As expected, Team USA breezed to the gold medal, with none of its eight competitors coming within 20 points. Despite this dominance, something was missing from the team's gold medal run.

Whether its players lacked the notoriety or emotion of those on the first team, the goal of establishing U.S. dominance had already been achieved or the benefits to its foreign rivals of being humiliated were becoming less apparent, Dream Team II failed to stir up the same nationalist fervor that its predeccesor did. Without the intangibles of the first team, what fun is watching its games when you already know who's going to win?

The 2000 Games are quickly approaching, but Dream Team III hasn't been getting much attention. It's a very young squad, with Hill and Gary Payton being the only repeat members. With the talent disparity between the U.S. and its foreign rivals that is growing if anything, Dream Team III is once again the expected to cruise to the gold.

So when will enough be enough? How much longer will viewers have to watch noncompetitive games between two teams that obviously don't belong on the same court? How many more embarrassments will competitors have to suffer through?

Our point has been proven-we are the best. Now it's time to return the team to amateur and college athletes; they are on a much more level playing field with their opponents, and their talent is evident by their previous Olympic record of 85-2.

Sure it's great to give NBA players a chance to fulfill their childhood dreams. But they have the opportunity to play day-in and day-out in the NBA, the most competitive and prestigious league on the planet-a chance many college and amateur athletes will never get.

I think Americans would be more supportive of a team of overachieving players pulling out gritty wins rather than a bunch of millionaires who don't even break a sweat. It's the American way.

Offensive woes continue for Bison

Finish 1-5 in doubleheaders against Rider and league foes Lafayette and Lehigh

By Brooke Rea

In a tough series of three doubleheaders last Thursday, Saturday and Sunday, the Bucknell women's softball team came out with a disappointing 1-5 finish overall. Strong fielding and pitching helped the Bison nab an 8-3 victory over Lafayette Saturday, but the women weren't able to put together seven solid innings in any of the other games.

The opening game of the Thursday doubleheader against Rider was a close one, with both teams scoreless until the seventh inning. Rider took a 1-0 lead in the top of the seventh, but Nicole Zergebel '00 tallied one run for BU in the bottom of the inning to even up the score and send the game into extra innings.

In the top of the eighth, Rider loaded the bases and hit a grand slam to take a 5-1 advantage. Bucknell's two hits in the final inning couldn't contend with Rider's performance, as the Bison fell to the Broncos 5-1 in eight innings.

"We played well [in the first game] against Rider," head coach Terrie Grieb said. "We had a chance to win it in regulation before extra innings, but we didn't get the runners in. We had hits but we just left the runners on base and it ended up costing us."

The second game against Rider began with an exciting first inning, but it was stolen away by Rider in the fifth. The Broncos came out and scored three runs in the first, but BU answered back with two runs of its own from Heather Janowski '02 and Zergebel.

In the fifth inning, the Broncos bagged four runs, and, after scoring one in the top of the sixth, held the Bison scoreless until the game was called due to darkness. Rider came away with an 8-2 victory.

The Bison came out strong against Patriot League competitor Lafayette last Saturday, but ended up splitting the doubleheader. In the opener, BU had gained a 4-0 advantage by the top of the fifth, but Lafayette scored six runs in the inning to take a 6-4 lead. The Leopards sealed their win in the bottom of the sixth with five more runs, and BU fell 11-5.

Grieb admits that the Bison were not at their peak for this game. "We did not play well against Lafayette. We did not hit well, we did not field well, we didn't put it all together," Grieb said. Senior Kristina Tan and freshman Meredith Gill led Bucknell with two hits each, and Zergebel hit her second home run of the season, batting 1-3.

The second game against Lafayette brought Bucknell a solid 8-3 victory, thanks to strong hitting and base running late in the game. A four-run fifth inning helped BU gain the lead in a 2-2 game, and another run in both the sixth and the seventh innings clinched it.

Sophomore Jenna Demetriades stood out with a 3-4 performance at the plate, including a homerun. Tan continued solid play with a 2-3 showing at the plate. Brandi Porter '03 pitched a complete game, improving to 3-4 on the year after earning the victory.

Paige Cull—The Bucknellian

Jackie Trapp '03 beats the throw at the plate against Towson on Wednesday.

Sunday the Bison faced Lehigh and couldn't seem to come together in the first game. "We didn't really play as a team," Greib said. Lehigh capitalized on this to gain a 6-0 advantage by the bottom of the fourth. Bucknell came back with two runs each in the sixth and the seventh, but Lehigh also tallied another run and came out with a 7-4 victory.

Meredith Gill '03 led the Bison hitters in this game, going 2-3 with a two-run homerun. Charity Ford '01 was 1-3 with a two-run round-tripper, and Porter gave up just six hits from the mound.

The Bison played an impressive second game against Lehigh, but they had to work off a seven-run hole they fell into in the second inning. In the fifth, they came out strong, trying to even it up with five runs, which brought the score to 8-7. But neither team scored in the last two innings, and Lehigh came away with the 8-7 win.

"In the second game [against Lehigh], we out-hit them, out-fielded them and definitely out-played them, but we didn't get key hits when we needed them," Grieb said. "We left runners on first and second with one or two outs and we couldn't bring them in for the runs."

Demetriades had another solid game, going 2-3 with a double and a triple at the plate. Gill also went 2-3 with a triple. Tan was 2-3, while Zergebel and Sophomore Kelly Dugan were both 2-4.

Bucknell's weak finish to last weekend will not affect its chances to finish strong in the Patriot League, since all teams go to the league tournament. And Grieb is not worried that the team's losses show a lack in its capabilities.

"We're not peaking right now," she said. "But that's probably a good thing because we want to be peaking on April 28, 29 and 30th—when it's important for the championships."

Bucknell's struggles continued Wednesday in a doubleheader against Towson. The Bison fell,10-6, and, 11-6, in the two games. They will be looking to return to their winning ways in a Patriot League game at home this Saturday against Colgate.

Bison fall short against nation's best

Matthew Kasdan—The Bucknellian

The Bison travel to the Allegheny Championships on Apr. 14 and 15.

By Allison Kuhn

The Bucknell women's water polo team continued to struggle to find consistency in its play when it faced some of the country's top ranked teams last weekend. The Bison lost in overtime against Queens, 6-5, fell to #11 Princeton, 12-5, and then against #19 Villanova the Bison gave their opponent a run for its money but came up short, 12-9.

Against Villanova, the Bison struggled for three-quarters to get the offense going and found themselves behind 4-1. In the fourth quarter, Bucknell was able to tie the score and send the game into overtime.

"We rallied in the fourth period to charge back and tie the score with a man up conversion in the last 30 seconds of the game," head coach John Zeigler said.

The teams traded goals in overtime, but a last-second shot by Queens from the outside found the corner to break the tie and seal its 6-5 victory.

Paige Cull '01 and Brooke Rea '02 both had two goals to lead Bucknell, while Adrienne Schober '02 and Julie McLaughlin '01 each had a goal and added four and three steals respectively.

"The overtime loss was tough because we came back from so far behind," co-captain Emily McKnight '00 said.

The Bison started out strong against Princeton, finishing the first quarter with a 4-4 tie. "Lots of movement on offense and a strong crash defense helped generate turnovers and we capitalized on Adrienne Schober's three-goal first quarter," Zeigler said. "Our first quarter was by far the best we have played this season, and was encouraging after a tough loss earlier in the day."

In the second quarter things began to fall apart for Bucknell, as the Bison were outscored 6-1.

"Princeton proved that the combination of their exceptional outside shooting and strong hole play was a difficult combination to defend. A very tough press defense denied us from scoring in the second half," Zeigler said.

In their last game against Villanova, the Bison again had trouble finding consistent play. The team was hesitant in the first quarter, which allowed Villanova to gain a lead.

"Similar to the Queens game, we were tentative offensively and threw away many early passes that led to Villanova counterattack goals," Zeigler said.

The Bison were down 8-3 at the half but, in the second half, they managed a 6-1 fourth quarter run; unfortunately, it just wasn't enough for the win, as the Bison fell 12-9.

"If we could play the entire game the way that we played in the fourth quarter, we would be unstoppable," McKnight said.

Katie Stahler '03 was impressive with four goals, McLaughlin had two goals and three steals, while Cull registered four steals.

The Orange and Blue look next to the Allegheny Championships, April 14th and 15th. The Bison are seeded third and must place either first or second to qualify for the Eastern Championships.

The Bison will concentrate on playing a consistent game. "Overall the weekend was valuable to play against some dominant teams, and we learned that when we play together we can play with any team," Zeigler said. "We will work on trying to put that intensity and teamwork together for a full four quarters."

Golf gains experience at Georgetown Invitational

By Sean Houston

On Monday, the Bucknell men's varsity golf team finished competing at the Georgetown Golf Invitational. The two-day tournament was held at the Swan Point Yacht and Country Club in Issue, Maryland (Par 72, Yardage 6761). The Bison's final team score was a 666, which placed them 23rd out of 27 teams.

The Bison finished 44 strokes behind the winner, Iona College, and 21 strokes behind 16th place Lehigh, the only other Patriot League school represented. The tournament utilized a five-athlete play, four score format, and the Orange and Blue shot a 328 on the first day of the competition and 338 on the second day.

Nick Leibowitz '02 finished with the best two-day score of 163 (82, 81) for the Bison. Junior co-captain Ken Kosteva matched Leibowitz for the best individual round and had a two-day score of 165 (81, 84). David Horton '01 was next with a 166 (82, 84), while freshmen Nick Perini and Jimmy Freeman rounded out the scoring, both shooting a 173, (83,90) and (84, 89) respectively.

The depth and format of the competition was a change from the Orange and Blue's head-to-head competition against Methodist College two weeks ago. But it will be similar to what they can expect at their next matchup this weekend, when they will be playing at the Navy Invitational, held in Annapolis, Md.

The Bison expect the host Midshipmen to provide stiff competition for the rest of the field. A second day collapse spoiled Maryland's chance for victory at the Rutherford Invitational at University Park, Pa., so they will be fighting to secure an NCAA tournament bid. The Navy Invitational will be the last chance for Bucknell to tune-up for the Patriot League Championships, which it will host from April 27th-29th.

Feinstein finishing new book on League

By Chris Ellis

He is arguably the most prolific sports writer in America. His previous best-selling books have dealt with, among other topics, the PGA Tour, the Atlantic Coast Conference, Tiger Woods and Major League Baseball.

But the latest project for John Feinstein doesn't deal with college or professional athletics at their highest levels. For him, that is just the point.

Courtesy of twbookmark.com

Feinstein is putting the final touches on a new Patriot League basketball book.

Feinstein's soon to be released book, tentatively titled *The Last Amateurs*, chronicles a season of basketball in the Patriot League. Feinstein followed all seven Patriot League teams throughout the 2000 season, watching teams' every move from preseason banquets to Lafayette's NCAA tournament loss to Temple, and will compile his experiences and stories into a full-season narrative of life in low-level Division I basketball.

After spending much of his professional life covering big-time college athletics, why would Feinstein choose to use a year following a conference typically rated near the bottom of all Division I leagues?

To him, the reason is simple.

Feinstein first became acquainted with the Patriot League after watching the Adonal Foyle-led Colgate Red Raiders play top-seeded Kansas tough in the 1995 NCAA tournament. But the idea to write the book stemmed from an experience at a high school basketball showcase in New Jersey during the summer of 1999.

After learning that many of the top high school players in the country were either academically ineligible to play college basketball, had criminal or 'street' records, or were foregoing college for the NBA, he needed to take break from the action to reflect outside.

"I walked out of there thinking, 'Oh, my God. What has this all come to?,'" Feinstein recalled from his Bethesda, Md. home. "At that point, I ran into (Colgate and Navy coaches) Don Devoe and Emmett Davis. I talked to them about how disgusting the cesspool of big-time college basketball had become and I thought, 'Why don't I write a book about the kids who play for Don and Emmett?"

After mulling the idea further, Feinstein told his editors and agent about his planned Patriot League project.

"Of course, they ran screaming from the room," Feinstein recalled with a laugh.

After convincing his editors that he wanted to pursue the project, though, the research on the Patriot League began. Feinstein started researching the league during the end of the summer, meeting with coaches, administrators and players to get a feel of the campuses, towns and atmosphere that surround the seven Patriot League schools.

For the Bucknell athletic employees who worked most closely with Feinstein in his yearlong journey, the reasons to enjoy Patriot League basketball have been obvious all along. Still, it came as quite a shock to some upon hearing that

Eviction case takes sharp turn

After house declared "uninhabitable," evicted students caught occupying home

By Peter Van Emburgh

Five University students were arrested for defiant trespass on April 4 at 700 Market Street by Lewisburg Police for spending the previous night in the "uninhabitable" house. The case against Tyler Prout '00, Leonard Selenski '00, Paul Loranger '00, Melanie Winter '03 and Eliza Mumma '00 has been filed with the office of the District Justice Leo S. Armbruster and will also be sent to the office of the District Attorney.

The case stems from the March 24 eviction of six University students, including Prout, Loranger and Selenski, from the Market Street house.

The Union County Housing Authority code inspectors closed the house for "unsanitary conditions and safety code violations" according to Jeremiah Engle, Executive Director of Union County Housing Authority. The house was pronounced "uninhabitable" and the students were allowed to enter the house only in daylight hours to make necessary repairs or gather belongings.

Engle said that neighbors of the house complained several times about the exterior maintenance of the house and of noise violations. "There were visible code violations seen from the exterior of the house, like broken windows," Engle said.

Paige Cull—The Bucknellian

Six students resided at 700 Market Street.

"We had no idea that violations were occurring," Selenski said. "We knew that our neighbors complained whenever we had people at the house."

The Union County Housing Authority then sent code enforcement inspectors to the house to examine the possible code violations. According to Engle, the residents denied the inspectors entrance into the house.

"We felt that we had probable cause to search the house, so we obtained a search warrant from the District Magistrate," he said.

The code inspectors returned to the house for code inspection. The inspectors noted many health, safety and code violations broken inside the residence.

"We made the decision to close the house immediately, declaring the house uninhabitable," Engle said.

The investigation continues to determine what charges will be levied against the students and also possibly the residents' landlord. "[Determining which persons will be held accountable for the code violations] is currently being explored," Engle said.

The Borough Solicitor is reviewing what violations did occur and will then determine what charges will be levied against the students and/or landlord.

The Union County Housing Authority held a meeting with the students and their landlord to make their point clear that the building was not to be occupied. The students could return to the house only to make necessary maintenance repairs or to gather their belongings.

The case took a sharp turn when, on April 4, three of the residents were caught occupying the building with two guests. The Lewisburg Police filed charges against all five suspects, charging them with defiant trespass. The building was subsequently locked and the residents' keys were turned over to the landlord.

Recently, the Borough of Lewisburg announced that they were forming a Responsible Housing Committee by May 1. The committee will be composed of Lewisburg residents living in rental property areas, as well as representatives from the University and the Borough Council.

Glover, Justice to perform in Weis Center

Entertainers' collaboration recalls Langston Hughes and Martin Luther King, Jr.

By Laura Cardinal

Many people believe that the University is too small and too rural to attract any big name guests to our campus. The Bucknell Activities Council has proved them wrong numerous times by bringing such acts as Counting Crows, Rusted Root and Indigo Girls to our tiny stage.

Now it is the Student Lectureship Committee, a sub division of Bucknell Student Government, that has proved us wrong again. This organization has worked diligently for months to bring renowned actor Danny Glover along with his colleague, director and actor Felix Justice, to campus.

Danny Glover is perhaps best known for being Mel Gibson's partner and sidekick in all four of the *Lethal Weapon* films. He has also starred in *The Color Purple*, *Lonesome Dove* and *Predator 2*.

In addition to being one of Hollywood's favorite leading men, Glover, a long time advocate of literacy, has spoken at high schools and colleges across the country about the importance of reading and education, and stresses the importance of social and racial justice.

It is exactly this message of social justice and change that Glover and Justice will be bringing to Bucknell's Weis Center, on April 17, 2000, when performing "An Evening with Langston and Martin."

The performance will last approximately two hours and will be presented in four separate sections. It begins with Justice portraying Martin Luther King, the famous civil rights activist. Justice will try to bring new life to King's dreams as he reenacts one of his most famous speeches.

Langston Hughes, a famous African-American poet and leader of the "Harlem Renaissance" in the 1920s, will emerge next. Glover will recite his poetry in an attempt to capture the humor, hope and plea for change that served as an inspiration to so many who read Hughes' poetry.

Following their individual acts, the two performers will incorporate their characters and speak onstage together. The program will conclude with a brief question and answer period with the audience.

see GLOVER, page 4

CHOICE offers more than substance-free housing

By Jennifer Jenchura

Beginning next semester, the University is enhancing its commitment to substance-free living. The new Choosing Healthy Options In Community Environments (CHOICE) program was developed with the help of students currently living on substance-free floors and the Office of Housing and Residential Life, and received approval from the dean of students in February.

An integral part of this program is maintaining a substance-free living space and creating an atmosphere of mutual respect for individual lifestyle choices.

Last fall, Dan Remley, Director of the Office of Housing and Residential Life; Victor Arcelus, Residential Life Coordinator; and Tracy Shaynak, Director of Health Promotion Programs, met with a 12—student committee over a three month period in order to enhance the programmatic components of substance free living.

This group brainstormed problems with current substance—free options. They also expressed interest in preserving hall unity.

In the past, R.A.'s were given no extra training for substance—free floors. Halls did not have special programming and there was no link between substance-free halls and the Office of Health Promotion Programs. Next semester, R.A.'s will complete extra instruction and work with CHOICE fellows.

Paige Cull—The Bucknellian

Housing and Residential Life Director Dan Remley was instrumental in forming the CHOICE program.

CHOICE fellows will be upperclass students living on designated CHOICE floors who help coordinate fun activities for students with healthy lifestyles.

Although the fellows have not yet been determined, they will be responsible for initiating, planning and implementing programs that support the decision to live in a substance-free environment.

At the present time, students are given the option of living on a substance—free hall when they apply for housing as incoming first-year students and during room selection for upper-class students.

In recent years there has been an increase in the number of incoming students who request substance-free housing. Last year approximately 20 upperclassmen were in the previous substance—free program.

According to Remley, "this year that number has tripled to 60 students. These students will be occupying the fourth floor of Harris Hall and the first two floors of Trax Hall. The class of 2004 also has the option to select the CHOICE program and will live in the first three floors of Harris Hall."

Created for students by students, the Office Housing and Residential Life was thrilled with the enthusiastic response of the 60 students who decided to become apart of CHOICE next year.

"There was a significant interest in just the first year of this program," Arcelus said.

According to many students, the best feature of this program, along with its extra activities, may have been that virtually all the rooms for the CHOICE program were singles, and students had the opportunity to

Union letter scrutinized

By Brian Watson

In 1997, former Vice President for Finance and Administration Barry Maxwell issued a letter warning Dining Services workers about the implications of obtaining union cards from the United Food & Commercial Workers Union; a similar letter was issued last November by current Vice President Peggy Plympton.

The Bucknell Caucus for Economic Justice (BCEJ), headed by Associate Professor and Chair of Economics Charles Sackrey and Associate Professor of English Saundra Morris, has issued an open letter to incoming President Steffen H. Rogers, urging him to address this issue, which the Cau-

Greek Week entertains campus community

By Rachel Laskow

For one week, freshmen and other non-Greek students will be able to familiarize themselves with the University's Greek system. Brian Blue '01, vice president of external relations for Interfraternity Council (IFC) and head of the Greek Week Committee, said, "What I hope to accomplish with Greek Week is to allow the campus, especially first-year students, to become better acquainted with the Greek system."

This week also starts the recruitment process, which officially beings with rush in the fall.

On Sunday, April 9, open houses/suites kicked off Greek Week for all eligible freshmen.

During this time freshmen girls were able to learn about each sorority in Hunt Hall while boys met brothers at various houses.

The Greek God and Goddess Competition took place on Monday in the Smith Quad. During this event, similar to Miss America, each sorority and fraternity entered one contestant. Each contestant performed a talent and answered a question in a "Question and Answer" portion of the competition. Landon Sulick '00 from Sigma Phi Epsilon and Kim Sedgwick '01 from Alpha Chi Omega won the titles.

The winners of the contest earned points for their respective chapter towards winning Greek Week and the prize money toward their philanthropy.

Freshman Class President Laura Day '03 said, "The Gods and Goddesses competition today was a definite success. The Smith Quad was packed with students cheering on the Greek contestants. Everyone laughed and had a good time."

Paige Call—The Bucknellian

Kim Sedgwick '01 won the title of "Greek Goddess."

On Wednesday, the Greek Carnival was held in the fieldhouse. Each fraternity and sorority was responsible for an event, including dart throwing, magic tricks, bowling and face painting. Also, an all campus picnic was held.

On Thursday, the Greek Awards Reception will be held at 6:30 p.m. in the Terrace Room. During this time, students who have contributed significantly to the Greek system and the University community will be recognized.

At the end of the week, 20 different fraternity and sorority chapters will all get together for the philanthropy/community service event. This Greek Service Day will take place at the Fort Discovery Learning Center in Sunbury.

Paige Call—The Bucknellian

J.T. Skelly '01 and Matt Summers '02 representing Sigma Chi take part in the Greek Week antics.

Also, at the end of the week, the fraternity or sorority that put forth the most effort throughout the week will win a trophy and money towards their philanthropy.

"It is a time when we can show our competitive nature, yet display our unity to work towards a common community service goal," Blue said.

"Greek Week is not designed only for Greeks. It is to bring together all the constituencies on campus and to provide everyone with a fun and exciting, non-alcoholic event," Day said. "Furthermore, it is an excellent opportunity for freshmen to gain insight into the Greek system and to meet brothers and sisters to gain a better understanding of the Greek system."

IFC President Keith Hofmann '01 said, "The best part of Greek Week is that it allows Greeks to show what a major presence we are on campus."

"It also gives us an opportunity to show all the good things that one can become involved with when they become Greek, for example the Fort Discovery playground building project that Greeks will be participating in this weekend, or the many philanthropy projects that the various fraternities will be holding this weekend," Hofmann said.

Paige Call—The Bucknellian

Susie Schulte '01 performed for Kappa Kappa Gamma.

Public Safety Log

April 5, 2000

INFORMATION - Public Safety responded to Vedder Hall for the report of someone pounding on a room door. No witnesses or suspects could be located in a search of the area.

VANDALISM/THEFT - An employee reported to Public Safety that unknown person(s) had broken the front panel of the candy machine at Smith Hall vending area and removed six articles of candy/crackers. The incident is under investigation.

MEDICAL TRANSPORT - Public Safety responded to Tustin Gym for the report of an ankle injury. A Student Health Service driver transported the individual to Evangelical Community Hospital Emergency Room for treatment. The student later returned to campus.

April 6, 2000

UNDERAGE DRINKING/PUBLIC DRUNKENNESS - While on routine patrol, Public Safety observed an intoxicated student fall to the street on St. George Street. Public Safety and Lewisburg Police cited the individual, who was under the age of 21 years, for underage drinking and public drunkenness.

VANDALISM/CRIMINAL MISCHIEF - A student reported to Public Safety that unknown persons caused damage to three lampshades at the Delta Upsilon Fraternity. The incident is under investigation.

April 7, 2000

INFORMATION/FIRST DOCUMENTED TRESPASS WARNING - Public Safety responded to the dumpster at Hunt Hall for the report of a visitor removing wood from the dumpster. Lewisburg Police assisted in identifying the person who was advised that the University does not allow the removing of items from their dumpsters.

VANDALISM/THEFT - An employee reported to Public Safety that unknown person(s) did cause damage to a snack vending machine located at Smith Hall. The incident is under investigation.

INFORMATION/BU PROPERTY DAMAGE - An employee reported to Public Safety that a window in an exterior door of Roser Hall had been broken. No witnesses or suspects could be located in a search of the area.

INSTITUTIONAL VANDALISM - An employee reported to Public Safety that unknown person(s) attempted to pry open the roof hatch of Smith Hall. No witnesses or suspects were located in a search of the area.

INFORMATION/UNAUTHORIZED SOLICITATION - Public Safety responded to the Langone Center for the report of a student soliciting donations for an activity. The individual was not authorized for this program; therefore the activity was terminated.

April 8, 2000

CRIMINAL MISCHIEF - Public Safety responded to Larison Hall parking area for the report of damage to a parked vehicle. The incident is under investigation.

INFORMATION/BU PROPERTY DAMAGE - Public Safety responded to Swartz Hall for the report of a broken window. No witnesses or suspects were located in a search of the area.

INFORMATION/BU PROPERTY DAMAGE - Public Safety responded to Bucknell West for the report of a visitor's vehicle stuck on the field. Due to weather conditions, the van had to be left in that position for removal when the ground dried.

INFORMATION - The parent of a student reported to Public Safety that her daughter was involved in an altercation with a male at Chi Phi Fraternity. Public Safety contacted the student who did not wish to file a report at the time of the interview.

VEHICLE ACCIDENT - A visitor reported to Public Safety that a university vehicle had backed into his parked truck at Davis Gym. No injuries were sustained and damage was minor. Insurance information was exchanged.

MEDICAL ASSIST - Public Safety responded to Swartz Hall for the report of a wrist injury. Student Health Services transported the student to Evangelical Community Hospital Emergency Room for treatment. The individual later returned to campus.

ALCOHOL VIOLATION WARNING - Public Safety responded to Smith Lot to assist Lewisburg Police with a pedestrian stop of two students involved in a domestic argument. A warning was issued.

April 9, 2000

UNDERAGE CONSUMPTION - Public Safety responded to Vedder Hall for the report of a student passed out in another student's room. The individual, found to be intoxicated but not in need of medical attention, was removed to his room in the care of a visitor. Citations for underage consumption and trespassing were issued.

INFORMATION/WARNING ISSUED - Public Safety responded to Dana Connector Lab for the report of unauthorized use of a computer. The visitor was advised of the University's policy on use of private facilities and escorted from the building.

April 10, 2000

MEDICAL ASSIST - Public Safety responded to Swartz Hall for the report of an ill student. Public Safety transported the individual to Evangelical Community Hospital Emergency room for treatment. The student later returned to campus.

NON-EMERGENCY MEDICAL TRANSPORT - A student contacted Public Safety to request transportation to Evangelical Community Hospital Emergency room for treatment of an eye infection. Student Health Services transported the individual who later returned to campus.

CRIMINAL MISCHIEF - Public Safety responded to 7th St. Lot for the report of damage to a parked student vehicle. East Buffalo Township Police was notified. The incident is under investigation.

April 11, 2000

MEDICAL TRANSPORT - Public Safety responded to Swartz Hall for the report of a student with severe hip pain. The individual was transported by ambulance to Evangelical Community Hospital Emergency room for treatment.

INFORMATION - SUSPICIOUS INCIDENT - A student reported to Public Safety that someone had accessed her email account and punctured her vehicle tire. The individual did not wish to take legal action at this time beyond documentation of the incidents.

INFORMATION/VEHICLE DAMAGE - Public Safety responded to Coleman Road for the report of damage to a parked student vehicle. No witnesses or suspects could be located in a search of the area.

This Week in Bucknellian Headline History

Resignation of Mrs. Larison

April 13, 1897

Last Friday Mrs. Larison sent to the Board of Trustees her resignation as Principal of the Institute. When the rumor became current in the town everyone expressed surprise and sorrow. During the many years of her stay in Lewisburg, Mrs. Larison has won the warm friendship of all who knew her, and her name and personality are so closely associated with the Institute that her departure will be felt not only in the University but throughout the town.

Beside the warm affection in the hearts of all, Mrs. Larison leaves behind her a record on high scholarship and great executive ability. In 1867 Mrs. Larison, then Katherine P. Brown, was graduated at the Institute. After being instructor and acting principal, in 1882 she was elected principal. Mrs. Larison has the honor of being the first woman to receive an honorary degree from the University. In 1889 the University conferred upon her the degree, Master of Arts.

Clark Hinkle's Collegians Lose to Bison Varsity

March 16, 1933

Clark Hinkle, one of the most colorful athletes to ever sport the colors of the Orange and Blue, brought his own basketball team to Bucknell on Monday evening and received a 34 to 23 setback from coach John Plant's varsity dribblers in a contest that officially closed the 1933 basketball season for the Herd. Clark failed to garner a point in his return appearance being forced to surrender the scoring honors to his brother Lester who led the Collegians with nine markers.

Joe Reznichak led the locals in scoring, splitting the cords for four field goals and five fouls for a 13 point total. "Red" Mackenzie again satisfied the customers with a scintillating exhibition of elbowing, making five field goals and a foul to snatch the runner-up honors with 11 points.

Only two substitutions were made in the entire game and both of these were made by the visitors. The Bisons led at the half by an 18 to 13 score.

Four Tops Give Concert Climaxing IFC Weekend

April 13, 1967

IFC will present The Four Tops, Motown recording stars in concert at Davis Gymnasium tonight 8:30.

In keeping with the custom of past years, the nationally renowned singing group will present their performance as an opening to the annual IFC weekend. The concert will highlight this year's plans, as Sig Derby has been changed to April 29.

Organized in 1954 the group, composed of Abdul Fakir, Levi Stubbs, Denaldo Benson, and Lawrence Payton, is a close knit organization in which there is an unusual amount of cohesion. The group's popularity depends on this "hanging together" and nearly all their top recordings depend on a close harmony to achieve their sound.

The Four Tops are well known as outstanding and "class performers." In addition to their "Playboy Club" circuit dates they have toured Europe and have played such night spots as the Thunderbird Club in Las Vegas.

The Tops, who sing pop, country western, modern jazz, and rock 'n roll will have in their repertoire such recent Motown top hits as "Reach Out," "Baby I Need Your Loving," "Standing in the Shadow of Love," and "Burnadette."

Board Votes to Begin Construction

April 12, 1985

After hearing recommendations from the Residence Hall Planning Committee, the Executive Committee of the Board of Trustees unanimously voted in favor of constructing residence halls on Loomis field, located behind Roberts Hall.

According to Brenda Gordon, director of residential life, "no one on the committee was entirely satisfied, but the field site we would like to have is not available." The Committee's first choice was the land south of Fraternity Row. However, the owner, William Strohecker, rejected the University's offer to purchase as much of the land as he would sell at $10,000 an acre. Strohecker also refused to sell a 400-foot wide strip adjacent to Fraternity Row for $250,000.

In their plans for construction on Loomis Field, President Sojka and the administration help forums and listened to the concerns expressed by the Lewisburg townspeople.

The administration has instructed the architects to maximize the amount of "green space" and to help preserve the historical significance of the area by keeping the units as far away from Brown Street and the residences along the street as possible.

The Loomis Field dormitories and the planned freshman residence halls on Seventh Street will house approximately 250 students. According to Gordon, no increase in enrollment is expected. "The purpose of the new housing," Gordon stated, "is to relieve the overcrowding that we've been living with for a long time."

Construction for both projects will begin early this summer and should be completed by September 1986.

Compiled by Jim Leahy

CHOICE From Page 1.

block-book rooms for up to 12 students.

So what activities will CHOICE do? Some possible options include intramural sports, hiking, and yoga classes. "At this time we have not structured too much because we want to be able to get students feedback and talk with the CHOICE fellows," Arcelus said.

Everyone in the CHOICE program had to sign a contract which stipulated that they would like to live in an environment which will promote healthy lifestyle choices, and elect to live in a residence hall where tobacco and alcohol are not used and no drugs are used contrary to law or prescription.

The new CHOICE program was developed in part from the second Biannual Policy Review Committee (BARC II) in 1999.

One key point was a wellness/substance-free residence hall program proposal. In this report it was noted that it was important for colleges and universities to set up substance-free housing to send a message to the campus community that there are many students who choose not to engage in heavy drinking or drink at all.

According to the report, "establishing substance-free halls allow universities to respond to students' demand for quieter places to live and students will not be affected by second-hand effects of other students' heavy drinking."

According to Shaynak, "Residence life departments have the opportunity not only to engage students' interests through programming, they can also shape the physical environments in which these students live."

The Brothers of Delta Upsilon Fraternity will be holding the 85th Annual Demie Play on Saturday, April 15 and Sunday, April 16 in the Harvey Powers Theater.

Union letter scrutinized

Bucknellian exclusive UNION from page 1

cus feels is "misleading," "biased" and "coercive."

"When we read the letter (*see below left*), we were extremely disheartened," Sackrey said. "We felt we needed to respond."

"We'd like the administration to stop sending this letter and then also to consider putting in place a policy about union neutrality," Morris said. "These seem like logical steps for a university, a place that should be committed to freedom and justice, to take place. It is also a move that has been made by many other institutions."

The Caucus' letter to the new president (*see right*) claims that "the letter implies ... employees can't read well enough to know what they're signing when they sign it, that bosses know better than employees what the employees' working conditions are like, and, in a broader sense, that those at the top know what's good for employees better than the employees know it themselves."

Plympton was surprised that the letter was viewed as "intimidating," as was President Adams when the question was posed at the final "Yo Bro" Forum in March.

"What the letter was trying to capture was to make sure that employees have both sides of the picture, that they understand what the advantages and disadvantages of unions are," she said. "I think the letter ... provides information for the employees so that they have a complete picture of what unionizing can mean and what it can entail."

Plympton said that while no unions are currently represented on campus, no level of employment would be jeopardized through union membership. She believes that the University offers ample all-around benefits for its workers. "The traditional things that people think of about what you get with a union basically are present here already," Plympton said.

She said that joining a union could create a "dual relationship" for workers that can become more complex.

According to Plympton, a certain degree of "miscommunication" was alleviated when she met with the Caucus members. She explained that because of her constant interaction with Dining Services workers, she did not intend for the letter to create any level of discomfort.

"Although I'm very concerned that people would view the letter as intimidated, I would say that (the letter) is very far from being the only contact I have with Dining Services workers," Plympton said. "For me personally, for the employees, it's not some vague, amorphous vice president sending them a letter."

The Caucus, which also includes numerous students, hopes that the administration will reconsider these practices; it does not wish to speak for the workers, but rather to question the ethical standard by which the letter was composed and sent.

"Our goal is to have the President—the present one, or the new one—take the most honorable role possible in matters of economic justice on campus," the letter states. "A logical consequence of such a position would be at least not to send out misleading, patronizing, threatening letters every time employees come into contact with union organizers."

Paige Call—The Bucknellian

Professors Saundra Morris (left) and Charles Sackrey (right) created the BCEJ.

The Caucus' letter recalls the University's mission statement, which states, "The University recognizes, supports and respects the right of individual employees to express their own personal freedom of choice regarding union organization and membership."

The members believe that Plympton's letter directly contradicts this goal, and recommends following other universities in adopting a policy of neutrality toward unions.

Plympton said that the University does not have an official policy "on either side of the matter."

"It's not the kind of thing you have a policy about," she said. "It wouldn't be appropriate. It's really up to the employees."

No follow-up letter was sent to clarify any perceived intimidation. Plympton could not verify if a similar letter will be sent in the future, but did express her concern that the letter should be revisited to eliminate any air of coercion.

"I think I would want to be more clear that (the letter) is not meant to be intimidating," she said. "I think the information is important, so I want to be sure that the letter is expressed in a way that is not discomforting."

"I didn't ask at our meeting why it came up now, but my preference would be to move on," she continued.

Morris said that the Caucus' goal is "that the University ought not to discourage (dining services from joining unions), but let people make their own decisions."

Sackrey said, "Our hope is that the new president will take our invitation to think about these things on different terms (than they currently are)."

November 3, 1999
Dear Dining Service Staff Member:

You may have recently been contacted by the United Food & Commercial Workers Union, and you may have been given a union authorization card. The card reads, "I hereby authorize the United Food & Commercial Workers Union, Local 1776, AFL-CIO, to represent me for the purpose of collective bargaining." I recommend that you do not sign the authorization card.

Because this is such an important matter for you and for Bucknell, I want to take this opportunity to make some personal comments and observations.

1. I believe that Bucknell's wages, benefits, hours, and working conditions are fair and comparable or superior to other institutions and places of employment in the area, whether unionized or not. These things have been obtained without union representation in the past, and I believe that Bucknell will continue to be a fair and equitable employer in the future — even during difficult times (hiring and staffing pressures, etc.).

2. The presence of a union on campus could result in a lessening of individuality and the ability to speak for one's self. Bucknell has always been ready and willing to discuss problems and concerns directly with members of the staff. With a union, the union representative speaks for the staff members, whether the staff agree with what is said or not.

3. A union will charge its members annual dues, special assessments, and fines without being able to guarantee that it will be able to negotiate higher wages or better benefits and working conditions. I believe that Bucknell's employees have been, and will continue to be, better served without a union acting as a third party, and that we can continue to make Bucknell an even better place to work without you paying union dues.

4. Since a union can only negotiate with the University and cannot guarantee the outcome, strikes are always a possibility. In my opinion, everyone loses in a strike situation — staff members (through lost wages), students, faculty, and Bucknell itself.

5. Unlike you, a union has no interest or stake in the University. It is for these reasons and others that I recommend that you do not sign the union authorization card. My understanding is that if 50% or more of your fellow staff members sign the cards, the union will try to force the University to bargain with the union. This would be like signing a blank check. It just does not make sense to me to bring a union in to "get" the same good wages, benefits, and working conditions you already have.

If you have already signed and mailed the union authorization card, mistakenly thinking that it was only a request for more information, you can write to the union stating that the card was signed in error and ask that it be destroyed.

Please feel free to contact me or the Office of Personnel Services if you have any questions about this important matter. We want to be as helpful as possible, and to provide accurate information so that your decision is based on facts and not hopes. Please take time to think carefully and seriously about this important decision.

Sincerely, Margaret Plympton, Vice President for Finance and Administration

bucknellian@bucknell.edu

AN OPEN LETTER TO INCOMING PRESIDENT STEFFEN ROGERS AND THE BUCKNELL COMMUNITY

FROM THE BUCKNELL CAUCUS FOR ECONOMIC JUSTICE (BCEJ)

Mr. Rogers,

Earlier this year, members of the BCEJ, a student and faculty activist group, found that Bucknell's administration had sent a typical version of a corporate anti-union letter to dining service workers on campus. The letter — reprinted in the box to the right — was sent by Margaret F. Plympton, Vice President for Finance and Administration, after consultation with Bucknell's General Counsel Richard Zansitis, and with the approval of President Bro Adams. Because it is sent by those in power in order to influence the professional decisions of people whose livelihood they control, we find the letter to be objectionable, and embarrassing to Bucknell as an institution. In our opinion, the "observations" in the letter are not "observations," but intimidating acts of control.

Based on this reaction, on March 23, members of the BCEJ met with VP Plympton to voice our concerns. This letter to you, Mr. Rogers, like the letter we sent her prior to our meeting, is an appeal for Bucknell to begin in employment matters to occupy the high moral ground it should as a university, a stance it promotes in its own Mission Statement. As a step in that direction, we ask that, as one of your first actions as Bucknell's president, you officially STOP Bucknell's apparently customary practice of sending this letter. We would further urge you to consider additional steps Bucknell might take — discussed below — to make itself a more nearly just employer, thereby modeling to the community the principles of morality and fairness it claims to advocate. We come to these conclusions because of the following events.

How the Administration's Letter Came to Be Sent

Last November, Bucknell's administration discovered that a union organizer had been handing out "union authorization cards" to dining service workers, a practice protected by labor law. (As background, the purpose of these cards was to request a vote on unionization. If 30% of Bucknell's food service workers were to sign such a card, Bucknell could automatically agree to an election among workers about whether to unionize. It also could ask the National Labor Relations Board to hold a hearing to verify that dining service workers constitute what is called a distinct "bargaining unit," and that 30% of them signed the cards. If an election were held and over 50% of these workers voted to unionize, Bucknell's administration would be required by law to negotiate wages and working conditions with the union — in this case, Local #1776 of the United Food and Commercial Workers.)

Because such documents sprout wings of their own, when VP Plympton's letter was distributed, a distribution also protected by law, it came into the hands of some other staff members, students, and faculty members, including some of us.

Why We Object to the Letter from Bucknell

Our principal objections to VP Plympton's letter are as follows:

1. The letter is intimidating and condescending. Because it was sent by people in professional power to people under their control in an effort to influence a professional decision, the letter is by definition coercive. For example, imagine you wanted to join a work-related organization, and your boss wrote you saying that she thought it would be a BIG MISTAKE for you to join, and that if you've by chance already misunderstood and made that big mistake then you can QUICKLY TAKE IT BACK. In such a case, we suspect you would at least think twice about joining that organization for fear of endangering your job. Such would especially be true if matters at hand concerned the contracts drawn up among you, your boss, and your boss's boss.

2. The letter misrepresents itself. It pretends to be a personal response and is actually a stock document virtually identical to one sent out by VP Plympton's predecessor (Barry Maxwell) in 1997. It also pretends to be helpful communication, but because of the power relationship in place, it is an act of coercion.

3. The letter represents biased opinions as "facts". Although it claims to provide "facts" and "accurate information," the letter is filled with one-sided, misguided opinions. For example, the letter states that "everyone loses in a strike," an assertion that is ahistorical and ludicrous. Between 1970 and 1994, there were about 4,000 strikes in the U.S., with a total involvement of over 20,000,000 workers, demonstrating that the strike is an indispensable tool for workers in countering the overwhelming power of their employers. Had workers not possessed this tool, no doubt legislators, as they did in Massachusetts in 1858, might still be voting to "limit" the work of ten-year-olds to six, ten-hour days per week, and Boeing workers (who believe their recent strike was greatly successful) would never have left the job in the first place. It also claims that Bucknell already has "good wages, benefits, and working conditions," a "fact" quite easily disputable (and disputed) by various employees across campus.

4. The letter is misleading about employment structures and about unions. The letter contains a number of egregious misrepresentations of employer-employee relations. For instance, when it maintains that unions "could result in a lessening of individuality and the ability to speak for oneself," it implies, bizarrely, that current contracts with workers are drawn up by each worker's sitting down with the bosses in a push and pull session that ends up in the middle somewhere. In fact, an effort by an individual to speak for her own self-interest in these negotiations would be like a single street-clothed player facing a fully-outfitted football team. It is equally misleading when it argues that unionization involves granting the union carte blanche freedom that abolishes worker input into contract negotiation.

Our meeting with VP Plympton

When representatives of our group met with VP Plympton, she listened to our objections, but expressed surprise that anyone would be offended by the letter or find it coercive. She said that personal experience had led her to agree with the arguments in the letter about unions, and that she was only interested in providing what she thought to be information that the food service workers needed. She told us she would now discuss our complaints with the President and his advisers, and that she would be willing to speak with us again after that. She also agreed not to send another such letter before meeting with us.

President Adams's Response

When BCEJ members asked the President to comment on the letter at the March 23 student forum, he made clear his own approval, and described it as a means of "open communication," to give the workers "the other side of the story." The President also expressed surprise that anyone would be offended by this well-meaning attempt at open communication, not acknowledging how the power imbalance between the administration and the workers would inflect any such communication.

Is Our Response to the Letter an Endorsement of Unionization at Bucknell?

It is *definitely* not the point of our response to argue about whether unions are good or bad, or to agitate for union representation in the absence of staff workers' deciding to do that for themselves. Our goal is to have the President — the present one, or the new one — take the most honorable role possible in matters of economic justice on campus. A logical consequence of such a position would be at least not to send out misleading, patronizing, threatening letters every time employees come into contact with union organizers.

What Else Do We Think Ought to Be Done?

We suggest the following two changes in Bucknell's approach to its staff workers, as steps toward modernizing and civilizing its labor relations.

A Policy of Neutrality Towards Unions. Fairfield University (and others) have provided a guide to Bucknell's administrative leaders by adopting a policy of neutrality concerning union activity by employees. That University's guidelines for contracted work state in part that:

The University recognizes, supports and respects the right of individual employees to express their own personal freedom of choice regarding union organization and membership.

A Living Wage. People at Bucknell could also follow the example of many staff, students, and faculty at such universities as Harvard and Johns Hopkins, and organize a drive for a "living wage" for all campus employees. Under that policy, no one working here would receive less than (say) $10-12 an hour, or whatever hourly wage and benefit arrangement might reasonably be determined necessary for breadwinners to buy such essentials of modern life in a rich society as healthy food, pleasant and secure housing, good health care, and vacations. We estimate that there are between 125-150 food service workers and that more than half of them are casual workers, thus not eligible for benefits. Also, as a group, food service workers make the lowest average wages at Bucknell. No wonder they are seen by unions as potential members!

Policies such as a living wage and neutrality — like all such policies that give employees a decent wage and jobs with dignity — pay for themselves by improving the working environment, and thereby decreasing turnover and increasing productivity. For this reason and others, there is now a changing environment for labor relations at U.S. Universities. A recent article in The Chronicle of Higher Education (1/28/2000), and keynote speakers at this year's Modern Language Association conference, international scholars Pierre Bordieu, Edward Said, and Noam Chomsky, all advocate academic involvement in promotion of economic justice issues on campus. They see such involvement and policies that ensue from it as necessary components of the lofty commitment to fairness and justice that virtually all universities advocate in their various public documents.

Our Conclusion and Our Appeal

The principal administrators at Bucknell receive annual salaries ranging from about $125,000 to about $165,000 dollars a year, with benefits adding at least another $25,000 to each salary; hold advanced college degrees from prestigious institutions; and live lives of considerable economic privilege. These people sent out the letter in the box to people who make an average of about one-tenth their own salaries, whose jobs are working-class, and whose employment they control. The letter implies that employees can't read well enough to know what they're signing when they sign it, that bosses know better than employees what the employees' working conditions are like, and, in a broader sense, that those at the top know what's good for employees better than the employees know it themselves. It is at best uncollegial, and, to us, is much worse—patronizing, disingenuous, and coercive. As such, it is a disturbing indicator of the governance practices at Bucknell University and of the underlying views that shape them.

Thus, the BCEJ hereby urges you, Mr. Rogers (or you, President Adams), to consider taking this opportunity to begin a new chapter in the history of labor relations at Bucknell. Whoever does so will bestow upon himself or herself the great honor of being that president who first worked first to invert the power structure that exists at Bucknell and actually become the workers' ally in a fight for good and meaningful employment, and for living wages throughout the university. In this way, Bucknell would actually be living up to the lofty goals of its Mission Statement, especially the pledge, "to engage in institutional programs and practices that exemplify compassion, civility, and a sense of justice."

News Briefs

CIA Fired One, Punished Six in Bombing of Chinese Embassy

The Central Intelligence Agency said it fired one employee and disciplined six others for their roles in the accidental bombing of the Chinese Embassy in Belgrade, Yugoslavia, during the Kosovo conflict last year.

U.S. officials said punishment for those disciplined ranged from an oral warning to letters of reprimand, which preclude future promotions. An eighth CIA employee, assigned to another agency, also was expected to be reprimanded.

In a written statement released Saturday, CIA spokesman Bill Harlow said, "while we can never undo the mistakes that led to the bombing, we are satisfied that the CIA has stood up — both organizationally and individually — and taken appropriate responsibility for our mistakes."

U.S. - Chinese relations have been shaky since the bombing last May, which occurred during NATO's 78-day air strike against Yugoslav President Slobodan Milosevic and his forces. Three Chinese were killed in the bombing and 20 others were injured. U.S. officials said the intended target was the Yugoslavia supply headquarters.

Officials at the Pentagon tell CNN that no disciplinary action has been taken and none is expected in connection with the incident because the military believes the CIA is fully responsible.

EU Delivers Food Shipments to Horn of Africa Famine

Food to help relieve the famine in Ethiopia arrived in the Horn of Africa during the weekend and a further shipment is on its way, a European Commission spokesman said on Monday.

"Thirty-thousand tonnes of bulk food aid, European Union food aid, arrived in Djibouti yesterday and we're expecting another shipment of almost 17,000 tonnes to arrive before the end of the week," Michael Curtis told an EC briefing.

The United Nations estimates that some eight million people are threatened with starvation in Ethiopia, and a similar number face famine in neighboring Horn of Africa states hit by drought, crop failure and in some cases war.

The EU says it has plans to ship some 800,000 tonnes of food aid to the region this year but logistics for the operation are complicated by war between Ethiopia and its neighbor Eritrea.

Cuba Hosts Third World Leaders for G-77 Meeting

Scores of leaders from Africa, Asia and Latin America were headed for on Monday on Havana for one of the largest-ever Third World gatherings, intended to set a new, united agenda for narrowing global wealth inequalities.

More than 65 heads of state from the 133 member nations of the Group of 77 — so-called because of the group's 1964 founding with 77 members — were expected to attend the five day "South Summit" hosted by Cuban President Fidel Castro.

Issues of Third World foreign debt, unequal wealth distribution, limited technological access and lack of representation on international political bodies were expected to dominate the official agenda.

Although Cuba was acting as host, Nigeria, as current president of the G77, was chairing the meeting, the first full summit in the group's existence.

U.N. Secretary General Kofi Annan was due to fly into Havana on Monday night to attend the meeting. Some 80 international organizations, and 56 countries who are not members of the Group of 77 are also invited to the summit of the largest Third World coalition in the United Nations.

Eight Prison Guards On Trial for Staging Fights

Eight guards accused of staging gladiator-style inmate fights for their own amusement go on trial Tuesday in the biggest brutality case yet to come out of one of California's toughest prisons.

Four of the Corcoran State Prison guards face possible life sentences for the shooting of an inmate during one of the 1994 brawls, moments after a guard allegedly said: "It's going to be duck hunting season."

The trial has been a long time coming. The guards were indicted in 1998 after years of internal investigations, legislative hearings and a state grand jury probe produced no charges. The FBI accused the state of trying to block its investigation — a charge corrections officials denied.

Guards at Corcoran, about 40 miles (64 kilometers) south of Fresno, wounded 43 prisoners and killed seven others between 1989 and mid-1994. Only eight other inmates were killed by guards in the eight largest prison systems in the U.S. during that period, California Prison Focus said.

The defendants allegedly conspired to brutalize the prisoners by setting up two fights between rival gang members. FBI agent James Maddock has said that "it appears the fights were staged, even provoked, for the amusement of correctional officers or retribution against inmates."

Sigma Phi Epsilon welcomed back to campus

By Zach Davis

Eighty-two members of Sigma Phi Epsilon celebrated the culmination of three years of hard work, dedication, and determination to provide an alternative Greek experience for the upper-class men on campus; they got their charter back last Saturday, April 8.

The National Fraternity withdrew the chapter from Bucknell in 1993 due to a number of gross violations to national policy. At the time, the University and Sigma Phi Epsilon contracted for a return in 1997.

The alumni, over 800 strong, kept active in the years following. October 1997 marked the return of Sig Ep, with a strong class of 27 men. Three years later, Sig Ep is the second largest chapter on campus.

The foundations of Sig Ep stress a program attempting to demolish the image of the typical "frat-boy" stereotype of hard-drinking and anti-intellectual men that is prevalent today.

The Balanced Man Program is what makes Sig Ep different. The program promotes striving for better academic/learning achievement, leadership opportunities, importance of athletics, and a general emphasis on sound mind and body.

The Bucknell chapter has met these challenges by having the highest fraternity GPA on campus last semester, and is poised to repeat as champions in the Pangburn Cup intramural competition for the second consecutive year.

In the three years since its re-colonization, the chapter has also dominated the Greek God competition, with Landon Sulick '00 continuing his reign for one more year. The brotherhood, led by President Stephen Trempe '01, seeks to maintain this level of hard work in a broad range of areas in the upcoming year.

Courtesy of Kevin Ellis

The new Penn Chapter members of Sigma Phi Epsilon.

The black tie banquet to celebrate the newly re-chartered Penn Kappa chapter was hosted in the Terrace Room. Featured were words of wisdom from keynote speaker Bill Tragos, the Grand President of Sigma Phi Epsilon, as well as former Presidents John Littzi '00 and Bob Dineen '00.

Dean of Greek Life Roy Baker offered his congratulations and challenged the brothers of Sig Ep to maintain the principles and ideals upon which they were re-chartered.

The Alumni Board presented awards to the many dedicated alums who kept the chapter active even while the Sig Ep house on campus lay dormant. Ethan Lew '01 received the chapter's Balanced Man of the Month Award, presented to one brother each month for making an outstanding contribution to the chapter, for his remarkable efforts in coordinating the banquet.

The night was an emotional one for all in attendance, especially the senior class, who saw their hard work finally come to fruition.

P.U.L.S.E to protest Wal-Mart's sweatshops

By Kyle Menghetti

The student organization P.U.L.S.E. (Partnership for Unveiling Labor and Sweatshop Exploitation) is staging a protest Saturday April 15th, 12-2 p.m. at the Susquehanna Wal-Mart. P.U.L.S.E. is organizing a peaceful information session calling for better working conditions in clothing factories abroad.

The protest is a means for spreading awareness to the public about the terrible working conditions of the sweatshops that the products are produced in.

Many multinational corporations, like the superpower Wal-Mart, commit terrible violations of human and worker rights in the developing countries where they find the cheapest production possibilities.

A company like Wal-Mart travels around the world looking for cheap and plentiful labor, lax or no environmental regulations and tax breaks from cash-starved local governments.

In the "Race to the Bottom," corporations pit workers and communities around the world against each other. It is a reverse auction or sorts, with whoever accepts the worst wages, the most miserable working and living conditions, the fewest benefits and the weakest environmental regulations winning the right to work for and buy from Wal-Mart and other multinationals producers.

With all these multinational corporations lessening the standards for production and dehumanizing workers, why has P.U.L.S.E. chosen to target Wal-Mart? Wal-Mart is the largest retailer in the world and has a great amount of control over competition.

If we are able to move Wal-Mart to do the right thing, we can change how the entire industry operates, making it better for all involved.

Like other giant multinationals, Wal-Mart manufactures its private label clothing in at least 48 countries around the world, contracting production with tens of thousands of factories, 700 to 1,000 of which dwell in China. Wal-Mart's annual sales of $118 billion allow it enormous power in the countries and factories where their goods are produced, forcing competition over who will provide Wal-Mart the better deal and the lowest production prices.

Wal-Mart's $118 billion in sales and $3.3 billion in profits still send manufacturers fleeing to developing countries where workers are only paid 37-cents-an-hour with virtually no benefits. Wal-Mart is relocating to the south of China where it can get away with the terrible wages and unregulated management of sweatshops in the south of China.

In this move, Wal-Mart manufacturers are putting thousands out of work. In return, the new employees are in third world developing nations receiving horrifically lower wages, no benefits, no regulations, and excessive forced overtime hours.

Wal-Mart is actually lowering standards in China, as it moves its work to privately owned sweatshops that are booming in China's southern coastal provinces.

Wal-Mart and the other multinationals refuse to release to the American people even the list and addresses of the factories they use around the world to make the goods we purchase. The corporations say we have no right to this information

Yet, if consumers are hoping to shop with a conscience, it is our right to know in which countries and factories, under what human rights conditions and at what wages the products we purchase are made.

Sweatshop activists, like Bucknell's P.U.L.S.E. members, want to make this known to consumers so we can push to have this information made public so to ensure the safety of workers and make it harder to abuse children and operate sweatshops.

Come out Saturday April 15th at 12 p.m. to support this cause.

FEINSTEIN From Page 1.

Feinstein wanted to write his next yearlong project on a league that typically receives little national recognition.

"I received a call from him (in the Patriot League office), and he said to me 'are you sitting down?,'" said Todd Newcomb, Bucknell's director of Athletic Communications who, at the time, was Director of Media Relations for the Patriot League. "He said 'I want to write a book on the Patriot League.' I said, 'you're kidding, right?' It was kind of shocking at first.

"He wanted to write a book an kids who play basketball for the love of the game, not because they're trying to go pro. His book may not sell a lot of copies, but I got the sense that he felt it would be a really fun project to work on."

It wasn't until the Patriot League season started and he began traveling and working with players on a day-to-day basis, though, that he realized how different the Patriot League atmosphere was. His most recent basketball book chronicled a season in the ACC, so understanding Division I basketball in the Patriot League took adjustment.

"(While writing the book on the ACC), I found it impossible not to notice that the players there were simply pros in training," Feinstein said. "There was a feeling of 'I'm an ACC basketball player, so I'm entitled to something more.' I was much more comfortable with the kind of athletes that there are in the Patriot League."

Feinstein cited several examples of the type of player that he found so enjoyable in working on his Patriot League project. From discussing politics with some players to having down-to-earth conversations with others, he recalled being impressed with the type of student-athlete that exists in the league. In particular, Feinstein singled out a midseason Bucknell-Lafayette game-the day after the New Hampshire Primary-where players talked with him about John McCain's surprising victory. A player also chatted with him about an appearance Feinstein had made on political network C-SPAN earlier in the year.

"I'm not sure if many of the players in the ACC could even spell 'C-SPAN,' let alone watch it," Feinstein joked.

He attributed many of the differences between Patriot League athletes and athletes at bigger-name schools to what he refers to as a 'sense of entitlement.'

"At Patriot League schools, basketball players don't have their butts kissed 24 hours a day," Feinstein said. "Around campus, they may be recognized as members of the basketball team, but they're not worshipped. They certainly don't get the kind of privileges you get at a big time school. There's just a whole different mindset in the Patriot League."

Feinstein's books have mass appeal partly because they chronicle an insider's view of sports teams and personalities. In his previous works, Feinstein was able to get almost unlimited 'behind the scenes' access to, among other topics, Bobby Knight's Indiana Hoosiers, nearly all of the ACC basketball teams, pro golf's Major tournaments, and pro tennis tours. His Patriot League book will be no different. From the beginning of the season, Feinstein was permitted almost unlimited access to the Patriot League teams, attending everything from team meals to post-game locker room sessions. According to Bucknell coach Pat Flannery, Feinstein was not an intruder, but an often welcome addition to the Bucknell bench. In addition to his extensive scouting and campus research, Feinstein attended seven Bucknell games this season.

"My first instinct (when I heard he was writing the book) was, 'OK, he's a real famous guy, I've read his material, I'm certain he has to have a big ego, and I wasn't sure how he would react dealing with a lower Division I school'," Flannery said. "As it turns out, my perception couldn't have been further from the truth. He was a pleasure to have around. He was insightful and understood the game of basketball. He became a real friend to our program."

Flannery could also see Feinstein's love for the Patriot League and its players.

"We always talk about the student-athlete (in the Patriot League), and he got to experience what we mean first-hand ," Flannery said. "He would talk philosophy with some kids, then basketball with others, the job market, the stock market-anything. He really enjoyed being around the type of players we have here. He said that the reason he was writing this book was because this was the level he thought college athletics should be all about. He felt this story needed to be told."

Feinstein's book, which is slated for publication in Mid-November, concluded with Lafayette's loss to Temple in the first-round of the NCAA tournament. Feinstein returned to his more prestigious 'big-college' work with this year's tournament, but nevertheless looks fondly on his Patriot League experience.

"I was at the Final Four and taking in the experience there, and a big part of me wanted to run back to the Patriot League," Feinstein said. "I tell people it felt like I was taking a long shower all winter long. I really enjoyed this project."

GLOVER from Page 1.

The Lectureship Committee, having the choice of a few prominent speakers, finally decided upon the Glover and Justice presentation. Their aim was to bring a program to Bucknell that the students could relate to, but also one that was of cultural and social importance.

This will be the second time Glover has performed this show at the University. The second time was six years ago and it yielded one of the highest turnouts ever to a lecture style program.

Glover's presentation was chosen, partly due to its prior success at the University and around the country, and partly because "An Evening with Langston and Martin," fulfils the ideals and goals sought after by the Lectureship Committee."

"This evening is certain to be memorable. This is our chance to experience the power and strength of Martin Luther King and Langston Hughes. On the 17th, we will have the opportunity to experience the same power that our parents felt 30 years ago. As we go back in time and witness a resurrection of two of the greatest leaders in American history," promises Sarah EnDyke head of the Lectureship Committee.

The show will be held on April 17, 2000, in the Weis Center. Tickets are free for students with a BUID, and five dollars for members of the community. The doors will open at 7pm and the performance will begin at 8 p.m.

Following the performance there will be a reception which selected members of staff and student leaders will be invited to attend.

The Lectureship Committee worked diligently to bring Glover to our University, and it would not have been possible without the help of the multiple other groups that are co-sponsoring the performance.

These groups, which generously donated money and time to the Committee's effort to bring Glover here to Lewisburg, include The Multi-cultural Center, the Office of the Dean of Students, Bucknell Student Government, the Residential Colleges and the University Chaplain's Office.

Off-campus living compromised

The controversy arising from the eviction of six University students from 700 Market Street spotlights a growing problem—a new branch of negative town-gown relations that effectively deters from recent University and borough efforts to increase interaction and cooperation.

When students move to a downtown house, they expect their landlords to be responsible for the property. The owner, trusting that the student renters will abide by the lease requirements set forth before their occupancy begins, makes a similar expectation.

This year, many off-campus students are facing problems with their landlords, disputes that may very well end up in court. A number of these problems have emerged due to landlords blaming students for miscellaneous code violations like bursting pipes or deficient heating/cooling systems.

Many students have reported serious problems in their houses' structure, situations that are supposed to be repaired by the owners. In many cases, area landlords have been practically invisible to these pressing problems, at times blaming the students and leaving them to find a solution.

Undoubtedly, student-occupied downtown houses are generally in worse condition than those located in other parts of the borough. For years, many residents, skeptical of student behavior, blame Bucknellians for the poor condition of these houses. While there certainly is a degree of validity to such accusations, the community should not let a few bad apples spoil the bunch.

With the land-locked borough looking to capitalize on property value, many Lewisburg homes are now subject to tougher code requirements. Student houses are no exception. With this comes an imminent decrease in renter-occupied houses, and a subsequent increase in privately-owned and occupied houses.

Off-campus students already feel threatened by the police department and its new SCAT program, fearing that officers are always on the lookout to break up any party occurring in the vicinity of Sixth, Seventh, St. Louis and St. Catherine Streets. Now it seems that these students may become the targets of the housing authority and the victims of oppressive landlords.

These recent occurrences may intimidate students currently considering or pursuing off-campus accomodations, leaving them to worry about new constituencies that may become problematic.

While the Market Street eviction entailed numerous factors, the borough and its residents cannot ignore the presence of poor renter-owner relationships. *The Bucknellian* calls on local officials to understand these students' predicaments and exercise the utmost amount of fairness when dealing with any emerging problems.

bucknellian@bucknell.edu

Should the University offer a night shuttle to cut down on drunk driving?

Yes

By Ryan Delahanty

With the setting of the sun, college students across the nation decide what they are going to do for the night. At Bucknell, Wednesday's and the weekend usually calls for a healthy amount of drinking. For those of us that cannot go the bar, our remaining option happens to be downtown. Having such a large number of students congregated in a small area is a potential problem.

Usually, kids will drink there and stumble home hours later. The problem is what they do after they've finished partying and when they head home.

Right now, the only way for a person to get to their "home" is to either walk, or call for a safe ride. Usually, females make up a large percentage of those students who get this mode of transportation. Others suck it up and make the long trek back to their residences.

And another small minority does something else: they drive. Obviously, we all understand that this is extremely dangerous, so I offer a solution: setup a shuttle service.

The proposed route would start (or end) at the corner of 7th and St. Catharine's, to the Vedder circle, along Fraternity Row, to Swartz Hall, then the Mods. A shuttle would be operating on Wednesday, Friday, and Saturday nights 10-2.

If Public Safety sent e-mails and notices out to students, the route would become well known and the shuttle a popular mode of transportation.

There wouldn't be a need to buy an expensive brand new shuttle; we could use a Bucknell 15-passenger van.

Sure it sounds like an outrageous idea but think of the possibilities. Two strong arguments for setting up such a system are that it would alleviate the need for safe rides, and also it would curb drinking and driving.

As the safe ride system is setup now, one needs to call Public Safety, and have at least a few people with them in order to be picked up. If there were a well-established shuttle system in place, Public Safety wouldn't have to have drivers on standby.

The second issue a shuttle service would address was the drinking and driving problem. If students knew they had an alternative to a long walk uphill, or a far distance in inclement weather (snow, rain, extreme conditions), then I am sure they would take it. Instead of going downtown and driving back drunk, they could leave their care there overnight.

Additionally, this would help cut down the number of police that would need to be circulating downtown, which would save Bucknell and the Lewisburg community a lot of money.

I don't know if this will ever happen due to financial restrictions or the administration's opposition, but a shuttle for three nights a week sounds like a good enough idea to me. I mean if we can provide safe transportation and a reduction in drunk driving, well then I say go ahead.

No

By Rebecca Rowland

One of the first things they will tell you when you apply to the University is that it is a small campus. It is possible to walk from one end to the other in no more than 15 minutes. Many people chose to attend parties that are some distances from their residences—the Mods to downtown or Swartz to downhill, for instance. Although the walk to the party is not a problem, the walk back is always a struggle. For some.

While many students suck it up and walk back home, it has become all too common for some to drive drunk. This is an unacceptable situation that needs to be rectified before a serious accident occurs. I do not believe, however, that a campus-wide shuttle is the answer.

For one thing, the school already has a student-transportation system - safe rides. These run every night and travel to any location on campus. The necessity of safe rides and a shuttle seems minimal; perhaps revamping the safe-ride format would be more beneficial.

As it stands now, safe-rides are primarily to alleviate the danger of walking in small groups in the dark. This is the main reason as to why only three people are allowed to use a safe-ride a one time— any more people is considered a safe number to walk with. Allowing more people to ride in a safe-ride at once, therefore making the format conducive to alleviating drunk driving, would be a less time-intensive way to combat drunk driving.

Another reason to not institute a shuttle system is the problem of when it would run. While the majority of campus and downtown parties take place on Wednesday, Friday and Saturday nights, people still leave their dorms and drink on Thursday—in fact, there are chances of drunk driving every night.

Is it practical to run this shuttle every night? Or would the school be forced to pick nights where drunk driving was more of a priority than others? While this decision may seem like an easy one, pick Wednesday, Friday and Saturday, what happens when an accident occurs on Tuesday? The University cannot afford to play Russian roulette with student safety.

It is the priority of every college and university to curb underage drinking. One of the problems a shuttle would cause is it would project the image of condoning underage drinking. "Gee Mom, I go uphill and get really drunk and then the school comes and picks me up!" While earlier I said that safe-rides should be made more conducive to staving off drunk drivers, that still should not be the out-spoken purpose. While it is a little hypocritical to suggest that the school outwardly condone underage drinking and then secretly aid the drinkers, sometimes it is a matter of appearance and perception.

While in theory the idea of a shuttle sounds beneficial to the community, the ins and outs of it make it a far-fetched idea. As do the politics of underage drinking.

National Volunteer Week honors University students

By Nora Daniels

There are weeks celebrating animals, causes, special events and people. There are holidays for procrastination, for underappreciated employment positions and for unique activities. Most of these go relatively unnoticed by the majority of us, especially as we live for four years in the infamous "bubble."

However, once in a while, a special week or holiday does come along that we should not only know about but also celebrate. This is one of those weeks. And no, it's not something like 'free beer week' or 'national skip class day.' Instead, this week is National Volunteer Week.

This week which gives you a number of special opportunities to not only be appreciated if you are a volunteer, but also to realize how beneficial volunteering is to Bucknell and beyond.

The Community Service Team, a group of student interns advised by Asst. Dean of Students Ruth Burnham, held its annual Volunteer Recognition Dinner on Tuesday, April 11, as a way to kick off the week.

Students involved in a variety of aspects of community service on campus were invited and honored at this dinner, with guest speaker Bob Hormell of SEDA-COG talking to attendees about volunteering beyond college.

Also sponsored by the Community Service Team were multiple chances for students to glimpse the opportunities for volunteering in the local area.

Throughout the afternoon on Thursday, students could visit a few locations where Bucknellians have volunteered in the past. In this way, students could see where they might be able to be involved next semester and in the future.

Besides these structured events, National Volunteer Week has been a time for less formal displays of appreciation to campus volunteers. At the same time, it has been a week for encouragement, of present volunteers to keep up the good work, and to others who are not yet actively volunteering.

All those involved in community service at Bucknell know how rewarding and enjoyable volunteering is; these volunteers want you to know that you, too, can be involved.

If you are not aware of ways to begin your volunteering, feel free to contact the Community Service Office (x73573). If you are a current volunteer, thank you from all whom you benefit, directly or indirectly.

Guilty until proven innocent

Flaws in system call death penalty into question

By Josh Guyan

I wrote an article a while ago about a journalism professor at Northwestern who, with the help of his students, had gotten several death row inmates exonerated.

I argued that close calls such as those make it certainly possible that we have executed innocent people since the Supreme Court substantively reinstated capital punishment 24 years ago. The good possibility of executing an innocent person is a strong argument for revoking the death penalty.

Recently I have found myself in strange company in my opposition to the death penalty. First, Republican Governor George Ryan of Illinois called for a moratorium on his state's death penalty after the exoneration of 13 death row prisoners in Illinois since 1987.

Similar moratoriums are being considered in Maryland, Alabama, New Jersey, Washington, Oklahoma and here in Pennsylvania.

One governor who disagrees is Republican Governor James S. Gilmore III of Virginia because his state recently executed a man after refusing to test DNA evidence that could have exonerated him.

We can understand why Governor Gilmore wouldn't agree to a moratorium in order to study the fairness and role of DNA evidence in the application of capital punishment. I wouldn't want that on my conscience either.

Besides many Republican governors, Pat Robertson also recently came out in favor of a moratorium on the death penalty because capital punishment is applied in a way that discriminates against minorities and poor people who can't afford high-priced lawyers.

I would never have expected this to come from Mr. Robertson although there are many religious people who think God is the only one with the authority to take a life and therefore the state shouldn't be playing God.

Mr. Robertson has a good point. Besides the possibility of executing innocents the death penalty is applied in a racist manner. A black person killing a white person is 4.3 times more likely to receive the death penalty than if a black person kills another black or a white person kills another white.

If a white person kills a black person the odds are almost zero that the killer will get the death penalty.

Returning to the possibility of executing innocents, George F. Will is another conservative who has come out against the current application of capital punishment.

Besides making the point that capital punishment is a government program and thus doomed to horrible mistakes, he adds that this is not an issue where we can allow mistakes. Mistakes are final when it comes to the death penalty.

Will addresses the fact that since 1976 roughly 620 people have been executed and 87 condemned persons have been exonerated. That's one exonerated for every seven executed.

Those numbers lead to the almost certain conclusion that innocent people have been executed. He based his information and article on a book written by Barry Scheck, Peter Neufeld and Jim Dwyer called Actual Innocence: *Five Days to Execution and Other Dispatches from the Wrongly Convicted*.

The authors are also the founders of the Innocence Project, a group that uses DNA evidence to exonerate death row inmates.

Bills in both the House and Senate have been proposed to assure that defendants are competently represented and that potentially exonerating DNA evidence will be heard in court before a death sentence is carried out.

Unfortunately for the man in Virginia we may never know if the DNA evidence could have exonerated him.

If we find that it would have, then what?

President Clinton's veto indefensible

Partial-birth abortion bill leads to questions on morality, government debate

By Michael Boland

A notoriously immoral presidency just got a little bit worse. Last week, the House of Representatives passed a federal ban on partial-birth abortions, which President Clinton has promised to veto.

Partial-birth abortion is the practice by which a fetus that has passed the point of viability is partially delivered (feet-first), has his skull punctured and the brains sucked out in order to collapse the skull and facilitate extraction. It is, by all accounts, a gruesome procedure.

To quote Senator Daniel Patrick Moynihan: "[partial-birth abortion] is just too close to infanticide; a child has been born and it has exited the uterus."

The American Medical Association voted unanimously to condemn the practice as not only inhumane but medically unnecessary as well.

The ban on partial-birth abortions passed the House by a veto-proof 287-141. Unfortunately, the ban passed the Senate by a vote of 'only' 63-37; a substantial margin, but four votes shy of 2/3. So, the issue is once again dead (so to speak).

President Clinton's excuse for his veto is that the legislation 'only' provides exceptions for the exceedingly rare cases in which the procedure would be necessary to save the mother's life; there is no provision for protecting the woman's "health."

The reason that this exception is missing is that a generic exclusion for "health," mental, physical or emotional, would gut the measure, providing abortion doctors with a legal loophole that could conceivably be used to justify every partial-birth abortion they wanted to perform. After all, every pregnancy risks the mother's health in some sense.

President Clinton should be ashamed. Partial-birth abortion is not about the 'a woman's right to control her own body.' There is always a compelling government interest in protecting life, privacy or no.

Make no mistake—in this procedure the baby is half-in, half-out. One would have to wonder if

the fetus' head were to accidentally slip out of the mother halfway through the procedure, would he still be aborted?

Does his Constitutional right to life then apply, even if he is unwanted? I would hope so. What if a baby was to have one little hand still inside the mother? Is he alive then? Is he abortable, still technically 'inside' the mother? The ethical implications of this practice are chilling.

What amazes me most about the upcoming veto is that partial-birth abortion is not, like 'regular' abortion, a divisive issue. One does not have to be a fire-breathing conservative in order to abhor this practice. While public opinion on Roe v. Wade ('regular' abortion) usually runs about half-and-half, public opinion on partial-birth abortion is clear.

Opposition to it usually runs between 75% (cnn.com poll) and 90% (vote.com poll). In fact, 65% of American citizens who label themselves 'pro-choice' say they still oppose partial-birth abortion. You will find adamantly pro-choice Congressmen and Senators who, to their credit, at least voted to ban partial-birth abortion.

For example, in the latest vote the 364 legislators who voted for the ban included liberal Democrats Robert Byrd, Tom Daschle, Dick Gephardt, and Daniel Moynihan. This legislation was a bipartisan effort.

For all of the complaining that we do about politicians not responding to the will of the people, this is one case where our elected representatives did their job only to be foiled by a morally suspect president who either cannot or will not do what is right.

Our president is concerned about his legacy. We all know what it's going to be: one big, bad Monica Lewinsky joke. That's what the historians will concern themselves with, anyway. But at least that incident didn't cause any loss of innocent life.

This veto will. All things considered, one has to wonder which presidential act is the bigger atrocity.

Road rage

Construction hinders mobility

By Kristen Jancuk

I have tried to refrain from commenting on the parking and driving situation that has been a continual headache since I first set wheel on campus.

Obviously the "powers that be" have all the good parking spaces, so I don't foresee any changes in the future. However, this past week is the straw that broke the camel's back. Someone needs to whine about the situation and it might as well be me.

As you probably know, there are about five, maybe six, parking spaces on campus for all students. And to add insult to injury, there are approximately 3,000 parking spaces for faculty and staff. I counted.

Well, maybe I'm exaggerating, but it certainly seems that way. Especially at midnight when you can't find a single place to park that won't require you to wake up at 8:00am the next day to move your car.

It's not just the plethora of staff parking that seems a bit unfair but also the fact that the faculty lots are so close to the buildings they may as well be inside. Student parking, however, may as well be in Guam.

You would be probably have less of a hike if you parked at your house and walked. And I mean your real house, the one that's probably in another state, or at least another city.

You've got to park somewhere though, because driving around here isn't safe. The intersection at Moore Ave. and Seventh Street is like a big game of chicken every time you stop there. The laws of right-of-way do not apply.

In fact, it seems that most of the traffic laws that apply to the rest of the country are null and void here. 'Parking space' denotes any bare patch of land that your car will fit on whether it be a pathway or the middle of a field.

The middle of the street seems to be a perfectly viable place to stop your car and have a ten-minute chat while hanging out your window. And don't be fooled by the term "crosswalk." What it really means is "run really fast and you might not get hit."

Now, just as I was getting used to all this walking, coming to terms with the 10-minute circular tours around campus to find a semi-decent parking space and looking for a support group to control my road rage, all hell has broken loose on campus.

Everywhere I turn roads are blocked off, orange cones are jumping out of nowhere and Wednesday half of the only parking lot anywhere near my dorm was closed. What is this?

While this isn't a life or death situation, it certainly is inconvenient, and primarily for the students. You don't see any staff or faculty parking lots being blocked off.

I bet if they were then a student lot would be used temporarily and we would be sent back to Guam to look for a space. However, they didn't offer any additional parking for students when they shut down our lot.

I myself don't drive to class, but how can those who do be expected to be on time when they discover that their usual parking space is unexpectedly occupied by an orange cone?

In addition, in order to find another parking space they have to drive all the way around campus because half the streets are blocked off.

I've already mentioned the lack of driving skill that seems prevalent on campus. It only gets worse when we find a usually accessible road blocked off. We panic. We become irrational.

Driving on sidewalks and running down squirrels seems like a feasible alternative to our usual route down Seventh Street. It's utter chaos.

Obviously whatever work is being done that requires that these roads be shut down is of some importance to someone. However, with summer break a mere four weeks away, it seems as though this could have been put off until the students leave, for our sakes as well as those of the workers who have to deal with our inability to understand what the word "closed" means and the faculty and staff who have to listen to us complain.

This could be a story but instead it's a big gray box... Write for ops! Email jancuk@ or fick@

It's beginning to look a lot like... winter?

By Maren Johnson

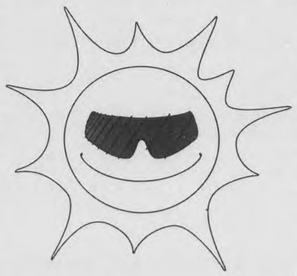
Ah, spring ... the birds are chirping, the flowers are blooming, and we're all freezing our—well, you know what you're freezing off. While the weather lately may seem like a trivial matter, what with Elian, Gore vs. Bush and the astronomical gas prices, but this is the opinions section and I most certainly have an opinion—I am in no way fond of this weather.

Just prior to our Spring Break, it seemed like we had exited winter early. The weather was unseasonably warm and lovely. When I came back, I was ready to jump the next plane back to the Bahamas (and believe me, after the death-defying flight my friends and I were on, that's saying a lot).

What happened to our premature, but much-welcomed spring weather?

It is not only frustrating that here we are in the middle of April and we're all clad in winter coats, but it's depressing too. I don't think there are many people who can honestly say that a warm, sunny spring day doesn't make even the worst of exams and papers a little more bearable. Here we are with about three weeks left of school and I'd swear I just got back from winter break.

So, this is what I think. Let's get rid of the five-day extended forecast. Turning on the TV



or logging on to weather.com and seeing nothing but 40-degree weather (at best!), overcast skies and rain in the forecast makes the weather we have today seem like a never-ending curse. If I didn't know better, I would swear there is a black cloud hanging over Bucknell.

Nevertheless, that is indeed the forecast for this weekend as of today. This is why I am proposing no more than a one day forecast. That way, we only have to accept our misery one day at a time.

However, if beautiful weather is heading our way any time soon I want constant reports, pre-empted programs, and headline news. If it's going to be less than 60 degrees, I don't want to hear about it. If it's going to be mostly cloudy, or even partly sunny, I don't want to hear about it. If there is a wind chill factor, I don't want to hear about it.

You get the idea.

I would suggest that we send a mob after Mother Nature and bind and gag all meteorologists, but that might be a little extreme.

You can help though. Get out there. Pray for sun. Do an ancient Mayan sun dance.

Do whatever it takes to get rid of the cold and bring on spring. I think we are more than ready for it.

RETIREMENT | INSURANCE | MUTUAL FUNDS | TRUST SERVICES | TUITION FINANCING

Deferring taxes with TIAA-CREF can be so rewarding, you'll wonder why you didn't do it sooner.

Call us for a free tax-savings calculator

One of the fastest ways to build a retirement nest egg is through tax-deferred Supplemental Retirement Annuities (SRAs) from TIAA-CREF.

With funds automatically deducted from your paycheck, you can easily build income to supplement your pension and Social Security.

And your contributions to SRAs grow undiminished by taxes until you withdraw the funds.[1] Add to that TIAA-CREF's solid investment performance, bolstered by our commitment to keeping expenses low, and you have more money working for you.

So why wait? Let us help you build a comfortable retirement today with tax-deferred SRAs. We think you will find it rewarding in the years to come.

INVEST AS LITTLE AS $25 a month through an automatic payroll plan[2]

IT'S EASY TO SAVE MORE THROUGH THE POWER OF TAX DEFERRAL

In this hypothetical example, setting aside $100 a month in a tax-deferred investment with an 8% return in a 28% tax bracket shows better growth than the same net amount put into a savings account.[3]

Athletes of the Week
Edwina Bourn '03 and Dave Pomfret '00*, who were named women's and men's ECAC Athletes of the week respectively. Bourn broke the school record in the 400m hurdles, while Pomfret dominated the javelin and pole vault.*

Bison find tough times against Holy Cross

By Andrew Bevan

If you examined the Bucknell baseball team's statistics so far this season, you would find it hard to imagine that its overall record is 13-18, because it has outscored its opponents by almost 30 runs.

"Nine of our 17 losses have been in one or two-run games. We have been winning easy and losing close," head coach Gene Depew said.

The Orange and Blue have had problems putting together seven innings of complete baseball, which hurt them in their series against Holy Cross this past weekend, in which they went 1-3.

After falling behind 4-1 after three innings in their first game versus the Crusaders, the Bison battled back in the bottom of fourth to get within one, thanks to home runs from senior tri-captain Frank Fresconi and junior outfielder Mike Ritz.

However, things fell apart for the Bison in the next inning as they committed two errors and were victimized by two wild pitches. Bucknell gave up five runs in the top of the fifth en route to an 11-4 defeat. Scott Perry '00 suffered his third loss of the year, despite striking out eight.

"Scott did not have one of his better outings," Depew said.

Ritz went 2-3 with a RBI for the Orange and Blue while senior captain Tyler Prout went 2-4 with an RBI.

"We did not get our hits when they counted. They (Holy Cross) certainly did," Depew said.

The Bison continued their series with the Crusaders on Sunday afternoon after waiting out an unexpected snow on Saturday night and found themselves faced with some tough wind conditions.

In a game which Depew said the team "should have won," Bucknell jumped out to an early 4-0 lead after the first three innings. After giving up three runs in the fourth due to a costly error and three hits, senior pitcher Ed Soley served up a three-run home run in the fifth, which led the Crusaders to a 6-4 victory.

Sweeney carried the Crusaders all weekend, going 7-7 with seven RBIs. "Sweeney really hurt us. He came up in situations when we had to pitch to him," Depew said.

The 3-4-5 hitters for the Bison—Prout, Fresconi and John DiBonaventura '01—carried the Orange and Blue, accounting for eight of the 10 hits on the afternoon and five RBIs. But there was little production from the rest of the lineup.

"There were a couple of times when we needed a hit and we did not get it," Depew '00 said.

The Bison looked to get back on track on Monday when they faced the Crusaders in another doubleheader.

In the first game, Depew said the Bison "played the way we needed to play," as they rolled to a 8-3 win. The Bison received a dominating performance on the mound from senior tri-captain Matt Potalivo, who went the distance, giving up just three runs on six hits. Potalivo struck out seven en route to his third victory of the year. "We got Matt's best pitching performance of the year so far," Depew said.

Bucknell was sparked offensively by junior outfielder Ian Joseph, who went 3-3 at the plate and connected on his first home run of the season, and Fresconi, who went 2-4 with three RBIs.

In the second game, the Bison fell behind 5-0 after two and a half innings. Yet, the Orange and Blue battled back in the bottom of the third, scoring three runs, with two coming off a two-run single from outfielder Kevin Eiben '01. The Bison got within one in the next inning, scoring a pair of runs. But the Crusaders countered this with a run in the fifth and three in the sixth to build a 10-5 lead.

The Orange and Blue were not done yet, as they rallied to put four runs across the plate in the bottom half of the sixth to cut Holy Cross's lead to one, 10-9. After silencing the Crusaders' bats in the top half of the seventh, the Bison put the tying run in scoring position at second with only one out in the bottom of the seventh. Unfortunately, the Bison were unable to get the run home and suffered a 10-9 defeat.

"It was a tough loss for us but I really liked the effort of our team," Depew said. "We really competed and worked hard to be in a position to win. We just did not get the base hit we needed."

Eiben and Prout both went 2-4 in the game and Ritz added a triple and a double.

The Bison took a break from Patriot League play this past Wednesday as they faced non-conference foe Millersville at home. In a game filled with a lot of offense, including 35 total hits and 32 total runs scored, the Bison, who fell behind by as much as nine, battled back. But it was not enough, as they lost by four, 18-14.

The Bison used six pitchers in this contest but swung the bats well, producing 15 hits. Offensive leaders for the Bison included Ritz, who was 1-4 with three RBIs, and outfielder Eric Fishman '02, who was 3-5 with two RBIs. Freshman R.J. Grant suffered his first loss of the year, which evened his record at 1-1.

The Bison look to recapture their winning ways this coming weekend as the Midshipmen of the Naval Academy come in for a four-game set.

"This is a crucial series for us. They have been one of our main rivals the past four years in the league," Depew said. "This series will be a large factor in the final standings in the league."

Tim Choate—The Bucknellian

Bucknell went 1-3 in a pair of doubleheaders against the Crusaders, and now prepares for a series with Navy.

Men's lax dumps #16 UMBC

Cheng's last-second heroics break 7-7 tie and lift Bison 8-7

By Mike Myers

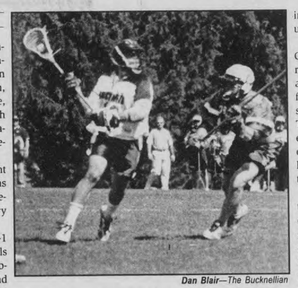
The #21 Bucknell men's lacrosse team captured a much-needed victory over UMBC on Wednesday, April 5. The Bison, who never trailed in the game, defeated the Retrievers 8-7 with a game-winning goal by Michael Cheng '01 just seconds before the time ran out.

The win marked a moment in Bucknell lacrosse history, as it gave head coach Sid Jamieson his 200th career victory (see article).

The Bison jumped to a 4-1 lead in the first half with goals from Ed Costello '00, Alex Gibson '00, Keith Poisella '00 and Brad Van Nostrand '00. But the Retrievers rallied back by netting three consecutive scores to tie the game. Poisella answered by notching his second goal of the game while the Bison were in a man-up, giving the Bison a 5-4 advantage.

"We had good patience and created good opportunities for ourselves," Jamieson said. "Our extra man team did a very good job and put us in a position to win the game."

Shortly after Poisella's goal, Cheng netted his first of two to give Bucknell a 6-4 lead. But UMBC refused to quit and came back to tie the game once again.



Dan Blair—The Bucknellian

The Bison will host league foe Colgate this Friday.

Gibson's second goal put Bucknell back on top, but the Retrievers' Collin Meerholz managed to score a man-up goal against the Bison - statistically the second—best man-up defense in the nation—to lock the score at seven. The Bison had a great opportunity to take the lead when they went on a man-up after a cross-checking penalty with just 1:14 left in the game, but they were unable to capitalize.

Off a perfect pass from Gibson, Cheng played the role of hero for the Orange and Blue when his shot found the net with just 4.5 seconds left. Brian Treacher '01 tied up the ensuing face-off long enough to successfully kill the clock and ensure the victory for the Bison.

"The offense was able to get the job done at the end because the defense got the job done," Cheng said. "It was a great feeling of satisfaction to help your team win a game at the end of regulation, but it truly was just a combination of tremendous effort from everyone that enabled us to beat the #16 team in the nation."

The Bison will next take to the field this Friday against Patriot League rival Colgate at home at 7:00 p.m.

"Colgate is very important for us," Poisella said. "Every Patriot League game from here on out is a must-win situation. We need to finish of the rest of our schedule with wins and get some help from other teams to make the NCAA tourney."

Jamieson gets 200th victory

By Mike Myers

Bucknell men's lacrosse head coach Sid Jamieson became one of only 13 Division I coaches in history to reach the 200 career win plateau on Wednesday, Apr. 5, when his Bison defeated UMBC, 8-7.

"I feel that it is a terrific reflection of the institution itself," Jamieson said. "I have enjoyed every minute of it."

"I deal everyday with bright kids who have a real enthusiasm to be good students and good players," Jamieson said. "This was really a credit of the guys who had to go out there and get it done."

Jamieson, now in his 33rd season at the helm, is the only varsity men's lacrosse head coach in Bucknell history. He graduated from Cortland State in 1964 and has guided the Bison to conference championships in 1969, 1978, 1985 and to the school's first-ever Patriot League Championship in 1996.

He won the General George M. Gelston Award in 1985 and received the Howdy Myers Memorial Award as college lacrosse's "Man of the Year" in 1986 and again in 1996.

Jamieson led the Bison to their first-ever undefeated season en route to the 1996 title. For this accomplishment, he was named the Patriot League Coach of the Year and the USILA National Coach of the Year. He also coached the North team to victory at the North-South collegiate All-Star Game in 1988.

At the University, Jamieson is a member of the Committee on Substance Abuse, the Athletic Department's Advisory Committee, the Discipline Review Board, the Gender Equity Committee, the Task Force on Diversity and the American Indian Focus Semester from the spring of 1997.

Jamieson has traveled all across the globe as a goodwill ambassador of the game. In 1994, his Bucknell team went on a two-week tour of Japan, where the Bison locked horns against the Japanese National Team and conducted a series of lacrosse clinics.

Jamieson has also been highly involved with the Iroquois National Team, serving as head coach from 1983-86. He guided the team to the 1984 World Lacrosse Games in Los Angeles and on a ten-day tour of England, which featured games against the English National team. Also in 1985, Jamieson took the team to the World Lacrosse Championships in Perth, Australia.

"This was really a credit of the guys who had to go out there and get it done."

Spotlight on club sports: men's and women's rugby

"All Blacks" gain national recognition

By Scott Roe

Last weekend the Bucknell men's rugby team closed its spring season by traveling to Mt. Saint Mary's for the Mid-Atlantic Championships, boasting a ranking in the top ten in the nation as well as second in the region. The All Blacks captured third place, finishing its season 14-3, with all three losses among teams ranked in the Division II top 25.

In the region semifinals, Bucknell lost a heartbreaker to national powerhouse Salsibury State, despite outscoring its opponent in the second half.

Scoring tries in the contest were captain Greg Manz '01, Mike Hornick '00, Mike Ievers '00 and Mike Morris '00. The second half surge was sparked by the all-out play of Joe Tierney '00, Keon Burley '02, Dawson Hodgson '00, Brian Berckley '01 and Jake "Chops" Frechette '00.

The All Blacks entered the second day of competition against a bruising Lock Haven team that handed them their first two losses of the season. Switching to a ball control offense from its usual kick-and-chase style of play, Bucknell came out right from the start with intensity sparked by the play of three rookie starters. The All Blacks entered into the second half up 12-5, thanks to the play of Geoff Sargent '00 and Colin Swank '03, who helped Bucknell keep possession effectively.

Lock Haven surprised the All Blacks in the second half with two quick scores, pulling out to a 15 -10 lead. With about ten minutes remaining, it was time for a back line made up of all seniors to take over the match. Marcus Hernandez '00 plowed through would-be tacklers to score a try through a hole created by a fake by Mike Vandever '00 and a perfect pass from Morris.

The Bucknell pack stole the ensuing kickoff thanks to a great kick by Piers Causton '01. Morris received a "mill" pass from Hernandez and, slashing around the outside, he scored the final score of the game with the help of support from Mike Kagey '00. This gave the All Blacks a 22-15 victory, earning them a third-place finish in the Mid-Atlantic Rugby Championships.

The Bucknell All Blacks would like to thank all their seniors for their four years of dedication and the student body for its support through a truly magical season, which was the most successful in recent school history.

Women experiencing some growing pains

By Katie O'Connell

The Bucknell women's rugby team plunged into its 2000 spring season with a tough loss to Penn State last Tuesday night and an upcoming match against Bloomsburg this Saturday. With half of the starters spread across the world on various abroad programs, the veterans players have been working hard to teach the rookies the fundamentals of the game.

A 31-7 loss to Lock Haven on April 1st jolted Bucknell into action to prepare for the spring season ahead. The season has been a bit of a struggle for the inexperienced Bison, especially since they have been playing without the proper equipment. The University has not offerd funds for either shorts or socks; the safety of the game is threatened without these essentials.

However, the team remains optimistic and prepares for its upcoming matches despite these drawbacks.

Last Tuesday night the Bison fell to the Penn State Nittany Lions, 15-5, with the lone Bucknell try by Dana Brown '03. The game proved challenging with the rain pouring down and the Bison resorting to a shuffled lineup as a result of a number of absences.

The Bison came out strong and ended the first half behind by only a try. Yet in the end the team could not contain Penn State.

Although the women's ruggers have encountered some trouble early on, their improvement from one game to the next is amazing. The team awaits a competitive match on Saturday against Bloomsburg.

Carolyn Hyman—The Bucknellian

The ruggers are hoping to build for the future.

NFL Draft bleeds Nittany Lion blue

Courtney Brown and LaVar Arrington figure to go one-two in the NFL draft.

By Ali Ahmed

There is still a lot left to be played out in this Saturday and Sunday's NFL draft. But despite uncertainties concerning trades and star players' falling stocks, one thing remains certain—the Penn State duo of Brown and Arrington will be at the top.

1.Cleveland: Courtney Brown DE, Penn State

As an expansion team, Cleveland obviously has many needs to choose from. Early on they had their eyes on Warrick, but the Penn State duo of Arrington and Brown moved up on the board with strong workouts. Cleveland will go with Brown because such a dominant defensive end is very rare to find. However, Arrington would be an excellent alternative.

2. Washington: Lavar Arrington LB, Penn State

For only the third time in history, two teammates will go one-two in the draft. Washington hopes that Arrington falls to them. Even though Brown would be very welcome the Redskins have a lot of money invested along the defensive line and their linebackers are very mediocre. Arrington is the perfect playmaker the Redskins need on defense.

3. Washington: Chris Samuels OT, Alabama

A lot of people are surprised that Warrick will fall past the top three picks, but when there is the choice of a dominating left tackle and a dominating wide receiver the choice is the left tackle every time. Just see what Boselli and Pace have done for their respective teams. Also, the Skins need a left tackle to replace Andy Heck.

4. Cincinnati: Peter Warrick WR, Florida

This is one of the hardest picks to make because both RB Dillon and WR Pickens want out and may be traded. Out of the two, Pickens is more likely to get traded and—even if he is not—the Bengals are tired of his whining. Warrick might also be the best available athlete.

5. Baltimore: Thomas Jones RB, Virginia

Baltimore has two big needs offensively at wide receiver and running back. They like WR Travis Taylor but he would be a reach at the number five pick. With lots of depth at the wide receiver position and the Ravens picking again at 10, a running back makes more sense here. The Ravens should pick Thomas Jones, who, although small, is a complete back. If Jamal Lewis is cleared of lingering affects of his injury, he might be taken here instead.

6. Philadelphia: Corey Simon DT, Florida State

The Eagles could look at Plaxeco Buress here, but after he missed a meeting with the team, the Eagles might look for receiver help later in the draft. The Eagles could also use help at tight end, but Bubba Franks' stock has dropped rapidly. Corey Simon impressed the Eagles at a recent workout, and the team is optimistic about his recovery from injury. If Simon performs as predicted, he would give the Eagles defense a big boost.

7. Arizona: Shaun Alexander RB, Alabama

The Cardinals have the making of a good offense but are lacking at running back. If Baltimore takes Jamal Lewis then Thomas Jones could be taken here but the Ravens would be happy with Shaun Alexander, who is another complete back who performed well in college. I really don't see the Cardinals drafting for another position unless they take linebacker Brian Urlacher from New Mexico.

8. Pittsburgh: Plaxeco Burress WR, Michigan State

Even though Pittsburgh does not traditionally take players with questionable attitudes, the Steelers have made a few changes in the philosophy of their front office. Thus, Burress might be too good a player to pass up. However, WR Joey Porter intrigues the Steelers, who could trade down to take him later. If Burress is gone, the Steelers may take Corey Simon if he is available or might even take Thomas Jones and release Jerome Bettis. Rumors of Chad Pennington are just smoke screens.

9. Chicago: Brian Urlacher LB, New Mexico

The Bears have three major needs they should try to fill at the draft. The first is outside linebacker and, if Urlacher is available, they will probably be hard pressed to pass him up. John Abraham from South Carolina is also a possibility. A wide receiver is a possibility also here but, unless Burress is available, the Bears will probably wait for the second round—especially since their offensive system can make decent receivers productive. Safety is another need but no safety is rated as high as the ninth pick.

10. Baltimore: Travis Taylor WR, Florida /
Denver: John Abraham LB, South Carolina

Baltimore might trade its 15th and 45th pick to Denver for its 10th pick. The reason might be that the Ravens are really big on WR Travis Taylor, who has been moving up on many teams' draft board. If so, Baltimore would have addressed its two major needs of the off-season. If Denver does keep the pick, they will probably take OLB Abraham since they have no major needs otherwise. Pennington is a possibility although unlikely with the 10th pick. If Denver has the 15th pick, look for them to select Abraham or go for TE Bubba Franks.

Bison top Towson, 5-4

By Carmen Mauriello

The Bucknell women's tennis team posted a 1-1 week to move its overall record to 4-6, overcoming Towson, 5-4, but falling to nationally-ranked Bloomsburg, 7-2.

These non-conference matches served as excellent tune-ups for the Bison's crucial Patriot League match-up against Lehigh this Saturday.

The Bison came out strong in the Towson match, capturing four of the six singles matches. Winners included Jill Wurzburg '03, Tracy Honko '00, Laura Maisel '03 and Kary Wolford '02.

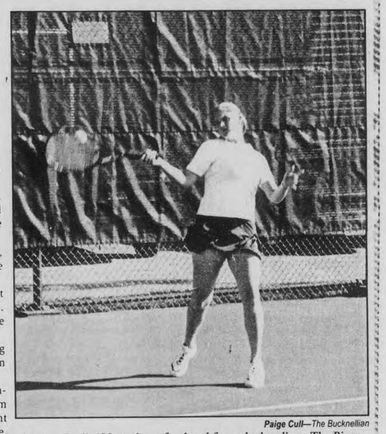
"I always feel that we do well because of the depth of our lineup," head coach Rebecca Helt said. "And that showed here, as we won at the number four, five and six doubles positions."

At a point in her number two singles match, Wurzburg was down a set and was trailing 5-2 in the second set.

In a remarkable comeback, she captured the next five points and cruised to a 6-3 win in the third set. This proved to be a pivotal point in the match for the Bison.

In doubles play, Honko and Maisel posted a strong 8-1 victory at the number three position, making them Bucknell's only double-winners for the day.

"The win over Towson was a tremendous accomplishment," Kristen Inglis '02 said. "We lost to them badly last year. And by beating them, it proved a point that we are capable of anything. The potential is there, we just need to work on everyone performing to their potential together in one match."



Paige Cull—The Bucknellian

Kristen Inglis '02 strokes a forehand from the baseline. The Bison look to a home Patriot League match against Lehigh this Saturday as a tune-up for the Patriot League Championships on Apr. 29-30.

The Orange and Blue headed to Bloomsburg last weekend for what was supposed to be a quad-match, but, because of the inclimate weather, two teams backed out and the Bison were left with a dual match against the Huskies, who are ranked in the top 15 nationally in Division II.

The Bison took four of the six matches to three sets, but only Kelly Dzialo '03 was able to pull out a victory. Dzialo, a former junior varsity player, dominated the clinching third set, 6-0, in capturing the win.

"We needed to play a third set as strong as our comeback second set, but we didn't," Helt said.

In doubles play, Honko teamed up with Wurzburg to edge their Bloomsburg adversaries, 9-8. The match came down to a tiebreaker, which the Bison duo captured, 7-4.

The Bison now focus on their Patriot League match against Lehigh at home this Saturday. The Bison will need outstanding performances from all six starters to defeat their rivals.

"Lehigh's the one that we need to see everyone come together and play their best tennis all at once," Helt said. "We've been able to identify our weaknesses in singles and doubles and make improvements; it's just a matter of coming out strong."

After Lehigh, the Bison will have three matches—one being against league foe Army—before heading to the Patriot League Championships at Army on April 29-30.

Sports

Women experience ups and downs

Follow 7-5 victory over Drexel with 13-5 defeat to Lafayette

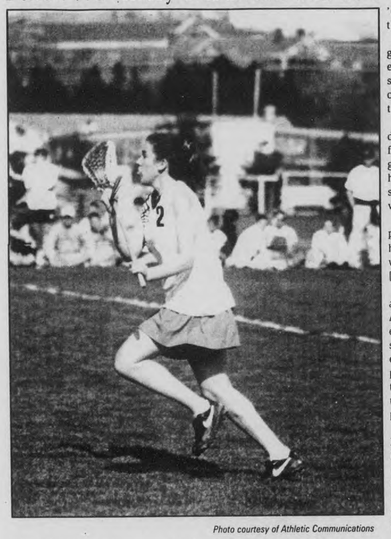

Photo courtesy of Athletic Communications

Krista Gerhard '00 threatening on the attack for the Bison. The Orange and Blue prepare to play league rival Lehigh this Saturday at home, with their overall record standing at 4-5 and 1-2 in the Patriot League.

By Chuck Vicente

Some days you're on, and some days you're simply off.

Last Thursday, the Bucknell women's lacrosse team edged out an important victory over Drexel only to fall by a huge margin to Lafayette three days later.

On April 5, the Bison faced the Drexel Dragons in what proved to be a hard-fought matchup. Suzanne Raffaele '03 began the scoring for the Bison when she found the back of the net in the first minute of play. Bucknell went on to score two more goals before the end of the half to take a 3-2 lead into the break.

In the second half, Bucknell turned on the heat and scored three more goals to make the score 6-2. Drexel did manage to net three more goals to cut the deficit to two goals, but their attempts to tie the game were shut down by Bucknell keeper Nicole Kallis '03, who had 14 saves on the day, and the Bison closed out the 7-5 victory.

Bucknell's offense was led by Raffaele, who had an oustanding day, tallying six goals. Ashley Evans '01 scored one goal for the Bison, while Melissa Montefusco '02 dished out an impressive three assists.

"I thought we played a very good second half against Drexel," head coach Barb Jordan said. "We had some nice plays on both ends of the field and through the midfield."

Raffaele is gaining confidence and emerging as a key offensive contributor, and her six-goal performance demonstrated her overall potential. "I think she will continue to improve with each game," Jordan said.

Raffaele is humble about her performance on the team crediting her teammates. "I was set up very well by Melissa Montefusco [against Drexel]," she said.

Bucknell's next game was against the Lafayette Leopards. As the Bucknell defense found out early on, the Leopards offense was solid. "Lafayette is so deep that even if you can shut down a couple of their stronger players, they have others who can step up and take control," Jordan explained.

In the first half of play, Lafayette dominated the game; Evans was able to score a goal 10 minutes into the contest, but the Leopards led at halftime 11-1. Confidence seemed to be the missing link for the Orange and Blue in the first half.

In the second half, Raffaele tallied an early goal, which was quickly matched by a goal from Lafayette. Evans then scored another goal followed by two more goals from Raffaele, but it was not enough to make up the huge deficit, as Bucknell fell to Lafayette, 13-5.

The Bison initially played tentatively, and Lafayette capitalized. Bucknell was more competitive in the second half, but it was too late.

The loss on Saturday puts the Bison's record at 4-5 overall and 1-2 in the Patriot League. Their next game is at home this Saturday against league foe Lehigh at 1:00 p.m. Hopefully, with a week of recovery, the Bucknell women's lacrosse team can gain back its momentum.

Bison struggle through week

Fall hard to elite foes Navy, St. Bonaventure and GW

By Mike Brophy

This past week did not prove to be beneficial for the Bucknell men's tennis team, as it dropped all three of its matches. Competing against Navy, St. Bonaventure and George Washington, the team collectively claimed only two singles wins for the week.

Facing Navy on Friday was the beginning of a long weekend for the Bison. Navy, one of the stronger teams in the Patriot League with a record of 12-10, certainly showed its prowess against Bucknell.

"We played very good teams, and we didn't play very well against them."
— Bob Hammerlee

Down 7-0, the only win for Bucknell came from juniors Aaron Webster and Jeff Gould at the number three doubles position.

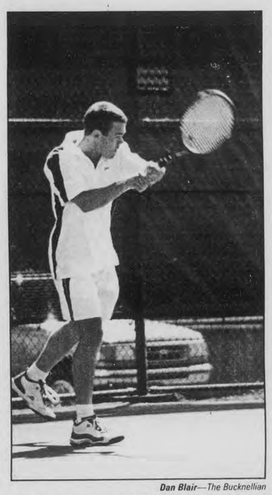
On Sunday, Bucknell visited St. Bonaventure for a doubleheader against the host team and George Washington. Going indoors to play, Bucknell fell to St. Bonaventure 6-1.

Team captain and number one player T. K. Kelly '00 did not play due to a pulled muscle suffered during his match with Navy. Gathering the only victory for the Bison was Jake Zelnick '01, who won 6-1, 6-0 at the number six singles spot.

A similar scenario panned out in the Bison's match against George Washington, as BU lost 6-1. In this match, the only victory came from freshman Todd Jacobs, who has proven to be the Bison's most consistent player this season with a singles record of 7-7.

Coach Bob Hammerlee was disappointed with his team's performance over the week. "We played very good teams, and we didn't play very well against them," Hammerlee said.

Bucknell is back in action this week with two Patriot League matches against Lafayette and Army. The team is hoping to return all of its injured players and regroup. Kelly is expected to return and junior Hayes Hopple, who has been out the entire season, may begin action this coming week.



Dan Blair—The Bucknellian

Alex Davydov '02 and th Bison hope to turn their situation around against Lafayette and Army.

Give the little guys a chance

By Rob Schmicker

With the trading of Ken Griffey Jr to Cincinnati, most eyes this summer will be on the power hitting NL Central, where Mark McGwire, Sammy Sosa, Jeff Bagwell and Griffey are all capable of hitting 50 home runs. Other people will be watching the New York Yankees, who look to win their fourth World Series ring in five years. And still others will be keeping their eyes on Atlanta, where Andres Galaragga is trying to make a successful return from cancer and John Rocker is still under fire.

But no one will be looking at the low-budget, small market teams like Kansas City, Minnesota, Montreal and Pittsburgh, as well as some of the also-rans like the Chicago White Sox, San Diego and Florida. It's a shame though, because these teams play the game like it's meant to be. Their up-and-coming players love the game and give everything they have—and not just for the money.

So instead of looking at the big names, lets give some of these lesser-known players some well-deserved attention and what help they need to turn their losing teams into contenders.

Washington Bryan Remicorz

Vladimir Guerrero: Expos' 23-year old future star batted .316 with 131 RBIs in '99

Vladimir Guerrero, Montreal: Last year, Guerrero started off slow, but still finished with a .316 batting average, 42 HR's and more RBI's (131) than Bagwell, Chipper Jones and Alex Rodriguez. He is one of the few bright spots that Expos fans have to cheer about (the few that are cheering—*see page 14*), but, outside of Montreal, not many people know of him. He ranked in the top 10 in 11 NL offensive categories last year at only 23 years of age. But unlike many of other young talents that Montreal had to let go (Pedro Martinez), the Expos have Guerrero signed until 2003 because he has so much potential (even though his defense could use some improvement). They know he is the future, and they had better start to build the team around him if they want to be competitive.

Brian S. Giles, Pittsburgh: Giles came over from Cleveland for Ricardo Rincon during the 1999 off-season and put up numbers that no one thought possible. Besides playing stellar defense, Giles hit .315, with 39 HR's and 115 RBI's. And those numbers came in a season when cleanup-hitter Kevin Young and leadoff hitter Jason Kendall were injured. With those two healthy this year, Giles should prove that last year wasn't a fluke. But young hitters can only bring you so far. Pittsburgh's pitching staff needs to be solid in order for the young Pirates to win some games in the tough NL Central.

Jeromy Burnitz, Milwaukee: It seems as if Milwaukee has been rebuilding for years now, but being a small-market team normally doesn't allow you to sign free agents. When the Brewers traded for Burnitz, no one thought that he would amass 98 HR's and 313 RBI's in his first three full seasons in Milwaukee. With newly acquired Jose Hernandez and Geoff Jenkins hitting around him in the line-up, he might even put up better numbers this year. Burnitz's weak link is that he strikes out too much.

The Brewers need some pitching—which they unfortunately don't have—so it will be a long year again in Milwaukee.

Eric Milton, Minnesota: The word is already out on Brad Radke, but southpaw Eric Milton provides the Twins with another great arm. Milton came over from the Yankees in the Chuck Knoblauch trade a few years back, and last year he threw a no-hitter against the Angels. His 7-11 record last year was very deceiving because he often gets little run support.

He pitched extremely well in the second half of last season, which has raised expectations for this year. He should have a good year and an even more promising career, but the Twins have to be sure not to overwork him, since young pitchers are very susceptible to injury.

Johnny Damon, Kansas City: Just by watching Damon play, you get the sense that he loves what he is doing. He is a gritty player, who hit .307 with 77 RBI's and 36 stolen bases last year, while playing excellent defense in left field. With 100 RBI men Carlos Beltran, Jermaine Dye and Mike Sweeney behind him, the Royals will score plenty of runs. But like the Twins, they have no pitching.

Magglio Ordonez, Chicago White Sox : Last year Frank Thomas was in a slump, so little-known Magglio Ordonez filled in for him admirably. He hit .301 with 30 HR's and 117 RBI's as the team's cleanup hitter.

Thomas has vowed to have a better season this year and that could prove deadly for opponents, as the top of the batting order will be very productive. Throw in some young and talented pitching and the White Sox could challenge the Indians in the future. For now, they will be second tier in Chicago because of that guy named Sosa.

Of course there are many other players that deserve some notoriety as well. A few are Florida's Preston Wilson, Oakland's John Jaha, Jason Giambi and Matt Stairs and San Diego's Phil Nevin. The thing that makes all of the above special is that they play at with everything they got for losing teams that are often out of the playoff picture by May.

No one likes to lose, but they are mostly just happy to have their chance to be a part of America's pastime. They're never the lead stories on Sports Center, but sometimes they deserve to be. So next time you watch any highlight show, stick around and watch the end of the show and catch these under-appreciated stars. They deserve your attention.

NBA *Experts'* Picks

By Justin McCarthy and Ali Ahmed

Indiana at Miami

This game may very well determine the number one spot in the Eastern Conference playoffs. Miami leads the series 2-1, but Indiana holds a one game lead on them for home court advantage throughout the playoffs. With four games each remaining, Miami has to play four playoff-bound teams, while Indiana will have its hands full with three playoff teams. Indiana has not won at Miami this season and it has had trouble all season long away from Market Square arena; 21 of Indy's 26 losses have come on the road. The Pacers have only won two away games against all the teams that have clinched playoff berths in the East. The Pacers will need Reggie to lead the way just as he has done his whole career, but they will also need Smits to control Mourning, who has consistently burned the Pacers this season in the middle by dominating the boards and scoring almost at will at times. The matchup to watch in this game will be between Mashburn and Rose - who is emerging to his full potential this season and becoming a force in this league. The Heat will depend on Hardaway to lead their attack and to stifle the attack of the Pacers by shutting down Jackson.

Justin's pick: Heat by seven

These two teams are as expected to fight for supremacy in the Eastern Conference playoffs. Both are well-coached, veteran teams which might face dismantling in the off-season. It is time Mourning steps up his game and plays consistently; everyone knows he is very capable of dominating every game. On the other side of the ball, Jalen Rose is having a career year and presents matchup problems with his size and speed. Rose is actually averaging more shots then Reggie Miller, which shows how much confidence his team has in him. This game might come down to which star from last year steps up. Can Tim Hardaway regain the skill he possessed in the past or can Reggie Miller once again return to become the sharp shooting demon of the past! I say it is time for Riley to look for a new point guard.

Ali's pick: Pacers by four

New York at Toronto

For some reason, the Knicks cannot seem to figure out the Toronto Raptors. In this matchup of likely first-round playoff foes, the Raptors have dominated the Knicks in three previous games — winning two of them by double figures and losing the other one by a single point. The Knicks simply have no one who can match up with the versatile and explosive Carter. He is too fast and too big for any of the Knicks forwards to handle (too fast for Camby and Johnson, and too big for Sprewell). The Raptors, however, are too one-dimensional. They rely totally on Carter for their scoring and they lack a consistent and established second threat. The Knicks have too many options — compared to the Raptor's one — for Toronto to handle. If Ewing is able to establish his presence in the paint and open the floor for Sprewell to drive and Houston to spot up, expect the Knicks to muzzle Carter and his Raptors.

Justin's pick: Knicks by four

New York fans were ecstatic to see Ewing hit the game-winner against the Pacers, and they were all to quick to claim that Ewing was back and was that New York was ready to take over the East. Well, sorry but doesn't anyone remember how many clutch shots Ewing has missed in his glorious career? Too many to remember, huh? Everyone needs to realize that Ewing may be dominant again teams lacking proper centers but, in the playoffs, he will struggle especially in the clutch. It is time the Kicks realize that Sprewell and Houston are their only hope. Toronto after making a surge a couple of weeks back has struggled recently. Although Carter has put up the points, he needs to shoot a better percentage and get his teammates involved. McGrady has especially been putting up big numbers across the stat sheet. The Raptors have the athleticism and rebounding to compete with the Knicks,

Ali's pick: Raptors by 12

Detroit at Philadelphia

Detroit has been able to win two games at home against the Sixers this season, however, they lost in Philly earlier this season by a single point. Even though the Sixers have only beaten the Pistons one time this season, and by less than a bucket in that, they will prevail in this one due to one major factor: Kukoc. The Pistons have yet to play the "new" Sixers, the team that now has a second legitimate scoring threat to compliment Iverson. Iverson will have a huge game, as usual, but his scoring presence will be countered by Stackhouse. The determining factors in this game will be between Hill and Kukoc and who establishes himself first and has the bigger game.

Justin's pick: Sixers by eight

These are two teams jostling for playoff positions, and also two teams that have had hard physical battles between them the past year. There will be a very interesting battle between Jerry Stackhouse and Allen Iverson at the two guard. Both players will expend a lot of energy guarding each other, so look for others to step up their scoring. George Lynch will be key for the Sixers as he guards Grant Hill. Lynch is a very underrated defender, but stopping Grant hill is as hard a job as any. The key might be which front court plays better than the other since both are considered weak and need to prove themselves; it is time for Gieger and Vaught to start putting up the numbers that they were given big contracts for.

Ali's pick: Pistons by two

LA Lakers at San Antonio

The outcome of this game will rest on the status of Shaq. He is currently listed as day to day with a sprained ankle; however, considering the Lakers have already secured home court advantage throughout the playoffs it would be foolish to risk reinjury and the possible loss of Shaq for any duration of the playoffs. San Antonio leads the season series 2-1, and will likely win this matchup with the big man's absence. These two foes played recently (April 8), and surprisingly Shaq's presence was not missed under the glass, as both ended up splitting 100 boards equally between them. However, his dominacne on the offensive end was sorely missed, as his starting replacement, John Salley, was stymied by Duncan and Robinson and held to the big 0 in scoring. Without Shaq, Duncan should have another field day like he did just about a week ago (26 pts., 16 reb., 4 blks). However, should Shaq decide to play in the season finale, then we will see a very different outcome.

Justin's pick: San Antonio by 12

The Spurs just beat the Lakers without Shaq and will have to play even better to win this rematch. They have the best chance of beating the Lakers in the playoffs among any team in the league. Having two dominant big men like the Spurs do is almost unfair — especially considering what they can do defensively. The Spurs, however, need to compliment the big men with good shooting from the outside. On the other hand, Kobe Bryant will be key in talking pressure of Shaq and creating with his team through his penetration. He might not be able to finish regularly in the paint with Robinson and Duncan but should be able to create for his teammates. The most important match up mirth be Sean Elliot versus Glen Rice.

Ali's pick: Spurs by four

What a difference a day makes

Philly takes first in East, bumps New Jersey to fourth in final game of season

By Kevin Logan

One game. Three periods. 60 minutes. That's all that would make the difference between first place, with guaranteed home ice advantage throughout the playoffs, and a mediocre fourth-place spot.

It came down to the last game of the regular season for the Philadelphia Flyers. A win or tie (or overtime loss, for that matter—just a point) would mean first place in the East, a spot that had been occupied by the New Jersey Devils for practically the entire 84 games of the regular season. A loss would concede the Eastern Conference title to the Devils and leave the Eric Lindros-less Flyers back in a disappointing fourth. There was no in-between; no second, no third places.

That being said, the Flyers had more than enough motivation to beat the already eliminated Rangers, which they did by a margin of 4-1. They did not find much of a challenge from the Rangers, as the game was as meaningless for them as finding a penny tails-down in the parking lot outside Madison Square Garden. And so Philadelphia watched with pure delight as the Devils were knocked off their pedestal and suddenly brought right back down amongst the rest of the pack.

The 4-1 victory means the Flyers will face the eighth-place Buffalo Sabres, starting Thursday night. Philly has won three of the four head-to-head matches, but the last meeting between the two was way back in December, and Buffalo came out on top. Furthermore, with Lindros out and facing a hot goaltender in Dominik Hasek, the Flyers may not have it as easy as they expect.

Rounding out the East:

WASHINGTON (2) vs. PITTSBURGH (7): The red-hot Caps came out of near oblivion the second half of the season and nearly took first place for themselves, but the Pens have some momentum as well after clinching themselves a playoff spot and winning eight of their last 11. Pittsburgh has also won the season series, 3-1, and owns this season's Art Ross Trophy winner in Jaromir Jagr.

TORONTO (3) vs. OTTAWA (6): Despite the fact that the Leafs are a better team in the books and also had a chance to nab first place in the East, the Senators have won four of the five matchups this season. However, Toronto has the advantage between the pipes with Curtis Joesph, who could very well help carry the team to the second round and beyond. In terms of goaltending for Ottawa, a key factor will be how Tom Barrasso adjusts to his new home after being traded late in the season.

NEW JERSEY (4) vs. FLORIDA (5): The Devils have a lingering, haunting past to escape after being eliminated in the first round the past two seasons, the second round the season before and not even making the playoffs in '96—all after winning the Cup in '95.

In terms of the present, New Jersey has won three of four games against the Panthers, including its final game of the season on Saturday.

Look for Claude Lemieux to live up to his reputation as a playoff player, and keep an eye out for recently acquired Alexander Mogilny and rookie Scott Gomez. Florida is led by "Rocket" Richard Trophy winner Pavel Bure, who is sure to give Brodeur a run for his money.

In the West:

ST. LOUIS (1) vs. SAN JOSE (8): The Presidents' Trophy-winning Blues shouldn't have much trouble making it to the second round; they went undefeated in five against the Sharks (one tie) this season, and have an all-time series record of 26-7-2. The only major problem the Blues face is that they will be forced to play without Pavel Demitra who is out with a concussion. Look for veteran Pierre Turgeon to lead the Blues to a possible Stanley Cup.

Stewart/AP

Mark Recchi and the Flyers knocked New Jersey off its pedestal in the East.

DALLAS (2) vs. EDMONTON (7): This one's all Dallas. During the season, the Stars took three of the four decisions (and tied the other), and their all-time record against the Oilers is 22-3-3. With a team primarily the same as the one that won the Cup last season, the Stars swept the Oilers in the '99 conference quarterfinals and only needed five games in the semifinals the year before. Dallas is led by a barrage of stars, including Brett Hull, who just upped his standing to the ninth-highest goal scorer of all-time.

COLORADO (3) vs. PHOENIX (6): No upset expected here either. While the season series was split, the Avs have been on a roll (9-2-1) since acquiring Ray Borque. In addition to Bourque, the Avs are led by Joe Sakic, but the loss of Peter Forsberg could hurt them. With All-Star Patrick Roy in net, Colorado also has the goaltending advantage over the Coyotes' Sean Burke. Phoenix's Roenick and Tkachuk will have to step up play to get the Coyotes a second round berth.

DETROIT (4) vs. L.A. (5): Detroit is heavily favored in this one, led by arguably the greatest coach of all-time in Scotty Bowman. However, the Kings have a strong team with Palffy, Robitaille and Rob Blake, among others, and the season series was split 2-2-1. The Wings obviously have a solid all-star lineup in Yzerman, Murphy, Fedorov and Shanahan. Their depth could prove too much for L.A. Also, L.A.'s goalies don't have much playoff experience, which gives Detroit a huge advantage, backed by Chris Osgood.

Sports

McKnight and D'agostino: fixtures of Bucknell water polo

By Allison Kuhn

It was only one year ago when women's water polo became a varsity sport at Bucknell. However, the team has produced two sensational athletes as well as leaders in Emily McKnight and Kristin D'agostino, the team's co-captains and only seniors. The duo began playing their freshman year when the team was still at the club level.

"(McKnight) has made a lot of sacrifices for the sport as well as the team, and I think that her drive and perseverance will carry over into the other endeavors in her life,"
—Kelly Wilson '00

McKnight is from Slippery Rock, Pa., where she was a swimmer for 12 years. When Emily came to Bucknell, she decided to play water polo. Even at the club level Emily took the sport very seriously and played with all her heart.

"Emily is a great leader who befriends every member of the team. She is the kind of person that everyone knows they can go to for support," teammate Julie McLaughlin '01 said.

McKnight's dedication to water polo through two years of club play and one at the varsity level has led her to her current position as team co-captain.

"Emily is very passionate about water polo. She has made a lot of sacrifices for the sport as well as the team, and I think that her drive and perseverance will carry over into the other endeavors in her life," said Kelly Wilson, captain of the women's swimming and diving team.

Paige Cull—The Bucknellian

Senior water polo captains Kristin D'agostino and Emily McKnight (left to right) have excelled both in the classroom and in the pool.

Emily is an elementary education major. This past semester she was a student teacher for second graders at Milton Elementary School. "Student teaching was one of the best experiences of my life, it made me realize that teaching is exactly what I want to do," McKnight said.

McKnight, who is also an avid skier, is planning to move to Colorado after graduation to teach.

D'agostino came to Bucknell from Harrisburg, Pa., where she was a member of the Cumberland Valley water polo team for four years.

"Kristin is a hard worker and a very determined person. She has been an asset to the team, and I don't know what we would have done without her."
—Alison Hernandez '01

She has been Bucknell's starting goalie for four years and has taken water polo seriously from the start. "Kristin amazes us with her ability to balance a high standard of academics with an intense water polo schedule," McLaughlin said.

She is a chemical engineer at Bucknell and will be living and working in Allentown next year.

"Kristin is a hard worker and a very determined person. She has been an asset to the team, and I don't know what we would have done without her," teammate Allison Hernandez '01 said.

Both McKnight and D'Agostino have enjoyed extremely successful careers at Bucknell in and out of the pool. Their contributions to the team will be remembered for years to come.

Bison hope to find consistency for Patriots

from page 14

skill-wise," Gill said. "They just seem to capitalize on our errors and get a bunch of hits in one inning, and then we can't get it back."

This was also true in Saturday's doubleheader against Colgate. The Bison fell behind early in the first game, allowing Colgate three runs in the first inning.

Although the Bison pulled ahead 4-1 in the fourth, Colgate plated three more in the fifth and came out with a 7-4 victory.

Demetriades and Gill stood out once again for BU, with Demetriades racking up her third triple of the year and Gill going 2-3 at the plate with a double. Junior Charity Ford also had a double, going 1-2.

In the second game, Colgate kept BU scoreless until the bottom of the fourth, when the Bison plated one to bring the score to 5-1. Three runs for Colgate in the top of the seventh clinched the win, and BU fell 8-3.

Despite solid hitting, bad luck seemed to keep the Orange and Blue from scoring the runs they needed against Colgate. "I can't even tell you how many blooper hits they had," Grieb said. "And then we'd fire one and it'd get caught."

Gill's double and a 2-4 performance at the plate led the Bison, and Ford batted a solid 2-4, including a triple.

Zergebel kept alive her hit streak, now at twelve straight games, going 1-2 in the first game against Colgate and 1-3 in the second.

Demetriades admits that this season has been frustrating so far for the Bison.

"We are not clicking well as a team, and we are not communicating on the field-infield or outfield," Demetriades said. "Hopefully when we get to Patriots we can pull it together, start communicating and play better defense as a result of more talking on the field."

Stephanie Metz—The Bucknellian

Jenna Demetriades '02 digs in at the plate for the Bison against Colgate.

With last Tuesday's game against Seton Hall canceled due to rain, the Bison look to tough games against Army and Holy Cross this weekend.

"We can definitely beat both of these teams," Grieb said. "But we need to step it up. We need to pitch better, and if we can do that then our entire defense will pick up. This weekend we will find out where we stand in the league."

Crew captures two golds

By Jennifer Ciotta

This past Saturday, the men and women's crew traveled to the Cooper River in Camden, NJ, to row against a tough field of competitors in the Knecht Cup where the varsity women swept the field by capturing two golds.

The women's pair of lightweight captains Sarah Diegnan '00 and Keri Heuberger '02 rowed against nationally top-ranked University of Massachusetts. After 500 meters, the Bison women were down by half a boat length to UMass. By the 750 meter mark, Diegnan and Heuberger had gained a full length, and they won with open water between them and UMass in the impressive time of 8:37.07.

"This was the first race this season we had to work to win," Diegnan said. "It was a good experience for upcoming regattas."

The women's four, consisting of openweight captain Annie Calcagni '00, Kelly Wanger '00, Elizabeth Barrows '00, Julie Engel '03 and coxswain Linda Voll '03, raced in a field of 15 experienced crews. The Bison women stroked their way to the gold with open water between themselves and the University of Kansas.

On the men's side, the varsity lightweight eight rowed against four boats ranked in the top 20 nationally and finished in sixth place.

The novice men's B boat rowed its way to an impressive second place finish, losing to Rhode Island by only 0.8 of a second. The novice men's A boat finished fifth overall.

This weekend, the entire men's team and women's pair will train at home for next weekend's Murphy Cup in Philadelphia.

Meanwhile, the women's four will travel on Saturday to Shelton, Ct, to compete against Amherst and Fairfield. On Sunday, they will row in the President's Cup, hosted by Marist in Poughkeepsie, NY.

Bucknell tops Presidents' Cup standings

Current Presidents' Cup Standings

	Institution	Points
1.	Bucknell	59
2.	Colgate	57
3.	Lehigh	51.5
4.	Army	47
5.	Lafayette	42.5
6.	Navy	41
7.	Holy Cross	34

By Carmen Mauriello

Bucknell is on pace to challenge for its third-consecutive Patriot League Presidents' Cup. After the fall and winter sports seasons, the Bison stand in first place with 59 points, while Colgate trails close behind at 57.

The Orange and Blue also control the women's trophy standings, as the indoor track and field team captured the championship, basketball finished fourth and swimming and diving ended in fourth place.

Colgate led the Presidents' Cup race after the fall season, but only tallied 22 points in the winter athletic campaign. The Red Raiders earned third place points in track and field and finished in third and fourth place in men's and women's basketball respectively.

Lehigh is in third place with 51.5 points, after capturing the women's swimming championship and three top-four finishes in winter sports. The Mountain Hawks hold a one-point lead over Colgate in the men's trophy race.

The United States Military Academy is in fourth place with 47 points, despite only competing in 11 of the league's 13 events in the fall and winter campaigns. Army, the only other institution besides Bucknell to ever capture the Presidents' Cup, won titles in men's swimming and diving and men's track and field.

Lafayette fell into fifth place after the winter season with 42 points, after only winning the men's basketball championship.

The United States Naval Academy climbed into sixth place with 41 points, despite only competing in eight of the league's 13 sports. Navy boasted runner-up finishes in women's swimming and diving, women's track and field and men's basketball.

Holy Cross fell to last place with 34 points, despite winning the women's basketball championship.

The results of the spring sport season will determine the final Cup standings; Bucknell figures to battle for the title with competitive teams in all of the league's spring sports.

A different world

Commentary

Senior Editor
Chris Ellis

To say that Major League Baseball in Montreal is an anomaly is an understatement.

Believe it or not: the Montreal Expos may be one of the more talented teams in the National League. They have arguably the best young outfield in Major League Baseball. They have a solid starting rotation, a proven closer and a bullpen that is both deep and talented. Their farm system—perhaps more than any other team—is loaded.

But if a good baseball team exists, and no one is able to hear it, does it make a sound?

It seems that every aspect of the Montreal franchise is paradoxical when compared to the rest of Major League Baseball. In an era when the best teams are bought, not made, and contenders are stocked with free agents that are developed elsewhere, the Montreal Expos are a solid baseball team—one capable of contending in the top-heavy National League Central—that is composed almost entirely of players that are homegrown.

But in an era where television and radio broadcasts increasingly supply a large percentage of a team's publicity-and, as importantly, its revenue— Montreal is at a disadvantage. A huge disadvantage.

Because Major League Baseball teams are allowed to keep the revenue they earn from local television and radio broadcast rights, revenue streams in baseball have, more than any other pro sport, been disturbingly unequal for some time. But in the case of Montreal, the difference is simply astounding.

The situation that currently exists in Montreal isn't at all similar to those in Pittsburgh or Kansas City or Minnesota, where small-market cities can't get as much money for their rights as the big boys. Even with a long (if not storied) history, even with a young and energizing team, the Montreal Expos can't give their rights away.

Well, not quite. New Expos managing partner Bob Loria refused to flat-out give the rights to broadcast Expos games away. But since no offer to broadcast the Expos was much better than free, the Expos will not be heard on English-language radio and will not be seen at all on television.

In this day and age, Major League Baseball games won't be heard on radio or TV? Is such a thing possible?

Obstacles such as these are a fact of life for Loria, a U.S. businessman who recently purchased a majority stake in the Expos and seems committed to saving baseball in Canada. A little perspective: this season, New York Yankees owner George Steinbrenner will pocket close to $60 million in local television and radio revenue. The best offer that Loria got to broadcast the Expos on both television and radio amounted to $800,000 Canadian dollars, plus expenses.

Loria was rightfully insulted by that offer so he refused it. As a result, Montreal baseball will be broadcast locally on just French radio station, and even that station will opt not to broadcast some games. The Expos' total windfall for the French rights?: $100,000 Canadian dollars. At current exchange rates, that amounts to under $70,000 in U.S. funds. Steinbrenner can pay Derek Jeter, David Cone, Orlando Hernandez, Tino Martinez, Scott Brosius and Chuck Knoblauch with the revenue from the New York broadcast rights. Loria can pay a couple of front-office interns.

If very few will have access to the Expos away from the stadium, even fewer will be able to see the team at Olympic Stadium. An old, outdated (and arguably dangerous) facility, fans have stayed away from Montreal baseball in droves. The Expos became the first Major League team in almost a decade to draw less than 10,000 fans per game, and season ticket sales from the 2000 season—while up from last year—still number under 3,000.

It's a shame, too. For all the troubles caused by the lack of interest in baseball in Montreal and the Canadian currency and the French language, the Expos have always been one of the best pure baseball organizations in the game. The team historically has a strong farm system—no less than ten former all-stars were developed in the Expos organization—and Felipe Alou is quite possibly the best dollar-for-dollar big-league manager around.

But for all its off-season success, the Expos have been plagued by the problems of its market. The pattern is cyclical—talent is developed, stays for a year or two, and leaves. It's only fitting that the two best years in Expos history were two of baseball's worst. Montreal's only playoff year, 1981, was the year of baseball's first major labor dispute.

In 1994, the Expos—with a power-packed lineup that included, among others, Moises Alou, Larry Walker, John Wetteland, Marquis Grissom and Pedro Martinez—had the best record in baseball. That is, until a lockout ended the rest of the regular season and the playoffs. Unable to meet the salary demands of virtually all of its top players, Montreal broke up the team shortly thereafter and has been mired in or near the NL basement ever since.

The cycle of talent, however, is on the upswing. Vladimir Guerrero may be the best all-around player in the National League, including Ken Griffey, Jr. His outfield mates, Rondell White and rookie Peter Bergeron, also have tremendous potential. Dustin Hermanson and Javier Vazquez anchor a young and promising rotation and Ugeth Urbina saved 41 games last season for a team that won only 68.

The Expos may not have the talent or veteran leadership of the Braves or Mets but, if they can get their young players to develop, may be able to push them this year, and perhaps catch them the next. But after that? Will free agency massacre Montreal again?

For better or worse, things are about to change in Montreal. Loria understands that his chances of keeping a competitive team—or making a profit—are nil if he continues to attract few fans to Olympic Stadium and can't get a broadcast contract. Baseball in Montreal is dependent on the building of a new, publicly-financed ballpark, and it is unclear whether the Quebec government has the resources or the desire to build the park. The Expos were destined to leave Montreal—perhaps as early as this season-until Loria stepped in and injected some badly—needed capital to keep the team afloat.

But Loria didn't buy the Expos for his health, and if he can't get a new ballpark, then the Expos will have reached the end of their road. Loria has been committed to Montreal, but also has business ties in baseball-starved Northern Virginia, a region that almost certainly would build him the ballpark of his liking at his price.

The long-term future of the Expos will be determined in coming months, and the viability of the franchise will depend on everything from exchange rates to the Canadian government. But for now, Montreal can be simply a good baseball franchise again. One of the youngest and most talented the game. One that could surprise just about everyone in the NL East. One that is certainly worth following.

Just make sure that you have a newspaper.

Bison hurdle foes at Invitational

By Justin White

The Bison track and field teams cruised to victory this past weekend at the Bucknell Outdoor Invitational held at Christy Mathewson Memorial Stadium. Both the women's and men's teams dominated in almost time-trial fashion.

The meet featured three other teams: C.W. Post, Towson and Western Maryland. But none of them were able to compete with the talent and depth of the Bison. A fifth team, SUNY-Cortland, was supposed to participate but was a no-show due to the bad weather. Cortland was expected to provide some marginal competition for the women distance runners.

As it turned out, the teams lucked out with the weather despite the ominous forecast. Rain didn't begin to fall until the last few events were being run. Only the triple jump and 4x400m relay were cancelled as a result. However, the dropping temperature and deteriorating weather adversely affected some performances and hindered some times. The meet began at a sunny, clear 75 F but ended a rainy, windy 47 F.

The men won the meet with 122 points; their nearest competitor, Towson, tallied only 34. The men's team swept 12 out of the 18 events. In addition to these victories, Bucknell consistently placed three or more athletes in the top five.

A remarkable example was the 800m run, where the Bison had nine out of the top 10 finishers, led by Ron Hess '00, who won in 1:53.71.

"(The meet) was exactly what it was supposed to be," head coach Art Gulden said. "It allowed us to rest people."

Other winners on the men's side included a trio of freshmen.

Owen Bartels launched a 44.42m throw to win the hammer throw, Bill Bartsch won the 1500m run in 4:03.83 and Rich Alexander narrowly won the 110m high hurdles in 16.10.

Senior co-captain Dave Pomfret was the only double winner for the men; he took the pole vault with a leap of 15'6" and the javelin with a toss of 190'4." Pomfret is coming off an injury and has set his sights upon qualifying for the NCAA Championships in both the pole vault and javelin.

The women were not to be outdone by the men. They captured 13 out of the 18 events en route to accumulating 131 points, 84 points more than second place Towson.

The biggest surprise of the day came in the 400m hurdles, where freshman Edwina Bourn broke the school record, clocking in at 1:02.81.

Bourn was astonished that she accomplished such a lofty goal so soon in her Bucknell track career. "I wasn't expecting to run anywhere near that time," Bourn said. She has now qualified for junior nationals and figures to be an integral part of the team come the Patriot League Championships.

The women had no shortage of contributors in their victory. Shannon Maher '02 won the high jump by clearing 5'4," giving her the fourth best all-time mark at Bucknell.

Sara Vargo '00 took the 100m hurdles in a time of 16.01, while tri-captain Audrey Myers '00 won the discus with her toss of 129'1".

Both teams are now preparing to enter a crucial stretch in their outdoor seasons. They have the Bucknell "5-Way" this Saturday, April 15, and are only four weeks down the road (the conference championships).

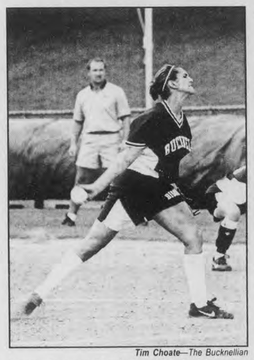
Lock Haven, Canisius, East Stroudsburg, Juniata and Susquehanna are the other teams competing at the "5-Way." Although Gulden doesn't believe that any of these teams should out-perform his squads, they should be able to provide solid overall competition for the Bison.

Tim Choate—The Bucknellian

The Bison hope to carry over their success from last weekend's Bucknell Outdoor Invitational to this weekend's "5-Way" competition, which the Bison will host at Christy Mathewson- Memorial Stadium.

Softball not playing up to potential

By Brooke Rea



Tim Choate—The Bucknellian

Lauren Potente '02 winds up for the Bison.

Still looking to reduce mistakes on the field and find consistency in their play, the Bucknell women's softball team faced competitors Towson and Colgate and went 0-4 in doubleheaders last Wednesday and Saturday.

Errors plagued BU in both match-ups against Towson, permitting the Tigers to have big-scoring innings in both games, which ended up clinching the wins.Head coach Terrie Grieb admits that the team is not showing its true capabilities. "We did not play as well as we need to play," she said. "We are not executing the basic plays, and even though we can do them in practice and sometimes in games, we need to be able to do them all the time."

Towson came out strong in the first game, sneaking to a 5-1 lead by the bottom of the fifth inning. The Bison came back with two runs of their own in the sixth, but a five-run seventh inning was all Towson needed to seal the victory.

BU's power at the plate was clear in its last at-bat, when it plated three runs, including a home run from sophomore Jenna Demetriades. Despite this final effort, Towson took the opener with a 10-6 victory.

"If there is one thing we are doing, it's hitting the ball well," Grieb said. "We are hitting the line shots and they are getting caught. But in the field we are not getting the outs when we need them."

In the second game, the Tigers once again had a big-scoring inning to put them in the lead early. A six-run second inning put BU behind 6-1, and despite three runs by the Bison in the bottom of the third, Towson came back with four in the fourth to take the 11-6 victory.

Standouts for the Bison included Demetriades, who scored twice and went 2-3 at the plate. Meredith Gill '03 went 2-4 and scored one run, and Lauren Titus '02 also scored one and went 1-3 at bat.

Gill, a shortstop who was named Subway's April Athlete of the Month for softball, agreed with Grieb's assessment of the team's inconsistent playing.

"I don't think that any of the teams we've played have really been better than us

Golf tunes up for Patriots at Navy Invitational

Team set to host '00 Patriot League championships this Friday through Sunday

By Sean Houston

The same out-of-season weather that forced the cancellation of many baseball games this past weekend claimed yet another victim on Sunday. The second round of the Navy Spring Invitational at Osterville, MD was snowed out, forcing the men's varsity golf team to depart with a 16th place showing (out of 19 teams) after only one day of play.

The team was unable to get in all the match-play practice it wanted, and its final score of 322 was 23 strokes behind first place Princeton and 20 strokes behind Patriot League rival Navy. Still, the Bison have reasons for optimism heading into hosting this weekend's Patriot League Championships.

The team as a whole performed better than Patriot League rival Lehigh, who was in last place at the end of day one.

In addition, there were impressive individual rounds turned in by sophomore Nick Leibowitz, whose one-day total of 76 (four over par) was tied for 12th, and by junior Dave Horton, who finished two strokes back of Leibowitz. Captain Ken Kosteva '01 had an off day, shooting an 83, and freshman Jimmy Freeman rounded out the scoring with an 85. Uncounted in the 5 play 4 count format of the tournament was freshman Nick Perini who finished the day with an 88.

"There weren't very many strokes separating us from the middle of the pack. If we had caught any breaks we would be right there with everyone else," head coach Tommy Thompson said.

He thought his squad matched up well with other Patriot League schools. "Our team has less experience in Patriot League Championship play than the other schools. But all we need is for four of our guys to step up and turn in consistent rounds. With the exception of Navy, we've done well against other Patriot League schools."

The Bison will host This week's Patriot League Championships will be hosted on campus at the Bucknell Golf Club. The tournament will start Friday and conclude Sunday the. It will be governed by a 6 play-4 count format and will span 54 holes. The winner of the tournament receives an automatic NCAA regional tournament bid.

Indigo Girls rock Fieldhouse, students

By Stephanie Nickse

Tim Choate—The Bucknellian

The Indigo Girls make their third appearance at the University last Saturday. The band played to a mixed crowd of students and visitors who enjoyed a two hour performance. The group made a grand entrance as they walked from the second level of the Fieldhouse, through the crowd and onto the stage.

The Indigo Girls were greeted by hundreds of fans, both University students and those who traveled large distances through the April sleet and snow, this past Saturday night in the Field house.

The evening began with the music of the talented opening act, Danielle Howle. Later, to the thrill of students and adults alike, the Indigo Girls, Emily Saliers and Amy Ray, strolled onto the stage for their performance.

As the music got started, it was clear that there was a great diversity among the fans. Although there were many Bucknell students at the performance, a larger number of listeners came from neighboring schools and there was the surprising appearance of an older generation.

Regardless of age, all listeners seemed to thoroughly be enjoying themselves by the end of the evening.

The Indigo Girls were very supportive of Howle's music. They even gave her background support during her version of "Blister in the Sun."

Although she was a hit, the fans were thrilled when Emily and Amy came on stage to perform.

They played a variety of their music, both old and new. Even the adults in the crowd were into singing along to songs like "Galileo," "Closer to Fine," and "Romeo and Juliet."

Other songs performed included "Thin Line," "Wood Song," "Gone Again," "Soon Be to Nothing," "Jonas and Ezekial," "Get Out the Map," "Feye Tucker," "Hammer and a Nail," "Here I Am," "Shame on You," "Ghost," "Ozilline" and "Cold Beer and Remote Control."

The Indigo Girls came together in high school, calling themselves "Saliers & Ray" and "The B-Band." Their music started with the rehearsal for a school talent show.

Then, in 1985, Amy came up with the idea to call themselves the Indigo Girls. She had found the word "indigo" in the dictionary and decided it was "cool."

The girls performed both solo and together beginning with their fist full-length album, *Strange Fire*. Later, the girls produced *Nomads Indians Saints*, *Back on the Bus*, *Y'all*, *Rites of Passage*, *Swamp Ophelia*, *1200 Curfews*, and *Shaming the Sun*. Their most recently released album, *Come On Now Social* is another great hit.

The duo are invariably associated with acoustic guitars, heavenly harmonies and an activist streak. As well as supporting gay and lesbian rights, gun control and environment protection, Ray and Saliers are strong advocates of personal growth and sincerity.

I especially found these aspects true of the girls that appeared Saturday night. As a more recent fan of the Indigo Girls, I am only familiar with their music and not their personal political beliefs. However, upon entrance to the Field house, pamphlets and pins were laid out on a table advocating gun control.

The girls really impress me as kind hearted, fun, people and they seem strongly opposed to violence and the destruction of the earth.

Even their appearances seemed natural with simple clothing and little makeup. It was nice to see female musicians who appear only to attract fans to their musical talents instead of appearance.

An exciting time was had by all at the concert and the Indigo Girls seemed to really enjoy the enthusiastic and diverse crowd. Concert-goers had the opportunity to pick up their latest CD, and copies are also still available in the book store.

Miller, MG101 foster imagination

By Jim Leahy

"Dude...it's priceless" t-shirts, pint glasses, and fleece blankets are all products of Management 101 companies that traditionally appear during the last third of every semester. Both the products and the course enjoy considerable popularity, but what seems to be more of a topic is the man behind the entire enterprise, Professor John Miller.

Arriving at the University in 1978, Miller has made many contributions to the management department over the years. However, his most visible additions to the department are the 101 course and his planning of the rest of the management curriculum around it.

The University, up until the early '70s, had a separate School of Business. When the school "was put to sleep," the program led to a management department that taught programs in accounting and administration.

The curriculum was weak, and its reputation was not very good. After some time, the University contacted Professor Miller at Yale, where he was chair of the management department as well as director of admissions and student affairs for Yale's School of Organization and Management.

After some time and a few meetings, Miller accepted the job with a mandate from the University president and dean of the college of Arts and Sciences. His mission: "Turn the curriculum of the program on its head."

To do this, Miller began a new course, Management 101, with a very specific goal in mind. He wanted to move the comprehensive capstone experience from the final year to the beginning of the student's management classes. Doing so would enable students to use the broad-ranging course as a foundation on which to build everything they learned as the courses became more advanced. Management 101 would "not be about selling t-shirts," as Miller reiterates constantly.

Over the past 21 years of the course's existence, Miller has seen the its popularity rise dramatically. He credits the increase to some good things, and some bad.

On one hand, students now see the course as a way to put credentials on their resume so as to get good jobs out of college. Miller worries that this "valid interest" is being used for the wrong reason.

On the other hand, he feels that students want to work in groups, that the program gives a certain validity and realness to work after school and that the program teaches students many things about themselves.

Miller explains, "The students live with the consequences of their own decisions and actions."

His course has also taught him many things as it evolved into its present form. Instead of learning from the book, students go out and get the experience of being in business before they have to apply it to things that textbooks explain.

Also, Miller has learned that even though disciplines that the course deals with teach similar ideas, they are taught in different languages that impede the learning process.

According to Miller, the leveling of the language barrier, known as "Rectification of Names," a term used in ancient Chinese Philosophy, is one thing that has evolved, even though

Genetic patenting comes under fire

Ethics of human genome research finds both support and opposition

By Brian Watson

Following major breakthroughs in genetic science, a new controversy has emerged—Who should have the legal rights to patent genetic information? Better yet, can it even be patented?

Apparently so, if you ask genetic research companies—corporations that have recently flooded the US Patent Office with over 10,000 applications for rights to mapping genetic codes.

In a joint statement, President Bill Clinton and British Prime Minister Tony Blair declared: "To realize the full promise of this research, raw fundamental data on the human genome, including the human DNA sequence and its variations, should be made freely available to scientists everywhere. Unencumbered access to this information will promote discoveries that will reduce the burden of disease, improve health around the world, and enhance the quality of life for all humankind."

Is the fight for genetic patents a life-or-death situation? Possibly, but there's no way to know yet. Many experts believe that these research projects may hold the key to finding cures to countless degenerative diseases and disorders.

This monumental investigation—identifying the sequence of the three billion DNA units that comprise the human genome—has been in progress for years and may very well result in advances that surpass any scientific discovery in history.

Still, skeptics contend that the countless costs and hours of effort are not worth the possible results. Some experts concur, but others vehemently support the ongoing experimentation.

But with support for private projects comes the question, "Should people have to pay to gain access?"

John Sulston, Director of the Sanger Centre at the Wellcome Trust Genome Campus of Cambridge, believes that the rights should be available to all without a price tag. "First and foremost," he wrote in *New Scientist* Magazine, "(the human genome) is intrinsically a part of every human being, a common heritage in which we should all share equally,"

Clinton said, "I think in the biotech area, our position ought to be clear. General information ought to be in the public domain as much as possible about the sequencing of the human genome. And where public money contributed to massive research on the basic information, we ought to get it out there."

Q. Todd Dickinson, Commissioner of the US Patent and Trademark Office (PTO), assured that the president's statements would not change current standards, reaffirming that genetic inventions could be patented so long as they meet current "statutory criteria of utility, novelty and non-obviousness."

Critics worry that patenting such information gives corporations the legal right to rip off customers and other scientific institutions seeking to use the new data. Case in point: The Miami Children's Hospital currently owns the patent on the Canavan gene, the cause of a major degenerative neurological disorder. The hospital developed a test for the disease, and charges a $12.50 royalty on anyone who uses the evaluation.

Many pharmaceutical companies want in, looking to cash in on the costly research. Others worry that their research may go down the drain if other companies are allowed to copy their results without having to pay royalties.

Research on the human genome is expected to spark a revolutionary period in medicine; diseases that have eluded scientists will now be analyzed through the genes that cause them.

The ethical arguments will certainly continue until more major breakthroughs are publicized, but the legality conflict may end up dragging scientists away from their work. The question of life-and-death cannot be answered in a courtroom, but, in this case, might be decided in a laboratory.

US Patent office looks to genes as the next wave of patentable items.

FEATURES

Susman inspires students through his teaching, writing and travels

By Katie Hays

In a single sitting with a student, he can launch into a discussion of Cuban health care policy, wonder at the varying approaches to dengue fever among South American countries, and spontaneously remark on a child's crayon rendering of "Guys and Dolls" that is tacked to his office wall. Indeed, regardless of the topic, Professor Paul Susman speaks energetically.

Susman lectures, travels, and engages his students in discussion. An associate professor of the geography department at the University since 1980 and currently the geography department chair, Paul Susman is—to put it plainly—an extraordinary man. It is his enthusiasm that draws people to him.

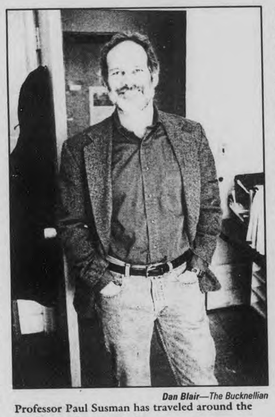
Susman grew up in both New York City and Great Neck, New York. A "history buff," Susman majored in history at Oberlin College, and then as a free-spirited and motivated young graduate, he took a job in film production. As an assistant cameraman for Latin American feature films—mainly political features and documentaries—he traveled between Argentina and New York

Filmmaking, however, did not consume Susman. He recalled, "After working on films for about a year, one of my friends raved about the great geography department at his college. He persuaded me that studying geography in graduate school might be a good way to combine my interests, and he was definitely right."

Inspired by his friend's advice, Susman enrolled in graduate school at Boston University, studied geography and found his "niche."

"I like to contemplate where things are going in political economies—the dynamics—and to research the well-being of people in different places."

Susman most definitely does what he "likes;" after earning his MA at Boston University and his Ph.D. at Clark University, he accepted a position as a professor at the University. Besides teaching, writing and doing fieldwork, he enjoys spending time with his children, Rebecca, 18, and Sasha, 11.



Dan Blair—The Bucknellian

Professor Paul Susman has traveled around the world studying geography

Last Friday, Susman returned from the annual Association of American Geographers' Conference, where he lectured on the topic of Cuban health care, presenting a talk entitled, "Health and Hazards: Lessons from Cuba?"

"I was searching for answers to questions of equality among the people in Cuba," he explained. "Comparing epidemiology, health care and policy issues in Cuba, Puerto Rico and the Dominican Republic helps to bring tentative answers."

Energetic, articulate and introspective, Susman converses easily and listens patiently. Sitting in his comfortable office, students naturally fall into conversation.

When asked about his fieldwork, Susman said, "I travel alone or as a part of a team; we go out and collect information, go to government offices and find statistics or conduct original surveys of issues concerning population, income or energy use."

To date, Susman has conducted fieldwork in Cuba, Grenada, Zambia, Nicaragua, Mexico, Puerto Rico, New England and England. At his field work sites, he studies people and their environment, namely economic regulative planning, issues of Third World development and environmental planning. His publications on such topics are numerous.

In reference to his professions of teaching, writing and traveling, Susman smiles, "It's terrific." Upon returning his smile and contemplating the depth of his personality, students realize that Susman himself is terrific.

When urged to name what he likes most about the University, Susman professes simply, "The students are great. I've watched the quality of Bucknell students climb over the years; students here have such a high curiosity and their awareness of the world's complexity amazes me. It's wonderful."

One sees that Susman, too, possesses such qualities. His curiosity and "awareness of the world's complexity" has earned him a place not only as a respected member of his field, but as an admired and motivational professor.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

I am sure you have seen the type of movie where a group of college kids rent a house together for the summer and work jobs in order to pay for their rent. Although this may seem like some kind of dysfunctional Real World, it is a plan that my friends and I have been considering for a long time.

I have always thought it would be a blast to live with my friends for a summer and do nothing but surf, lie on the beach and do a little bit of occasional work to pay for some of the bills. As a result of this feeling, a few months ago, four of my friends and I started looking at homes on Cape Cod that we could rent, as well as possible jobs at lobster shacks or at one of the many miniature golf courses.

This seemed like an awesome idea at first, and while I still would love to partake in it, I simply don't have the financial resources that would enable me to do so. However, while I feel as though I could probably get my parents to lend me some money or could work an extra job, I do have another concern that I have not expressed to my friends.

You see, while my other friends live relatively close to where we would be staying, I live much farther away. The truth of the matter is that my family owns a ranch, not your typical Cape Cod lifestyle to say the least. So while I think I would have a good time, I really can't picture not seeing my parents and not being home for such a long amount of time.

Is there any easy way to cope with being away from home for a long amount of time? Additionally, how could I ask my parents for money and then abandon them for the summer and deny them quality time with me? Essentially, how do I make my final decision and what should I base it on?

Sincerely,
Contemplating Cape Cod

Dear Contemplating Cape Cod,

I definitely agree that a summer on the beach with a bunch of friends would be a great time. However, while it may seem perfect on the surface, when you look a little deeper it definitely has flaws.

The first issue you may want to consider is that you are planning a summer in Cape Cod, not Hawaii-I really don't think it will be all fun and games. The second issue that you may want to consider is that working at a miniature golf course or a lobster shack may not pay the rent.

In addition to these problems, you seem confused about separating from your parents for the summer and seem to feel guilty asking for money. I can understand that you might miss your home and family and, while your summer plans may seem like a great idea, I think you should consider it from your parent's point of view. I am sure that they will miss you and you should take that under consideration. I don't think that asking them for money is the best thing either. After all, you are going to just take it and run.

Since whether you are allowed to leave for the summer is up to your parents, you should probably sit and have a talk with them. Let them address whatever concerns they may have, as well as any monetary issues that need to be dealt with. This is also an opportunity for you to express your feelings regarding your summer without them. Who knows, maybe they will see this as an opportunity for you to grow up a little.

Overall, I think that you need to spend some more time thinking about the positive and negative aspects of your summer and how they may affect both your lifestyle and your family. You may also want to consider how a prolonged amount of time with your friends will affect your relationship with one another. The summer is a time away from school, it is also a break from friends.

While there are several factors that you need to think about, the overall decision is ultimately yours. Evaluate, contemplate and regulate. Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. Questions or comments can be sent to Eli Winkler at box C2815, attn: Wink Thinks.

Please note that Wink Thinks is meant to be instructional as well as entertaining. However, it is in no way a substitute for professional counseling.

MILLER From Page A1

even though the basic structure of the course remains the same.

Storytelling is the most important part of the course (according to Miller). The assignments given during the course of the semester allow students to write their own story of experience that they can review to see how far they have come.

Rebecca Sheinfeld—The Bucknellian

Distinguished management scholar Professor John Miller

Professor Miller grew up in Chicago and, because of his interests in music, desired to be an electrical engineer in order to create "hi-fi" sound systems to aid his music. Accepted to MIT, Cal Tech, and Stanford, Miller chose Stanford in order to "get as far away from home as possible."

He describes the Stanford of the late '50s "as a place much like Bucknell where a person could try out many different things."

And try he did. An engineer for a quarter, Miller was a math major and music major before graduating with a degree in economics and international relations.

Immediately after graduation, Miller went to the USSR during the Thaw period with Khrushchev when the USSR and US exchanged delegations as an attempt to lessen the effects of the Cold War.

However, after an American U-2 spy plane was shot down in May of 1960, Miller found himself dismissed from the USSR and moved to Vienna. He then traveled to Munich where he soon found work and classes at the University of Munich.

From Munich, he moved to France and became one of the pioneers in Europe's best present day business schools, INSEAD (The European Institute for Business Administration).

Following graduation with an MBA, Miller stayed around for three years and taught Human Relations as a graduate assistant.

Ultimately, Miller settled in Pennsylvania where he has lived for over twenty years. During this time, he has received much recognition for his Management 101 course. Besides being taught at over 30 other schools, the course has received recognition in the Journal of Management Education (1991) and earned Miller a fellowship with the Carnegie Teaching Academy (1997). Currently, he is working on a project for the Carnegie Foundation to analyze and summarize his work with the 101 course.

"When you try to do stuff that goes against the grain and [it] works, it is enormously rewarding," Miller commented.

But Professor Miller is not only involved with Management 101. He is a singer with the Susquehanna Valley Chorale, and encourages everyone to come see them on at 8 p.m. May 12 in the Williamsport Community Arts Center.

He also enjoys traveling around to other colleges and universities to teach them something about the management education at the University.

Miller invites all students to attend the Management 101 final presentations on Tuesday, April 18. There will also be a 20th Anniversary dinner on October 26 for the over 5,000 Management 101 alumni. Alumni are encouraged to visit the Management 101 website to give their memories, which will be compiled into a book for the event.

> *"When you try to do stuff that goes against the grain and [it] works, it is enormously rewarding."*

Although many University students see Management 101 as a way to sell T-shirts, they often overlook the stuff behind the class. It is a way to learn group work and how it relates to business and life. And students also overlook the man who started it all, Professor John Miller.

An abroad perspective: New Zealand

Courtesy of Suzanne Bell

Suzanne Bell observes her second and third grade students at work

By Meredith Mickel and Suzanne Bell

As education majors we knew that we would spend part of our senior year doing our student teaching. However, we did not know we would end up doing it in New Zealand.

Many recent practices and theories in education have come from this two-island country, located just east of Australia.

The New Zealand population is comprised of English descendants, the native Maori people and approximately ten times as many sheep!

Although the people of New Zealand speak English, this experience proved to be anything but familiar.

We lived and taught on the east coast of the North Island, just south of the city of Wellington. Meredith did her practice teaching in a new-entrant classroom, the New Zealand equivalent to American kindergartens. New-entrant classrooms consist of five-year-olds, just entering school.

Suzanne did her practice teaching in a class consisting of seven to nine year olds, the equivalent to an American class of second and third graders.

There were many contrasts between the education systems we observed in New Zealand and those we have experienced and studied in America. In New Zealand, there is a strong focus on the integration of different subject areas, a direction in which many American schools are moving.

For example, during one of Suzanne's sole charge weeks she focused all of her lessons around a children's book series, *The Lighthouse Keeper*, written by Ronda Armitage.

There were no text books on which to base spelling, reading and social studies lessons. All had to be created using the different stories of the series.

The job description of a teacher in New Zealand is not as defined as one in America. When needs around the school arise, it is expected that a teacher will take on the extra responsibility. For example, when Meredith's staff was approached needing a basketball coach for the team representing her school, it was expected that someone on the staff would accept this responsibility. Had Meredith not volunteered, someone else on the staff would have had to.

Both of us experienced small details in our day that reminded us we were half-way around the world. These occurrences range from the common bare-footed child walking around our classrooms to the nationwide "morning tea" break taken at 10:30 a.m.

In between teaching on the weekdays and making it home in time for the Christmas holiday we were able to see both the North and South Islands of New Zealand. Staff members, as well as host families and friends, took us to see hot springs, mud pools, glaciers, Mt. Cook (the highest peak in New Zealand) and rugby games (almost a religion in New Zealand).

We took advantage of the opportunities to go white-water rafting, jet boating, tramping (hiking) and Suzanne even bungee-jumped from the highest point in the southern hemisphere!

While traveling, we stayed in youth hostels, affording us the opportunity to meet people from all over the world, including three Bucknellians in Queenstown, New Zealand who had been studying in Australia all semester.

Although we learned from the many sights we saw, the most memorable lessons came from the children. We will be able to employ our knowledge from our experiences in our American classrooms. Our time spent in New Zealand taught us both how much learning will continue in our lives. As no two children are the same, neither are any two days in teaching.

While no teacher ever forgets his or her first class we will never forget the experiences surrounding our Kiwi kids.

Meredith Mickel takes time out from teaching to pose with the students in her new-entrant classroom, which is like a kindergarten.

Leiser House bonds diverse cultures, increases awareness

By Helen Shen

Where can students go on campus to find not only a rich mosaic of cultures but also a group of people enthusiastic about meeting new friends? Where can a Bucknellian go to discover a world that is diverse not only in its people but in its lifestyle as well? The answer to these questions is Leiser House, a coed residence house for upperclassmen at the University. Located on St. George Street, across from Larison Hall, Leiser is in itself a small community with big potential.

Leiser residents characterize themselves as "serious students with mature and tolerant attitudes towards others." Housing 13 residents, Leiser offers a unique environment for students interested in international studies.

Marion Bouju, one of two exchange students from France, boasts of Leiser House as a place where one is "surrounded by people who are interested in cultural awareness." Bouju added that, at Leiser, one can find a special, "smaller community" where the residents have made her feel "very welcomed."

How diverse is Leiser? This year, Leiser houses students from France, Japan, Thailand, Burma, Taiwan, and even Tanzania. "It's great because we can all exchange different kinds of great food!" laughs Sandy Huang, who is the RA at Leiser House.

Bouju agreed, "Here, everyone's always cooking, always talking to each other ... you're never alone." Lara Schutsky, a junior resident at Leiser, said "There's bound to be someone around that you can talk to."

Courtesy of Helen Shen

The University's international students gather outside of Leiser House

All those interested in this type of residence must apply for a room. All applicants must show a significant interest in international studies and those who are accepted usually show a "very strong interest in the house," Huang said.

Leiser successfully combines an open atmosphere with a strong determination to emphasize cultural awareness. "There are a lot of house dinners, and a lot of time for house-bonding," Huang explained.

Bouju, who is already involved in many activities on campus, agreed with Huang's statement that "you get to know what's going on first" at the University.

Leiser sponsors the International Food Night as well as several dances and socials. There are also table discussions about "Where Are You From?" many speakers and films, and even a current world events board—all available to every student on campus.

Even though Leiser stages events with other on-campus groups such as International Spectrum, Cumbre, SAAB, SASA, and Bison Abroad, Huang is still working hard to create a more campus-wide image for Leiser.

"Leiser has such great potential," Huang said. "But we need to do something more on campus. We need to raise our visibility on campus."

Huang's vision is to make Leiser House a place where students can feel free to just stop by and meet people from different cultural backgrounds. Her plan to make Leiser House more "visible" is off to a great start: on Wednesday, April 19th, Leiser House will host a game of Jeopardy in the Bison from 9-10 p.m. This game of "Jeopardy" is unique, because it will focus on international studies.

Leiser House is well on its way to becoming a strong voice on campus. With its welcoming environment and residents who "come from a broad spectrum of backgrounds, lifestyles and cultures," one can find a very positive and colorful community.

University Orchestra performs "Movie Music" in the Weis Center

Paige Cull—The Bucknellian

The Orchestra performed a variety of music from films such as The Raider's of the Lost Arc and the Great Train Robbery on Saturday.

By Jenny Johnosn and Jen Sykora

This weekend the Bucknell University Orchestra performed its first and only concert of the semester.

This semester's concert had a "Movie Music" theme. Under the direction of Christopher Para, asociate professor of music, the orchestra performed excerpts from movies inlcuding *The Raider's of the Lost Ark*, *The Magnificent Seven* and *The Great Train Robbery*.

What made this concert unique from any others was its multi-media effects. As the orchestra performed portions of the movie music a large screen simultaneously displayed clips of the movie.

The orchestra has never performed a concert entirely of movie music, and thus came the idea for the "Famous Film Music" concert.

What made this a fun and exciting concert was not only the fact that the audience recognized a lot of the music, but that they could watch clips from Raiders of the Lost Ark and *The Magnificent Seven* as well as the entire silent film, *The Great Train Robbery*, while the orchestra played along.

This was not an easy task for the instrumentalists, but it was one they took very seriously and played wonderfully!

The concert was a large success, despite the concern that the Indigo Girls's Concert was the same night.

Nevertheless, there was a large audience, and Para did not program an intermission so that people would be able to attend both events.

With this concert, the Orchestra sadly said good-bye to its treasured seniors: Michelle Zeigler, Paul Crowe-Wermund, Jennifer Maab, Darcy Taylor, Ainslie Pearsall, Christin Lundgren, Ryan Darlington and Case Orcutt.

The Magnificent Seven was dedicated to the magnificent seven seniors who will go on to "bigger and better things," but who will be greatly missed.

Student profile: the talented Ann Bonner

By Nicole Gull

As May approaches, many seniors take the time to reflect on the past four years and wonder where the time went. Ann Bonner does just this—with the passing of the weekend came the end of her career as an actor on campus with the female lead in "The Baltimore Waltz."

Bonner first took her passion for theatre seriously as a junior in high school when she began the dreaded "college search."

"At that point in my life, it was the only thing that truly made me happy," Bonner said. "I knew that if I studied theatre in college there would be so much more to learn." With her decision to major in theatre, Bonner also made a decision to wed her studies in theatre with a liberal arts setting.

Though she considered a conservatory education, Ann wanted to continue learning about other subjects in a liberal arts atmosphere, which now she feels has made her very well rounded.

When Bonner entered the University, she immediately began auditioning and soon declared her major.

"In looking back, for some reason, I held back. I wasn't as aggressive as I would have liked to be but I don't regret it now because I am very happy with my theatre experience at Bucknell," Bonner said.

Ann's experience began with "Love for Love," continued with "Classic Clowns & Spring Boards: Harvesting Shakespeare's Hilarity," Merrily We Roll Along," "Tea in a China Cup," "Perfect', and has culminated this week in "The Baltimore Waltz." With this last role, she played a woman whose brother died of AIDS as she vividly recounts her experience through a complex dream sequence.

"The Baltimore Waltz" was the most challenging," Bonner said. "It really worked my knowledge as an actor."

This challenge, though, was overcome with much hard work and the support of the department and all those individuals involved in the production. Bonner has always felt a distinct connection to the Theatre Department and its faculty.

"I love it. The professors have an extreme amount of knowledge to offer to students—like the kinds of things you learn outside of the classroom. No one coddles you—this is so important. You must figure it out on your own and that makes you stronger," Bonner said.

Also a member of The Silhouettes, Bonner considers herself very fortunate to be able to offer these talents to any role.

Though she originally considered herself a singer who could act, Bonner now feels that the roles have slightly reversed. "Since I have been at Bucknell, I've mentally been concentrating on acting. The talent to act is something I feel that you may always have—but the consistency of knowledge behind it is something that may fade if you don't work at it," Bonner said.

As much as Bonner will miss her years here at Bucknell, she cannot help but look to the future. She has applied to some graduate programs to work toward her Master of Fine Arts, and was recently accepted to Brooklyn College. "Theatre is my passion and that is not something I will ever give up on."

Paige Cull—The Bucknellian

Ann Bonner '00 not only spends her time working with the theatre department, but also singing in the female acapella group, The Silouttes.

Upcoming Events on Campus

Now until August 18 : Library exhibits. "Evolving Visions: Three Centuries," an exhibit of changes in campus buildings and spaces from early years to the present, lobby,"Vistas: Timeless Beauty," campus views captured in photographic images, James A. Russell exhibit area, lower level 1.

April 14: Hilltop Film Series. Amateur, directed by Hal Hartley, USA, 1995, 4:30 and 8 p.m., Vaughan Literature Auditorium.

April 14 : Weis Center Series 1. Stuttgart Radio Symphony Orchestra, with Carl St. Clair, conducting, performing, Mahler's Symphony No. 1 in D major, "Titan" and other works, 8 p.m., Weis Center. Tickets: $20.

April 15 : Concert. BucknellUniversity Concert Chorale, William Payne, conductor, 8 p.m., Weis Center.

April 16 : Junior Recital. Alexandria Shammas, soprano; Christopher Halldorson, tenor, 8 p.m, Bucknell Hall.

April 18 : Humanities Institute Lecture. "Likeness and Presence in American Culture", David Hickey, University of Nevada, Las Vegas, 7:30 p.m., Gardner Lecture Hall, Dana Engineering Building.

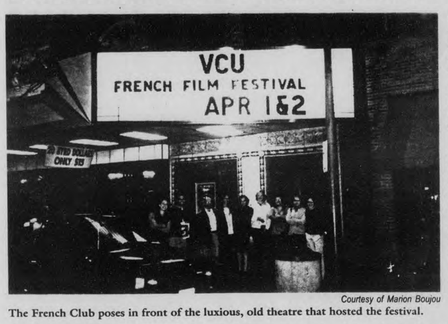
French Film Festival delights students in Richmond



Courtesy of Marion Boujou

The French Club poses in front of the luxious, old theatre that hosted the festival.

By Marion Boujou

"I wish there were many other festival like this one in the U.S!" So says Shamree, one of the Bucknellians who joined the trip to Richmond, Virginia organized by the French Club from Friday March 31 to Sunday April 2. Among the students attending last Thursday's meeting of the club, she was not the only enthusiastic one about the French Film Festival.

This annual event is organized by Peter S. Kirkpatrick, Professor of French at Virginia Commonwealth University. It brings an eclectic selection of newly released French films with their directors and cast members to Richmond's beautiful and historic Byrd Theatre, attracting an ever increasing number of spectators from all over of the country.

Michele, another student who attended the festival, was surprised by the quality of the event's organization and also by the enthusiasm of both the public and the directors and actors present in the theatre.

The atmosphere was informal, and the real proximity between the spectators and the actors, as we were given the opportunity to speak with them during breaks, set this festival apart from other famous festivals, like the major French movie festival in Cannes.

A favorite among club members was the movie *Heroines* by Gerard Krawczyk. It starred two young French actresses, Virginie Ledoyen (also playing in "The Beach" at Leonardo Di Caprio's side) and Maidi Roth, a professional singer who answered the public's questions and sang two songs from the film at the end of the projection.

When I stepped inside the luxurious, old theatre, I felt like I was entering into a movie myself. The question was which movie it would be.

The choices ranged from comedies like "Les Cachetonneurs,"about a struggling band of classical musicians try to pass themselves off as a Viennese chamber orchestra, to costume dramas.

In spite of the relative "density" of the program, and even on Sunday afternoon, after a long weekend concentrating in front of the big screen, the public was still present to make a standing ovation to the last movie of the festival, "Les enfants du Marais", directed by Jean Becker.

I absolutely loved this moving chronicle of a group of friends in rural France in the 1930s. The French Club members and Professor Westbrook, who initiated this trip, also underlined the great welcome that made to the group by their fellows students at the University of Richmond.

This unique experience in Richmond was a pleasure for us all and a marvelous opportunity to experience something off campus while taking in the sun of Virginia.

Courtesy of Marion Boujou

The members enjoy a reception as they discuss the films featured in the festival.

Baltimore Waltz displays exceptional acting

by Katie Parker

"The Baltimore Waltz" was a gripping, beautifully acted and very moving play, performed this past weekend in the Tustin theatre.

Sandie Pisieczko '00 was the true genius behind this masterpiece. A play by Paula Vogel that highlights the dramatic and tragic battle of a brother and sister against AIDS, "The Baltimore Waltz" takes us to the outer rims of our imagination, where the siblings take a fantasy trip to Europe as they had always planned; it is a kind of final testament to the strength of the bond between Vogel and her brother.

When the play was originally written in 1989, AIDS was still in the closet, not considered a "real disease" or even a real threat to anyone but homosexual men. Vogel thus wrote the play with only three characters: a sister (Anna), her brother (Carl) and the Third Man, who played a myriad of roles throughout the production.

In an insightful move by Pisieczko, the Third Man was expanded to include four additional members, in what has been termed the "movement chorus." Ian McNaughter '01 feels this change "is to emphasize the growing prevalence and universalness of AIDS since the play was written."

He adds, "By using one actor to play The Third Man, a face is placed on a virus that constantly eludes us. By using a chorus, that elusive nature hopefully is emphasized."

Members of the audience called the play "stunning" and "very moving", and I left that theater absolutely thrilled with the performance I had just seen.

A cast of students that can only be described as professional, an excellent director, and a terrific play that truly touches us with its humor, its confusion, its emotion and its message. Thank you to Sandie Pisieczko and a wonderful cast for a truly moving experience.

Standing Room Only to perform at Chrysalis Ball

By Erica Delasandro

Quick! Buy your Chrysalis tickets because on Saturday, April 29th there is Standing Room Only!

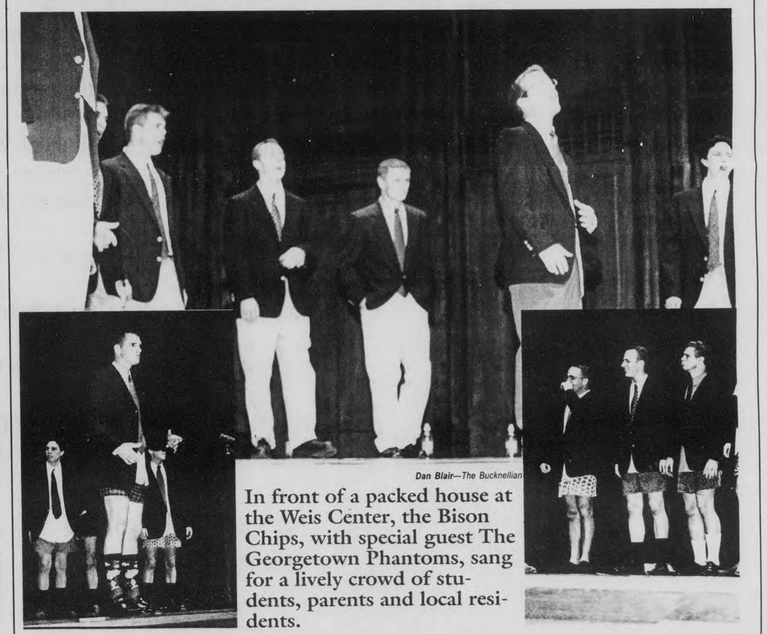
No, that does not mean that there will not be any place to sit. It means that one of the most talented groups of musicians in the country is coming to Bucknell to play at the Chrysalis Ball!

The band Standing Room Only presents a musical experience like nothing Bucknell has ever seen before.

Since Chrysalis celebrates tradition and this year is "Dancing through the Decades," it is only appropriate that Standing Room Only helps the tradition continue. These musicians specialize in performing everyone's favorite music from the past century. Standing Room Only will delve into the musical archives and serenade Bucknell with music from the 20's, 30's, 40's, 50's and 60's.

But they do not stop there! Chrysalis will rock with music from the 70's, 80's and culminate with the best songs of the 90's as Standing Room Only helps Bucknell countdown to a new millenium of tradition. So buy your Chrysalis ticket and get out your dancing shoes because with Standing Room Only playing at Chrysalis no one will want to sit when they can dance!

Party in—or without—your pants!



Dan Blair—The Bucknellian

In front of a packed house at the Weis Center, the Bison Chips, with special guest The Georgetown Phantoms, sang for a lively crowd of students, parents and local residents.

SCIENCE & TECHNOLOGY

Final outcome of Microsoft uncertain

Debate over the Redmond, Wash. congomerate continues; To break-up or not to break-up, that is the question

By Monica Montgomery

Since the April 4 decision on Microsoft's abuse of anti-trust laws, there has been a huge uproar of opinion on what the final outcome should be.

The most controversial solution to the lawsuit is the breakup of the huge conglomerate of Microsoft Corp. Among the possible options, this one has received the most opposition.

According to a poll by ABCNews.com taken the weekend after Judge Jackson's decision, only 23 percent agreed that the company should be broken up into smaller subsidiaries. 53 percent believed that Microsoft should remain as one company with controls, while only nine percent believed that Microsoft should remain untouched completely.

There is a wide concern that the dismantling of such a huge influential company might cause a "dangerous leadership vacuum in this already volatile industry," according to CNN.com.

While some believe that the breakup will cause a void, others believe that there will be a loss of compatibility in the industry.

"[Microsoft software] has certain standards, and with standards come certainty. You know what the platforms will be," Paul Miller, publisher of *Internet World* magazine.

If regulators choose to dismantle the conglomerate, they have two options.

A set of "baby Microsofts" might consist of smaller companies, each with ownership of all operating systems and applications. This scenario would pit fellow Microsoft programmers against each other to increase competition between "companies."

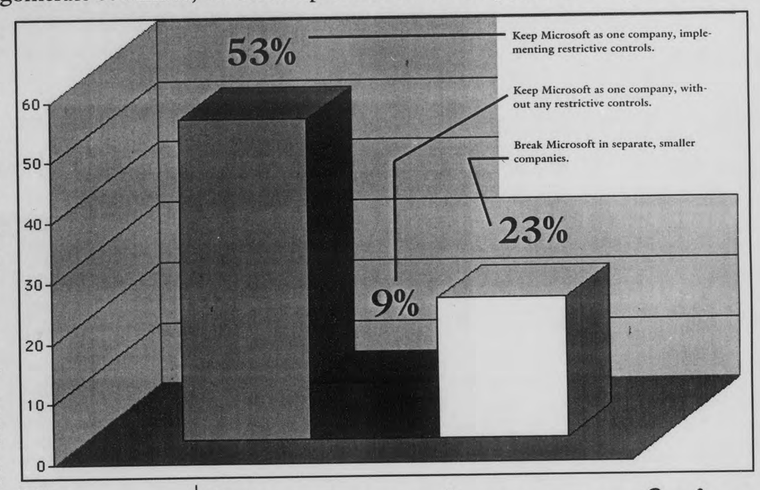
The other option is to divide the Redmond, Wash.-based giant along its product groups. This would result in separate companies, each responsible for different products such as Hotmail, operating systems and applications.

MSNBC.com has reported that the company's stock value has dropped over 15 percent since the announcement of the decision. Microsoft said that none of its employees feel that they are losing out by continuing to work there.

"There is a lot more going on there behind the scenes than just the case, and the industry changes so quickly anyway," Andy Glover '00 said. Glover has been hired to work for Microsoft after his graduation this May.

"I have no reservations for working with [Microsoft]. I think that they have their act together, and however the case ends up, they will be on top everything. I am excited to work for such an influential company," Dennis Quintela '02 said. Quintella will be working at Microsoft for an internship this upcoming summer.

"The nature of the software business will eventually lead to a monopoly scenario," said Stan Liebowitz, a University of Texas economist.



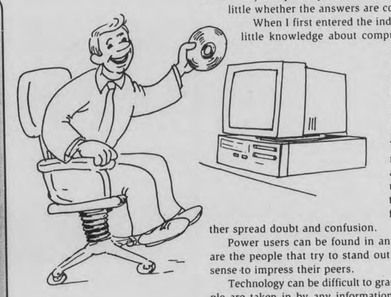
"Power users" cause confusion

By Rick Hoskinson

I am constantly amazed by some of the things that come out of people's mouths.

Computer users come in many flavors, but none are more detrimental to computer education than power users. These are the people who seem to have a wrong answer for everything. Power users, using my definition, are self-proclaimed experts who can answer every computer question ever raised. It matters little whether the answers are correct or not.

When I first entered the industry, I had very little knowledge about computers, and I was willing to accept that. I simply digested any knowledge that was handed to me, regardless of its accuracy. This was my first major mistake as a new computer user. By regurgitating this misinformation, I further spread doubt and confusion.



Power users can be found in any industry. They are the people that try to stand out by spewing nonsense to impress their peers.

Technology can be difficult to grasp, and many people are taken in by any information offered to them. Therefore, power users are often found in high tech fields.

Computers are the current technology rage, and many misleading know-it-alls have found a home in this industry.

One of my chief concerns with computer education is the jargon barrier. Unfortunately, a chief technique of the power user is the misuse of terminology.

I have heard the words icon and program misused often, I sometimes wonder if there is some subset of computer lingo that I have somehow missed.

Most manuals will not misuse these terms, and I have never heard a computer educator give an incorrect definition for these words. The confusion begins with power users who simply have no other words to describe what they are seeing.

Surely, a few individuals spreading nonsense could not be the cause of all the computer bewilderment in America, though.

It only takes a few people spreading gibberish to create mass confusion. If I am told something about computers by someone I consider an "expert," I usually feel comfortable passing that information along to other users. However, most people new to computing cannot determine fact from fiction.

The only advice I can give to new computer users is to consider your sources. If a fellow student or office employee suddenly has a burst of insight into a difficult computer task, consider whether he or she is capable developing such an idea. Then ask if this person was able to judge whether or not this information was accurate.

With these two simple tests in mind, you can help curb the spread of misinformation, and never be afraid to say, "I don't know."

NASA News

continued from page A8

LEADING CANCER INSTITUTE TESTS NOVEL MONITORING TECHNIQUE

A cancer detection technique that uses an advanced sensor is being tested by the prestigious Dana-Farber Cancer Institute, Boston, MA, for use in monitoring the effectiveness of cancer treatment.

The sensor was developed by OmniCorder Technologies. "Since we announced the BioScan System's (tm) clearance by the FDA, we have been inundated with requests to install and test the unit in clinics and hospitals across the country and overseas, for a variety of cancer as well as other disease applications," said OmniCorder president and CEO Mark Fauci.

Dana-Farber is testing several new classes of anti-cancer products, including some — called antiangiogenesis factors — specifically designed to limit cancer growth by inhibiting its blood supply.

NASA AND NATIONAL CANCER INSTITUTE JOIN TO DEVELOP NANO-EXPLORERS FOR THE HUMAN BODY

Imagine ingesting a capsule of similar size, containing microscopic sensors to detect, diagnose and treat disease inside the human body.

NASA Administrator Daniel Goldin and National Cancer Institute (NCI) Director Dr. Richard Klausner will sign a Memorandum of Understanding to develop new biomedical technologies that can detect, diagnose and treat disease here on Earth and in space.

NASA is seeking to develop a new form of patient care—"microscopic explorers"—would travel through the human body looking for disease. This technology will allow NASA to monitor astronaut health and treat conditions in space, where medical test capabilities and communication with Earth will be limited.

NEW, IMPROVED ATLANTIS SET FOR APRIL 24 LAUNCH TO STATION

Space Shuttle managers today confirmed April 24 as the launch date for Atlantis on a mission that will continue the development of the orbiting International Space Station.

"Atlantis' last flight in space was a visit to the Mir space station," Space Shuttle Program Manager Ron Dittemore said. "Since then, Atlantis has had more than 100 modifications and improvements made, making it the most up-to-date Shuttle ever."

Atlantis will dock with the International Space Station and the seven-member crew will unload more than a ton of cargo, performing several maintenance tasks onboard to ensure the station remains in good condition as its orbital assembly continues later this year.

Atlantis is planned to spend almost six days docked with the station before returning to Earth with a landing planned at Kennedy Space Center at 11:23 a.m. EDT May 4.

Do humans exhibit dominant behavior?

By Amanda Libengood

In a pack of wolves or apes there is a clear distinction between the leader and the followers of the social group. The leader—or alpha—is the one who gets to choose his mate first, eats first and receives the best overall treatment. The rest of the group may also reap these benefits but only after the alpha is satisfied.

Often this alpha will exhibit some obvious dominance behaviors toward his fellow group members, to remind them of who is in charge. These could include stealing food, snarling, chest beating or any number of aggressive rituals.

Lately the question has been raised as to whether humans exhibit this same need to demonstrate dominance. Though there is not often the case of a man trying to pick up a woman by showing how long he can beat on his chest, there are some dominance patterns that are obvious among our species.

Take the example of a company CEO walking into a room. The less powerful individuals working under him will often make every attempt to look busy and may at times even break into a nervous sweat. Some scientists have even suggested that every time two people meet, the question of dominance or submission is answered by the way one person will hold eye contact while the second looks away. But can power really be broken down into a staring contest?

It seems as though an all out study of dominance in humans might yield some very interesting results.

Unfortunately though, nothing like this has been attempted. Perhaps this is because the definition of dominance is still rather unclear to scientists.

Is the dominant male the one who can physically dominate every member of the group, even though he may not always choose to do so? Is it the one who gets the most attention? The one who gets the first pick of resources? The one who displays the most aggression?

Until this definition is more clearly established, any official dominance study would provide rather vague results.

Despite the haziness of the line between dominant and submissive individuals, dominance does seem to set the tempo and direction in our everyday lives.

If "the boss" says that work starts at 9 a.m., everyone reports to work at precisely that time. Even when "the boss" tells bad jokes, all of the workers laugh like it was the funniest thing they had ever heard. Is the reason for this simply that once a person realizes that he is subordinate, he makes every attempt to satisfy his alpha?

Even if it were accepted that dominance does indeed exist in the human species as it does in monkeys, wolves, chickens and other animals, what could be the benefit?

Dominance could be the reason for success. When there is rank among individuals, the leader can determine goals, strategize methods to achieve those goals and then delegate others to lead the smaller tasks involved in the overall success of the project.

Should disagreements arise between the task leader and task force, the project leader is called in to mediate and solve the problem, thus allowing the project to be resumed. Without this sort of leadership, the project may never have succeeded based solely on the organizational factor.

With no leader, the smaller tasks may not have been properly assigned, or group members may have overlapped some pieces and forgotten others altogether. It is the dominant one of the group—the alpha—that ensures overall success.

Geneticists solve problem of not enough head

By Matt Albert

Science has come a long way in recent history. It has advanced by leaps and bounds in an effort to make better lives for billions. In the past year, discoveries in the field of genetics have made headlines in scientific journals across the world.

Somewhat lesser known work in this area is going on in Europe, and it has little to do with mapping the human genome. It concerns beer making.

Currently, breweries in Germany are using science to research ways of making a better product. In particular, they are concerned with making a more dependable and alonger lasting head.

The head is a very important feature in the appearance of any beer. A full, rich head entices, while a small head can make the beer seem flat and tasteless. Being susceptible to many common elements, a head can be destroyed quite easily.

Grease from potato chips, lipstick, and even weather conditions can adversely affect the presentation. Bartenders work ferverishly to keep mugs and glasses squeaky clean to ensure dirt does not damage beer's head.

To combat the problem, beer manufacturers are investigating the principles behind head. At the University of Berlin, Ulf Stahl is researching this area. "The basis of foaming in beer is the *LTP1* gene," Stahl said. The protein made by this barley gene dissolves in fat, but does not mix with water. When sprouted barley is ground up to make the beer, the protein is forced into water. As these two entities repel each other, the protein escapes by forming a thin film around carbon dioxide bubbles rushing to the top of the liquid.

It is this process that forms the foamy surface at the top of glasses called head.

According to newscientist.com, Scientists have concluded that the more protein in the mixture, the more stable the beer's head. Since the protein prefers bonding with fat, any fatty substance passing near the foam will allow the protein to rebond rather than stay stretched around the bubbles.

Brian Watson—The Bucknellian

Although researchers have found the gene in brewer's yeast that makes the foamy head on beer, Guinness—pictured above—is unlikely to change its recipe.

The amount of *LTP1*, however, is unpredictable and varies widely. "More is made in a dry summer than a wet one, " said John Hammond of Brewing Research International in Surrey, England. Any batch of beer therefore may or may not produce enough head.

As a result, scientists and brewers have begun putting the *LTP1* gene into brewer's yeast, ensuring a suitable amount of protein regardless the quality of barley used. This translates into a presentable and attractive beer no matter what the drinking conditions may be.

Though excited about the idea, Stahl does not see this new "super beer" going into production for another couple of years.Though brewers have not gave an official agreement to produce the new-age drink, they remain keen to improvement. Regardless, many beer lovers are waiting for the day they can drink their chosen beverage, full of head, while reading the news on the front page of *The New England Journal of Medicine.*

NASA AWARDS UNIVERSITY CONCEPT STUDIES FOR EARTH SCIENCE PROJECTS

NASA's Office of Earth Sciences will fund four innovative Earth system science investigation concepts for future development as complete spaceflight missions or secondary payload instruments through the University Earth System Science (UnESS) Project.

"The UnESS program was established to foster the development of the next generation of Earth system scientists, engineers, managers, educators, and entrepreneurs through significant and meaningful hands-on student involvement in Earth observation space missions at the university level," said Dr. Ghassem Asrar, Associate Administrator for Earth Sciences.

The hands-on student involvement in these mission concepts ranges from helping prepare the proposals to analysis and distribution of data to the science community.

SURVEY SHOWS NASA EMPLOYEES AMONG MOST SATISFIED FEDERAL WORKERS

According to a newly published government survey, NASA employees enjoy a greater level of job satisfaction than most other federal workers.

NASA's highest favorable ratings were in the areas of employee job satisfaction, customer orientation and placing reinvention as a priority.

"I am incredibly proud of these results," said NASA Administrator Daniel S. Goldin. "They represent a strong statement of the top-to-bottom excellence of the NASA team."

NASA, the nation's premier civilian research and development agency, manages 10 facilities in eight states around the country. The Agency not only launches Space Shuttles and satellites, but also conducts basic aeronautical research and is deeply involved in helping the scientific community better understand our planet through advanced Earth Science.

PLANET HUNTERS ON TRAIL OF WORLDS SMALLER THAN SATURN

Planet-hunting astronomers have crossed an important threshold in planet detection, with the discovery of two planets that may be smaller in mass than Saturn.

Finding Saturn-sized planets reinforces the theory that planets form by a snowball effect of growth from small to large in a star-encircling dust disk.

The discovery was made by planet-sleuths Marcy, Paul Butler of the Carnegie Institution of Washington, and Steve Vogt of the University of California, Santa Cruz, using the mighty Keck telescope in Mauna Kea, Hawaii.

.TV Internet domain sells for $50 million

A small island nation in the South Pacific reaps the benefits of its Internet domain

By Matthew Trunnell

You may have never heard of Tuvalu before, but its Internet domain is about to become one of the most popular on the Internet.

Tuvalu is the world's fourth smallest country, covering only 10 square miles across nine atolls in the South Pacific. To give perspective, it is about one—third the size of the Dallas-Ft. Worth International Airport, according to ABCNews.com. Most of Tuvalu's 10,000 inhabitants have never seen a computer. Nevertheless, Tuvaluans stand to make quite a profit from their new Internet resource.

DotTV, an Internet start-up company, has acquired the rights to .tv, Tuvalu's assigned national domain, for $50 million.

The most popular top-level domains today are .com, .net, and .org—all of which are owned by Network Services, Inc. In addition to those domains, every country is assigned a national domain; the U.S. owns .us, Canada owns .ca, and Britain owns .uk.

In the U.S., most users of the .us domain are public schools and state governments. Since we were the first to the Internet, U.S. companies have taken most international domain names ending in .com and .org.

With its newly acquired top-level domain, DotTV plans to sell new domains like *nbc.tv* or *seinfield.tv*. After paying $50 million, the company has high hopes for the value of such addresses. The primary targets are network stations and their television programs, but DotTV plans to market to several other organizations as well.

Prices for the domain names start at $1000 per year, while the most sought-after names—like *i.tv* and *hello.tv*—are being auctioned. And coveted names certainly have the potential for high values. The record sale price for an Internet address is held by Business.com, which was sold in 1999 for $7.5 million.

Idealab, the company's financial backer, has sponsored dozens of other Interent start-ups, including Internet retailer Etoys.com, popular portal GoTo.com, and PayMyBills.com, a personal bill management service. But DotTV could be Idealab's most lucrative venture yet.

Courtesy of ABCNews.com

Until recently, Tuvalu's barely-existent economy was based on fishing, coconut oil and stamp production.

"[DotTV] provides people an easy way to carve out a space in the brand space—the mind space—of consumers," Idealab Chairman Bill Gross said. Exactly how willing companies will be to spend millions for a voice in that mind space is still uncertain. While .com addresses are well established, no web sites yet exist in the .tv domain space.

Meanwhile, the citizens of Tuvalu are very content with the deal. The new money will pay for needed doctors to staff the hospitals on each of Tuvalu's islands, along with more support for the local schools and roads.

The specifics of the plan call for the $50 million in royalties to be paid over the next ten years as more domains with a .tv ending are sold.

The only traditional resource on the island is fish. But the intangible treasures of the Internet economy are warmly welcomed in Tuvalu, regardless of the lack of technology on the islands.

"We were very, very, very poor," said Koloa Talake, a member of Tuvalu's parliament who helped negotiate the deal with Idealab.

Although Talake holds a seat on DotTV's board of directors, according to *Tuvalu Online*, he has never seen a web site.

Glover and Justice bring black history to life

"An Evening With Langston and Martin" invigorates and educates diverse crowd at Weis Center with realism, emotion

Tim Choate—The Bucknellian

Danny Glover (left) and Felix Justice (right) have been performing "An Evening with Langston and Martin" for almost a decade.

By Ryan Delahanty

Danny Glover and Felix Justice, two prominent African-America actors, performed their living history show, "An Evening with Langston and Martin," on Monday, April 17, in the Weis Center this past Monday. This is the second time Glover and Justice have brought their show to the University, the first being in 1996. The two teamed up in 1991, doing their presentation for nearly a decade.

Glover, most known for his recurring role in the *Lethal Weapon* movie series, read several poems by Harlem Renaissance author Langston Hughes. These included Hughes' more recognized works such as "What Happens to a Dream Deferred" as well as several of his columns featuring the character "Jess B. Simple" that ran in the *Chicago Defender*.

Felix Justice is a celebrated stage actor who has been portraying Martin Luther King Jr. in his one-man show "Prophecy in America" since 1981. Justice read one of Dr. King's speeches regarding the war in Vietnam, choosing to bypass many of the more well-known King speeches such as "I Have a Dream."

"A lot of young people don't know that one of the first voices to address the issue of Vietnam was Martin Luther King," Justice said.

Glover remarked that he chose Hughes because he wrote during a tumultuous period of time that saw such remarkable events as "the end of World War I, the Great Depression, World War II, the beginning of McCarthyism, the HUAC committee, the Chinese communist revolution, along with the Civil Rights Movement. "

"The period that he wrote during was an amazing 45 years," Glover continued. "1921 to 1967 was an extraordinary period of time in regards to the movement and evolution of black political thought ... Langston added breadth to that."

Glover and Justice have been performing "An Evening with Langston and Martin" for nine years. They bring the show to many colleges and universities around the country and have found audiences to be very receptive.

"The welcome we received last time at Bucknell and at colleges across the nation indicate to us that young people are interested," Justice said.

Glover added, "young people take a bad rap, the older generations say that they don't take any issues seriously. We have not found that to be the case at all."

> *The most important thing is that people remember what happened in our past, so that we can look at those events in light of our world today."*
>
> ***—Danny Glover***

Justice said, "We see ourselves as presenters of living history and this enables people to see where we've been and where we are going. Danny and I both see ourselves as educators first." Justice continued, "We both feel it is important, as recognizable figures, to get the message across about our history."

Glover concurred, adding, "If people want to listen to me because I am an actor, then that's fine. The most important thing is that people remember what happened in our past, so that we can look at those events in light of our world today."

Also, Glover spoke about how he felt race relations were today, alluding to the now infamous "taxi debate in New York City.

He said, "I think in the south, during the civil right era there was a polarization of blacks and whites. In the north, it was a little more shaded with racism being not as easy to spot. But, until we can come together and work out our differences, then the problem will stick around."

Glover was asked what the purpose of the whole presentation was and he said, "The point is to take people that were not around at that time, during the Civil Rights era, and take them back in time, to take a look at then, and see where we are now."

The Student Lectureship Committee with the help of Bucknell Student Government, the Chaplain's office and the Multi-Cultural Center brought the program to the University.

It was the first time in recent

Danny Glover read several excerpts from Langston Hughes' collection, including newspaper columns, comical pieces and poems.

University celebrates Earth Week

Students turn out for fun, educational festivities celebrating environment

By Jennifer Jenchura

Environmentally-conscious students, faculty and residents gathered on campus last week for various Earth Week observances.

The Earth Day Planning Committee sponsored events for a full week before Earth Day on April 22, highlighted by Saturday's fair in Smith Quad that featured speakers, bands, crafts and food.

Earth Day has been celebrated at Bucknell for the past 10 years and involves many members of student activist groups such as the Partnership for Unveiling Labor and Sweatshop Exploitation (P.U.L.S.E.) and the Student Environmental Action Coalition (SEAC).

Mike McCaffrey '00, a member of the Earth Day Planning Committee, said, "I think it helped it was such a nice day out. The bands were good too."

Meeting since the beginning of the semester, students worked hard to bring a substantial number of activities for students, professors and the borough of Lewisburg.

The group is also hoping to raise a small profit during the week from the activities. T-shirts and canvas bags were on sale during Earth Week in the Langone Center.

Any profits raised will be donated to the Merrill Linn Land and Waterways Conservancy, an organization devoted to environmental protection in Union County. The group expects to raise over $200.

This year's celebration included a variety of activities such as the popular Earth Day Fair, Faculty Panel and Tree Planting.

One of the professors at the faculty panel, Erik Gergus of the Biology Department felt that "the discussion of my research and knowledge of amphibian diversity and conservation in the desert southwest was most appropriate."

New for this year was Sun Day, held April 16, in which people could learn more about the sun at the Observatory and make sundials as well as participate in children's activities.

On Tuesday, April 18, the Animal Defense League sponsored an animal cruelty , and the Pennsylvania Association for Sustainable Agriculture discussed ecologically-sound growing methods.

Some other events planned for the week were

Students were entertained with outdoor music during Earth Week in Smith Quad.

Borough set to address housing concerns

By Peter Van Emburgh

In light of the increasing resident complaints about students' behaviors downtown and yet another eviction, the Lewisburg Borough Responsible Housing Committee is picking up steam.

According to former president and current member of the Lewisburg Borough Council, Stacy Hinck, the committee faces many issues in addition to the alcohol-related complaints including the proportion of owner-occupied and rental properties in the town.

Lead by Borough President Don Baker, the committee will be comprised of new members by May 1.

Perhaps the biggest problem facing the vitality of the town is a troubling statistic—approximately 40 percent of the homes in Lewisburg are owner-occupied while the remaining 60 percent is considered rental properties, according to Hinck.

"This statistic is not a situation for the town," Hinck said. "The figures should be reversed."

Because the Borough is landlocked, the Council aims to maximize the revenue generated by property taxes. Consequently, the Borough will seek to improve the overall condition of each property, as well as decreasing the amount of rental spaces.

The goals for the committee are simply to increase the responsibility of the student renters and increase ownership in the town. "The committee intends to curb the excesses of student behavior downtown," Hinck said.

Hinck explained that outside investors were coming into Lewisburg to gain a share of the lucrative rental market in the 6th and 7th Street areas downtown.

"This only encouraged and increased the rental proportions," Hinck said. "The number of rental properties in Lewisburg has become too much."

Hinck expressed that she understood that most student renters were very respectful of the community, but the town needed encourage students to be more respectful of their neighborhood.

"It is not our intent to scare students back to campus," Hinck said. "I think it's extremely positive to have a student mix downtown, but they must respect that this is a community—the future of the Borough rest in turning the proportion [of renter vs. owner occupied homes]

NEWS ANALYSIS: IMF Protests

By Jim Leahy

Protesters last weekend convened on the streets of Washington to voice their negative opinions of the International Monetary Fund and World Bank. But the meetings happened and the protesters went home. The problem is, not many people know what the protesters are angry at and what the IMF and World Bank do.

The World Bank is a finance organization. Its main role has been to finance development in countries too poor to finance it themselves. They have been, essentially, international lenders to countries throughout the world. Their goal has been to give a better life to the third world.

The IMF, on the other hand, has been an international auditing agency operating in Washington, miles away from its customers. If developing nations' economies were faltering or if their finances were on the wrong track, the IMF would step in and fix things. And that fix would come in the form of massive spending cuts.

Both organizations would say they have changed in the past few years. Instead of focusing on tangible development signs like new roads and power plants, they now look towards poverty levels as a true indicator of progress.

The IMF and World Bank are also quick to point out the Highly Indebted Poor Country initiative. As part of this program, the World Bank and its partner lenders are pledging to forgive over $25 billion in debt held by some of the world's poorest countries.

Mike McCaffrey—The Bucknellian

But the protestors see it a little differently. They think that the bank, while trying to change the way it does some things, is just doing the same basic things under different rhetoric. They are also not pleasing many critics because their economic visions are simply different. And that is not likely to change any time soon.

While many think that the criticisms of the World Bank are coming only from protesters who gather outside the meeting and try to impede its progress. Not so. Some of capitalism's biggest supporters launch attacks at the World Bank and IMF. US Treasury Secretary Lawrence H. Summers has called its aid benefits "very disappointing."

Last week's protest were decidedly more subdued than the ones that took place at the last meeting of the World Bank and IMF. That time, violent protestors overwhelmed Seattle. This round of protests was less violent even though the D.C. police were prepared. They used some force to get their way and the method worked.

And many of the people in Washington would say that their mission was a success. The delegates inside the meetings talked to a large extent about poverty. Much more than they would have discussed it.

Public Safety Log

April 12, 2000

INSTITUTIONAL VANDALISM — An employee reported to a Public Safety that unknown persons(s) attempted to gain entry to the Langone Center Student Mailroom by trying to remove the lock and door handle. The incident is under investigation.

April 13, 2000

DISORDERLY CONDUCT/ RECOVERED PAINTBALL GUN — Public Safety responded to Larison Hall for the report of three students shooting paintballs in their rooms and causing damage. Public Safety recovered the paintball gun along with paintballs. Citations for disorderly conduct issued.

April 14, 2000

INFORMATION — Public Safety responded to Vedder Hall for the report of beer being poured out a window. Positive identification of alcohol could not be made and a report was filed with the Office of Housing and Residential Life.

INFORMATION — Public Safety responded to Swartz Hall for the report of unauthorized solicitation. The individuals were advised of the university policy on soliciting and escorted off campus.

STUDENT HEALTH TRANSPORT — A student requested transportation to Evangelical Community Hospital Emergency room for treatment of an allergic reaction. The Student Health Services driver transported the individual to the hospital. The student later returned to campus.

April 15, 2000

UNDERAGE CONSUMPTION — A student reported to Public Safety that an intoxicated male was in Smith Hall. Public Safety responded and located the male who later admitted to consuming alcohol although under the age of 21 years. Citations were issued for underage drinking and disorderly conduct.

THEFT — A student reported to Public Safety that unknown person(s) did remove his video camera from a room at KDR Fraternity. The incident is under investigation.

BU PROPERTY DAMAGE — Public Safety responded to Dana Engineering for the report of broken windows in an exterior door. No witnesses or suspects could be located in a search of the area.

BU PROPERTY DAMAGE — Public Safety responded to Swartz Hall for the report of broken windows in an exterior door. No witnesses or suspects could be located in a search of the area.

BU PROPERTY DAMAGE — Public Safety responded to Phi Kappa Psi Fraternity for a fire alarm activation caused by water dripping onto the alarm panel from a swimming pool inside the building. The pool was removed and a technician responded to restore the fire alarm system.

DISORDERLY CONDUCT — A student reported to Public Safety that a male had struck her with a toilet plunger while she attended a function at Phi Gamma Delta Fraternity. The incident is under investigation.

INFORMATION — Public Safety responded to Phi Kappa Psi for the report of two students entering the building without permission. Upon arrival, Public Safety found that the individuals had exited the building and the fraternity did not wish to file charges.

PROPERTY DAMAGE — Public Safety responded to Smoketown Road for the report of golf balls being driven into a window in a Bucknell West Mod. The individuals who were responsible were located and agreed to make restitution. Charges are pending.

April 16, 2000

CRIMINAL MISCHIEF — A student reported to Public Safety that unknown person(s) threw a golf ball through his bedroom window at Mod 5. In addition, it was discovered that two other windows had been broken in the same building. The incident is under investigation.

INSTITUTIONAL VANDALISM — Public Safety responded to Dana Engineering for the report of several different acts of vandalism. The damage included dismantling various computer parts and office equipment. The incident is under investigation.

April 17, 2000

INFORMATION/OFF CAMPUS SUSPICIOUS INCIDENT — A student reported to Public Safety that a male attempted to gain entry to her vehicle while she was waiting at a red light at 3rd & Market St. in downtown Lewisburg. Lewisburg Police notified. A Public Safety alert was issued. The incident is under investigation.

LARCENY/THEFT BY UNLAWFUL TAKING — A University student reported to Public Safety that unknown person(s) had taken her locked bicycle from the bike rack between Larison and Vedder halls. Lewisburg Police was notified. The incident is under investigation.

April 18, 2000

INFORMATION/MINOR VEHICLE ACCIDENT — Public Safety responded to 7th St. Parking Lot for the report of a vehicle accident.

Two vehicles owned by an employee and a student respectively, collided as each operator backed out of parking stalls. No injuries sustained and only minor damage. The individuals exchanged insurance information.

This Week in Bucknellian Headline History

Varsity Wins Easily

April 29, 1907

The Varsity easily outplayed Lock Haven Normal in all departments of the game on Saturday afternoon shutting them out 14-0 in a seven-inning game. The weather was ideal for baseball and this seemed to give the team more life and action than has been seen at any time before this season. All kinds of tricks and plays were pulled off, some of them dating back to the early origin of the game.

Leach pitched an easy, steady game although a trifle wild at times. Eleven opposing batsmen failed to find his elusive "benders" after three unsuccessful tries and he allowed but one hit, a drive to right field for two bases by Thomas in the seventh inning. With men on base, the visitors could not hit him safely at all and the faultless work of those behind him killed all chances of Lock Haven scoring.

Each player on the team connected safely, once at least, and during Bucknell's six-inning bombardment, a total of fifteen hits for nineteen bases were recorded.

Hubert Humphrey Address to Highlight Convocation

April 18, 1968

Vice President Hubert H. Humphrey will speak at Convocation Saturday, May 4, at 1:30 p.m.

His address will highlight a two-day Convocation on Individual Responsibility in a Free Society, according to the announcement by the University's president, Charles H. Watts II.

The Vice President will speak on the topic "Personal Commitment and the Community" in his talk in Davis Gymnasium.

Over $300,000 Budgeted for Route 15 Underpass

April 21, 1989

Pending approval from the Board of Trustees, a nine by twenty-foot underpass will connect the main campus to Bucknell West (the Mods) next year. According to Physical Plant Director Robert Naugle, the underpass itself will be of a concrete box design with one entrance between the Mods and the Psychology Lab and the other next to Faculty Court facing the fieldhouse. Naugle said that the original budget for the underpass was set at $239,000, but the final cost could reach over $350,000.

Barry Maxwell, vice president for administration, said that the underpass is a necessary addition due to an increase in vehicle traffic on Route 15 and due to an increase of student traffic across the highway. Maxwell cited changes in parking regulations allowing students to park on the other side of Route 15 as one reason for the increase in pedestrian traffic.

According to Maxwell, a committee studied this problem last spring considering both an underpass and overpass. The committee determined that an underpass would be more feasible. Ellis Harley, associate vice president for finance, said that the pedestrian overpass would have been considerably more expensive and less convenient for students.

Current plans, according to Maxwell, call for the installation of a security phone and a video monitoring system on both sides of the underpass. Maxwell said that a fence will be built along the West side of Route 15, isolating the Mods from the highway.

Construction soon to begin on new Music building and Residence hall

April 22, 1999

As the University nears the end of another school year, students are packing up their bags for a well-deserved summer vacation away from campus. But as most students relax on a sandy beach or travel the world, bulldozers, dump trucks and dozens of construction workers will be hard at work making major changes to the University's campus.

Beginning as early as this month, the University will begin the much-anticipated residence hall project. The new building will be located on Swartz field not far away from the stadium parking lot. However, even though Swartz field will no longer be available, the University has made plans to create an additional recreational field to compensate for the lost space.

In addition to the new residence hall, construction for a new music building (officially named the Siegfried Weis Music Building) is planned on roughly the same time schedule. Located between Swartz Hall and the Weis center, the new building will occupy a majority of the parking space that is currently available there. The building will include a wide variety of rooms, including an electronic keyboard laboratory, a library, a recital hall, student practice rooms, faculty offices and classrooms.

Crista DiCarlo '01 hopes that the University will provide enough parking spaces after they begin construction. "I think the University should have an alternative parking location before they break ground, otherwise I think there will be a lot of problems," she said.

The University has begun working out the problems the new building will create. Currently, there have been proposals for an 'alternative parking plan' that has been discussed with the Parking Committee, the Committee on Complementary Activities and BSG.

There will also be a number of smaller projects that will take place. Some of these projects include upgrading air-conditioning and heating systems in several facilities, maintenance work and upgrades of the roof of the Weis Center, enhancing the classroom spaces in certain buildings such as Vaughan Literature Building and changes to the first floor of the library.

Court Ruling Doesn't Preclude Taking Elian from Relatives, Reno Says

A federal court ruling that Elian Gonzalez is to remain in the United States pending an appeal on a request for an asylum hearing does not mean the Justice Department cannot reunite him with his father, Attorney General Janet Reno says.

"The court order does not preclude me from placing Elian in his father's care while he is in the United States," Reno said in Oklahoma City.

Reno said the Justice Department, which has long wanted to reunite Elian with his father, will "abide by" the ruling requiring the boy to stay in the United States while the appeal is decided on whether Elian should get an asylum hearing.

The three-judge panel in Atlanta declined to issue an order forcing the Miami relatives to turn Elian over to this father, as the Justice Department had requested. Elian's great-uncle, Lazaro Gonzalez, has already defied an Immigration and Naturalization Service order to turn over the boy.

The lawyer for Juan Miguel Gonzalez, the boy's father, said Wednesday's ruling places the "obligation to act squarely on the shoulders of the attorney general."

Attorney Gregory Craig recounted the assessment by the government's medical expert, Dr. Irwin Redlener, who said Elian would suffer harm if left at the Miami home.

"We call upon the United States to take immediate action," Craig said. "It is unconscionable to wait one day longer. To do so would only cause more harm to Elian."

Craig added, "If the government does not act immediately to remove Elian from the care of Lazaro Gonzalez, and return him to his father, it will bear responsibility for the harm that continues to be inflicted upon Juan Miguel's beloved son."

The Miami relatives had also asked the court to order both sides into mediation. The court refused that request as well. "Although we may direct the parties to participate in mediation ... we choose not to do so at this time."

Farmers Lift Roadblock of Key Bolivian Road

Cocoa leaf farmers lifted roadblocks on a key road crossing the Andes and reaching La Paz on Tuesday, after the government agreed to suspend the eradication of their plantations.

Gabriel Carranza, a leader of the farmers, said the roadblocks were lifted after the government agreed to open negotiations on its plan to destroy the coca leaf plantations in the Yungas, a tropical region 205 kilometers (130 miles) east of La Paz.

The government confirmed negotiations were starting immediately in La Paz. The blockade was erected the day before to protest the government plan, which is part of the government's efforts to eliminate the cocaine industry in Bolivia over the next year.

Bolivia is the world's third cocaine producer, with an average production of 100-120 tons a year, according to authorities. Coca leaf is used to make cocaine.

Officials Look for Clues in Wreckage of Philippines Air Disaster

Searchers in the southern Philippines city of Davao have recovered the cockpit voice recorder of an Air Philippines jet that crashed Wednesday, killing all 131 people aboard in the country's worst aviation disaster.

The plane's blue tail section lay damaged and smoking in between the tall, thin palm trees of Samal Island, a resort destination in the southern Philippines. All around were scattered pieces of the jet, smoldering in the coconut grove where the plane crashed.

Some grief-stricken family members gathered at Davao Airport. Two of the victims have been identified, officials said, but their names are not being released until relatives can be notified.

The 22-year-old plane had passed a routine maintenance check before taking off from Manila about 5:20 a.m. for Davao. The plane tried to land at Davao airport, but air traffic controllers said another plane was on the runway and had to be moved. Flight 541 circled twice, officials said, then crashed at about 7:45 a.m.

The government weather bureau said weather conditions at the time of the accident were good. Weather bureau officials said visibility at the time of the crash was 11 miles.

Officials said Davao airport does not have full equipment for an instrumental landing.

But Transport Office chief Jacinto Ortega told reporters that the jet sheared the tops off trees atop a 500-foot hill as it approached the airport about 620 miles southeast of Manila.

"That's not the normal height of the approach path," he said.

Flight 541 was carrying seven crewmembers and 124 passengers, including four infants not listed on the passenger manifest. The plane was built to carry as many as 130 passengers, according to Boeing.

Diallo's Parents File $61 million Lawsuit Against New York City Police

The parents of Amadou Diallo, the West African immigrant slain by four undercover New York police officers last year, have filed a $61 million wrongful death lawsuit against the officers and the city.

The parents had promised to file the suit, which family attorney Anthony Gair said was filed Tuesday morning in the Bronx Supreme Court.

The suit accuses the police and the city of negligence for intentionally shooting Diallo, and for depriving him of his constitutional rights through excessive force, racial profiling and inadequate officer training.

The four white officers — Edward McMellon, Sean Carroll, Richard Murphy, and Kenneth Boss — confronted Diallo on February 4, 1999, as he stood in the vestibule of his Bronx apartment. They fired 41 bullets at Diallo when they mistook his wallet for a gun; Diallo was struck by 19 of those shots and died at the scene.

Diallo, 22, who worked as a street vendor in Manhattan, was unarmed and had no criminal record since emigrating from Guinea. A racially mixed jury acquitted the officers of murder Feb. 25 after a month long trial in Albany, N.Y.

Bucknell Brigade to host speaker

By Jim Leahy

The Bucknell Brigade has worked to promote multicultural awareness on campus and off, most notably in its trips to Nicaragua's Nueva Vida camp.

Louis E. Perego Moreno, the Executive Director of Skyline Community, will give a talk entitled "Multiculturalism in then New Millennium" next Tuesday night at 8 p.m. in the LC's Gallery Theatre. Mr. Perego will also be attending classes and giving workshops as he visits the campus Monday through Wednesday.

Perego's group, the Skyline Community, is a non-profit organization committed to the education, empowerment, and health of minority youth and women. It was founded in October of 1994.

In 1988, he founded Skyline Features, a multimedia production company specializing in multilingual entertainment and information programming.

Skyline Features offers inner city youth the ability to produce documentaries that present role models from the community and issues of prevention through the Skyline Charter Scholarship program.

It also seeks partnerships with private organizations to serve the young, advocates mentoring, and runs a college speaking circuit.

Perego has served on the boards of Women in Cable and Telecommunications, the National Association of Minorities in Cable, and Young Professional Latinos for Community Empowerment. He currently is a member of the board of directors of Northern Lights Alternatives.

The diverse group of topics that Mr. Perego concerns himself with includes' drug and alcohol abuse, depression, violence and teen suicide.

He has appeared at many colleges and universities around the nation. The list includes Boston University, Columbia University, Smith College, and Williams College.

Maria Lopez '02 complemented Perego in his accomplishments. "He seems to be very conscientious about the needs of the campus and is trying to meet those needs. To me, he sounds empowering and inspiring."

The lecture will be held Tuesday night in the Gallery Theatre. The primary sponsor for this event is the Bucknell Brigade.

Campus Briefs

Alumni to be honored

University alumni Ralph Waite '52, Bruce Lundvall '57 and Kenneth A. Baker '69 will be honored with the Association for the Arts Award for Artistic Achievement on Saturday, April 29 at 5:30 p.m. in the Terrace Room.

Waite starred on "The Waltons" for 10 years and directed 15 episodes. His recent acting and directing credits include ABC's "Murder One," and stage productions of "The Gin Game," "Anna Christie," "Other People's Money" and "Death Of A Salesman."

Lundvall currently serves as President of Capitol Records' Jazz and Classics label and has received the Jazz Foundation of America's Lifetime Achievement Award. In his 36 years in the music industry, he has signed such famous names as Willie Nelson, Herbie Hancock, Dexter Gordon, James Taylor, Peter Tosh, Stan Getz, Wynton Marsalis, Bobby McFerrin, Ruben Blades and Max Roach.

Baker, *The San Francisco Chronicle*'s art critic, is a renowned expert on Minimalism and has received the Manufacturers' Hanover Trust Art World Award for Distinguished Art Criticism. Baker will not be present at the awards ceremony.

NPR host to lecture

The Student Lectureship Committee, Gallery Series, and the department of music will co-sponsor a lecture by National Public Radio's (NPR) John Schaefer, entitled "Music and Technology: The Glenn Gould Legacy in the New Millennium," on Wednesday, April 26 at 8 p.m. in the Room 201 of the Music and Arts Building.

Schaefer, producer and host of NPR's "New Sounds" program since 1982, will present excerpts from various artists of different genres.

He has written several books, including *New Sounds: A Listener's Guide to New Music*, *The Cambridge Companion to Singing*, and a biography of La Monte Young in Sound and Light published by the Bucknell University Press.

memory that such a recognizable figure has come to campus and the event was well received by the student community.

The performance opened with an introduction by the president of the Student Lectureship Committee, Sara EnDyke. Justice emerged as Martin Luther King and read a stirring speech. Glover then took the stage as himself and offered biographical information about Hughes and offered personal insight as to why Hughes' poetry has withstood the test of time. He read many Hughes poems, touching on every major style Hughes worked with.

Following the readings, audience members were invited to ask Justice and Glover questions and they ranged from discussing black apathy in global affairs to the sexual orientation of Hughes.

The question and answer session lasted for 45 minutes; Justice and Glover were more than happy to discuss any issue that was brought up.

HOUSING from page 1

around."

Many students are getting wary in light of the recent evictions: one eviction on Market Street in March and on Monday, students were forced to relocate from a house on St. Catherine's Street after their house was deemed "uninhabitable" due a broken sewage pipe.

"It is an unfortunate situation and inconvenient with regards to timing- however, I do not blame the code administration," Vic Marks '00 said. "Their efforts to make the borough a livable and safe place is commendable and important, in light of the events at Bloomsburg University."

With essentially two weeks remaining in the semester, the students are frustrated due to the abrupt relocation.

"As for me, I am living in a much smaller room and it has been a difficult time for me," Peter Kadens '00 said. "We have a lot to worry about at the present time and this does not exactly alleviate our other worries."

Student activism: Better late than never

Volunteerism has never been lacking in the student body, but genuine activism has been all but dead on campus and throughout most of the country for decades.

But this past week has seen the most motivated examples of student activism in recent memory. Numerous events covered in this week's issue of *The Bucknellian* dispel notions of student apathy that have plagued our campus' reputation for years.

The actions displayed this week reflect true efforts by many Bucknellians, whether in support or protest, to stand up for what they believe in.

Events like Earth Week, Take Back the Night, Diversity Day, Jeans Day, the student walkout and the P.U.L.S.E. protest against Wal-Mart involved many dedicated students and community members.

Off-campus exploits like the IMF/World Bank protests in Washington, D.C. allowed University students a chance to participate in an event that received prominent national news coverage.

The recent activity shows promise for the future. Bucknellians went out and tried to make a difference, and for that they should be commended.

So is apathy dead? Or is this just a coincidence of annual events falling in the same week?

The answer is unclear, but one thing is certain—University students showed they are not blind to prevalent issues or afraid to take a stand.

Sadly enough, despite the noticeable activity, many students sat idly by, not even noticing many of the events taking place around them. Numerous student groups acted; others slept.

But there are still many battles to be fought. Those who sat back this week should look at the students who rallied against injustice and nurtured pertinent issues and find some inspiration. Involvement in these activities provides us with perspectives unattainable through laziness.

There are over three thousand students at the University—and thousands of causes to support. The degree of activism and support exhibited on and off campus can very well be contagious. The students give the University the apathetic moniker; maybe now they can be the ones to get rid of it.

Should Elian Gonzalez be sent back to Cuba?

Yes

By Rebecca Rowland

Growing up in the United States we are taught that Cuba is a terrible, terrible place. That is one of the downfalls of the American education - it is incredibly biased. We are never taught the positive side of communism and half of the school age population thinks Fidel Castro is Satan.

Cuba is not hell and Fidel is not Satan so why can't Elian go back home to his father? His Miami relatives haven taken care of him since he washed up on our shores, the victim of a capsized boat that killed his mother, several months ago. The Miami Cuban population has rallied around Elian, seeing him as the victim of a tragedy facilitated by Castro's tyrannical rule. They see Elian doesn't want to go home and that he does not want to see his father, he wants to stay with his great Uncle instead.

Of course the kid doesn't want to go home - he has been taken to Disney World, McDonalds, basketball games and given a Nintendo. The people of Miami have made Elian a political martyr for the displaced Cuban community; "Don't make Elian go back to Cuba, we want to give him a new life here."

This young, impressionable boy belongs with his father, plain and simple. The United States repeatedly says that they are not equipped to take the world's refugees but as soon as that refugee is from their political nemesis - Welcome Elian! Janet Reno is the only person in power that has recognized the underlying issue in this political debacle; this is not about Elian and whether or not he will have a better life in Miami, it is about the long-standing rivalry between the U.S. and Cuba.

Elian will have a better life with his father, away from the media circus. Sure he will probably never get to go to Disney World again but how presumptuous of the United States to think that all a child needs is Mickey Mouse. He needs his father, his friends and his community. This is not about democracy or freedom - it is about family.

If the Cuban community in Miami and the Federal Government want to fight over Cuban policies let them, but don't force this innocent child to become the embodiment of the fight. His extended family needs to stop exploiting him and, essentially, bribing him with Pokemon toys and the promise of the American dream. He has already lost his mother, at least give him his father.

No

By Ryan Delahanty

For the past few months, there has been controversy as to whether or not Elian Gonzalez, the diminutive 6-year-old Cuban boy, should be reunited with his father in Cuba. Remember that Elian took a raft from Cuba to Miami along with his mother, who did not survive the trip. For the past two or so months, he has been living with relatives and all the while his father has pleaded with the relatives and the international media to return the boy to him in Cuba.

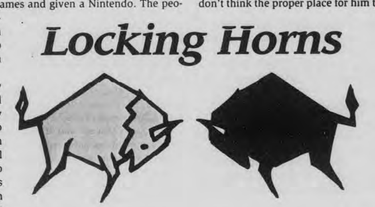
Recently, Elian's father came to the United States in order to get his son from his relatives, but even that situation didn't work out. Ultimately, the Elian belongs here, not in Cuba, and his father should be willing to accept that, and even stay here with the relatives.

I firmly believe that the young boy belongs with his father, but I don't think the proper place for him to grow up is in a Castro-led Cuba. He has many loving and supporting cousins, uncle, aunts, and grandparents that love him very much and will take good care of him. Why can't the father see this and come and live with his relatives? He maintains that his relatives are corrupting the boy, spoiling him with toys and trips to Disneyland and brainwashing him into saying that he doesn't want to return to Cuba.

If Elian Gonzalez or any other young child survived his mother's death and a voyage on a raft across an ocean, only to be rescued and pampered, then of course he wouldn't want to return to the place from which he departed.

I think the proper solution should be that Elian's father stay in the United States, having control of his son, but still remain in close proximity to the relatives that have treated him so kindly. So, he might be a little spoiled but after the ordeal he went through, which no child should ever have to endure, he deserves it. Elian's fate, no matter what the relatives seem to think by defying the federal government, lies in the hands of Attorney General Janet Reno.

The difficult decision of saying where and with whom Elian should live is up to her. However, it is my firm belief that the boy will benefit the most if he were to stay in the United States with his father, and if he were to be returned to Cuba, then that would be a shame.



Ample room for improvement in University room picking procedure

By David McGreevy

By the time you read this, if you are among the lucky ones, you may have already chosen a room for next fall and if so, you're probably really pleased.

If you're like most of us, though, there are still a few days until you get a chance at a room, and even then the odds of getting one you like aren't great. Indeed, some hundred or so current freshmen won't even have a room when they leave campus, and I know from my own experiences how that can be a pretty uncomfortable feeling.

It seems that the room selection process each spring is a stressful time for almost everyone. Clearly any system that produces so much wailing and gnashing of teeth can stand to be improved upon, but it can sometimes be hard to see places for improvement in a process like this one that has worked for so many years.

Luckily for all of us, I figured some of these things out last year, and I thought that maybe by getting the word out I could improve Bucknell's quality of life, or at least reduce some stress. So here goes:

The first thing to do is make all rooms available for block-booking. Under the current process, this would be problematic, because a group of students with a sufficiently low lottery number could block off a whole hall of desirable rooms, leaving others to live in broom closets. With other changes (discussed below), though, this wouldn't be a serious issue.

Additionally, based on the turnout for block-booking sessions, it appears that students really prefer to live in these larger groups, and the availability of more "blockable" rooms would simply make a lot of people happy.

As mentioned above, students involved in block-booking currently have a great advantage over other students with comparable selection numbers because they choose their rooms about a week earlier.

This situation is easily rectified, though. If students chose the members of their block before the selection process began, one random priority number could be assigned to the entire block (for example, number 24 might be held by a single student while a group of four others share number 37).

In much the same way, students planning to share a double would receive only one number between them, and likewise for triples. This would eliminate the substantial selection advantage enjoyed by block-bookers (who already have the advantage of living with their friends), giving all students equal access to good rooms.

Furthermore, since the members of the block would have already declared and registered themselves as a group, it would only be necessary for one member of the group to handle the actual selection, decreasing the size of the unruly mob that always forms when dorm rooms are being chosen.

Just a few simple adjustments like these might be able to prevent a lot of unhappiness and take some of the pressure off of the brave Residential Life employees who have to deal with all these angry college students.

There are, of course, a lot of other possibilities that go beyond what I've discussed here (the internet could certainly be useful), and you should also keep in mind that I don't have any particular authority on this subject.

Maybe somebody out there knows the perfect way to assign rooms to students. Maybe it's me; maybe it's you; more than likely it's whoever worked out the current procedure. Still, we all have a responsibility to try and keep things running as smoothly as possible, and I hope the things I've said here help work towards that goal.

OPINIONS

Money doesn't grow on trees, Mr. Bush

By Josh Guyan

On Tuesday George W. Bush announced the latest of his barrage of spending proposals, calling for $1.7 billion for low-income housing. Last week ended with the Governor calling for about $46 billion in new spending if he is elected. This included $13.4 billion for education, $4.3 billion for health services in remote and urban areas and $25 billion in increased defense spending.

On top of this Mr. Bush has encroached on Vice-President Gore's territory when it comes to the environment, calling for increased federal money to help states clean up "brownfields"— polluted and abandoned industrial sites. Also, don't forget the Bush $590 billion dollar tax cut. Does George W. Bush have any credibility on these programs? If so, where is all the money going to come from?

I have no reason to believe Mr. Bush won't implement the money he has suggested for low-income housing or even education. I'm happy to see him taking an interest in those issues. I know he'll spend more money on defense. There is certainly evidence that George W. Bush is breaking with his record in Texas that he keeps asking us to look at when it comes to health care and the environment.

During his tenure as governor, Bush had the money to improve health care, but chose not to. His record on the environment is abysmal. Emissions are up 11% since he took office making Texas the state with the dirtiest air in the nation. The League of Conservation Voters labeled Governor Bush the worst candidate on the environment in the primaries.

His position on environmental issues is also way off base. He called for a repeal on the gas tax, supports exploring the Alaskan Wildlife Refuge for oil, supports offshore drilling rights and opposes ratification of the Kyoto Agreement of 1997 which calls for reduced emissions to combat global warming.

On education I'm glad to see the Governor calling for more spending, but his call for $13.4 billion is weak compared to the $115 billion called for by Gore. Bush has said he wants to take the education issue away from the Democrats, but it's going to take a lot more than $13.4 billion for that.

Still I wonder, if he is serious about these important spending proposals, how he is going to pay for them. The Congressional Budget Office projects a total surplus of $247 billion from 2002 to 2006 if discretionary spending grows at the rate of inflation.

This also assumes the economy is still growing at current rates. That surplus wouldn't even cover half the Bush tax cut much less the increased domestic spending he has outlined.

So we have to ask ourselves, when push comes to shove which will George W. Bush actually choose, tax cuts or domestic spending? My guess is that he'll choose the tax cuts. Maybe he won't choose at all.

He has said he wants to follow in the footsteps of Ronald Reagan. Reagan didn't choose. He cut taxes and increased spending (mostly defense) and we ended up with a $3 trillion debt that the Clinton Administration and the Republican Congress is just now starting to pay down.

It is important that we continue with our balanced budget and increase our efforts at paying off the debt. George W. Bush's proposals simply aren't consistent with that. I realize Governor Bush wants to move back to the middle after the primary pushed him so far right and Gore is certainly after the middle as well, but the Bush proposals simply don't add up.

Body image stereoptypes have negative impact on students

By Dana Rofey and Mary Snyder

We are activists who want to see a very serious problem at Bucknell given much more attention than it is now while there is still hope to see things change. We see the unacceptably large number of women at Bucknell who are plagued with eating disorders, but an even larger number of women who are plagued with a distorted body image that results in their sacrificing their health, self-esteem and happiness in a quest for thinness.

Snyder:

When I was at Bucknell as an undergraduate, eating disorders and distorted body images existed, but when I was on campus again over ten years later as a graduate student, I was hearing and seeing that the problem of eating disorders and women's overly self-critical views of their bodies had worsened considerably. I had to do something.

I was feuled by the fact that I have a daughter who wants to go to Bucknell. When I became aware of the self-image problems on this campus, I wondered whether or not I would want my daughter to be exposed to this negativity.

The Women's Resource Center conducted a survey of Bucknell women students this past fall. The following question was asked on the survey: Regardless of your personal experience, what is your impression of the prevalence of eating disorders among students at Bucknell? 57.1% of the women students who responded to this survey answered that eating disorders are a very frequent occurrence on this campus.

I took this statistic to a Resident Assistant workshop that was held before the start of spring semester. Both women and men of each of the three groups I talked to expressed their concern with the issues of eating disorders on campus and with distorted body image. Many said that they felt the figure I quoted above sounded accurate based on what they'd observed among their friends and students on their halls.

During that workshop, I became even more dismayed with the problem on campus. One woman said she had been treated for a serious eating disorder and that she had relapsed when she came to Bucknell. Other women said that they experienced a respite from the pressure to be thin when they went abroad for a semester, but the pressure picked up again when they returned to Bucknell.

These same sentiments were expressed after the first film in a Film Series run by the Women's Resource Center. The RAs and the women at this film also clamored for more to be done increase student awareness beyond their first year. The problem continues beyond this point, but the awareness seems to fall away.

My intent is not to criticize the people who already work with the issue and problems of eating disorders on campus. I want to make others aware of how serious this problem is. More needs to be done.

I experienced anorexia myself in high school. For me, it was a feeling of wanting to be so in control that I was completely out of control. I wanted to be thin, like the supermodels. Then it turned into an obsession. I was lucky. Someone caught it in time and I got help.

Women sacrifice their health to be thin. They put themselves at risk for heart disease and cancer by not receiving the proper nutrients that their bodies need; this often begins happening at a very young age. Women believe they are worthless and unattractive when they can't "keep off the pounds." Many women are dissatisfied with themselves simply because of the body they were born with, and they struggle all their lives to change it.

This is the saddest part of all. I hear and read about so many women who will not accept themselves for whom they are. All they see is that they are not thin enough. This perception invades every aspect of their lives, inhibiting their ability to be competent, strong and healthy individuals who have respect for themselves and their bodies.

Rofey:

As a thirteen-year-old struggling with anorexia, I did not know where to turn. My parents' advice was "Just eat!"; my friends said, "You look great!"; my coach asked, "Where's your energy?" For the first time in my life, I did not have the answers and neither did my parents.

After eight months of counseling, though, I knew myself better than ever before. The process was by no means effortless but when it was complete I had learned about reality and self-truth.

Without having realized that it was to be my calling in life, I leveraged my situation by turning the same effort I put into my own health into others' health. Throughout the past eight years, I have counseled inpatient psychiatric adolescents and I have talked to a myriad of Bucknell students.

The hardest part about trying to help fellow collegians is the reverence that this campus has for thinness. I feel as though the average female considers the Twiggy-portrayed runway model as an idol, someone who she aspires to look like. It makes me cringe!

On a monthly basis, I give approximately ten to fifteen "talks" on the aforementioned topic. I share my own experience with others to make it known that it is okay to have disordered eating. Have you ever heard of a recovered alcoholic who isn't proud of the fact that he/she doesn't drink anyhore?

So why is this campus' stigma surrounding eating disorders so secretive? Is it because it's so "in to be thin" that people who eat normally are looked down upon?

While there are a plethora of people on this campus willing to help, I also see many turning their heads. For example, why is there a woman taking body fat indexes in the Terrace Room with the "stereotypical female" eating nearby?

As I leave Bucknell, I hope to return to a place where people exude their confidence not in their apparel, appearance or thinness, but in their intelligence, ambition and potential. Why waste so much time over-exercising and starving when there are an array of better things to be doing?

We both feel eating disorders are a very serious problem on campus that could easily grow to affect the lives of almost every woman who attends Bucknell. Is this what we want for members of our community? We both love Bucknell, we want our children to go here. We want our daughters to be happy when they go here, not feeling inferior because they're not thin enough.

We ask that more time and energy be devoted to this very severe yet insidious problem. Let's all work to encourage young women at Bucknell to have respect for their bodies, and for themselves, and spend the time that they've been wasting agonizing over their weight and manipulating their shapes just being happy and enjoying all the good things life has to offer.

Ready to commit?

Israeli Prime Minister may finally keep his promises

By Gretchen Schrock

This week began with another promise from Israeli Prime Minister, Ehud Barak, toward one of his adversaries in the land control war in the Middle East, the Palestinians. His declarations were intended to emphasize his increased attention to Palestinian peace negotiations, which is not the result of his concern for their condition but rather stalled Syrian peace talks leaving more time for the Palestinian issue.

On April 16, he said that he might give them immediate gains, which would recognize a Palestinian state and a "down payment" on a future land transfer, only after a "framework" final peace agreement is reached. He did not specify what areas would be given to the Palestinians as a "down payment," dodging criticism from Israeli citizens and making more promises to the Palestinians.

Mr. Barak publicly promised that Israel would not seek to annex the Arab villages near Jerusalem, ignoring the right wing's claim that this would endanger Jerusalem and the state of Israel.

"The annexation of those 50,000 to 70,000 Palestinians serves neither the security nor any other national interest of Israel," said Mr. Barak.

While the prime minister's intentions may seem sincere, the Palestinians are not gullible. Mr. Barak has broken promises before; what makes this time any different? Land control and the existence of a Palestinian state are still major issues that are preventing a sustainable peace. Mr. Barak will not forget them in the interest of progress. On January 16, the Israeli prime minister postponed a withdrawal from the West Bank, which would give Palestinians full or partial control over 40 percent. He attributed the delay to a lack of time to tend to the matter before heading to the United States. The fear of threatening Israeli security by relinquishing any territory was more likely the reason.

With numerous promises broken, the Palestinians dismissed these declarations as "trial balloons." They pointed out the important details that were lacking in Mr. Barak's statements: a readiness to withdraw from all of the West Bank, to dismantle Israeli settlements, and to acknowledge the Palestinian refugees' right to return. The declarations lacked commitment on the side of the Israeli government. "What we demand of the Israelis is to be committed to the deadlines," said Nabil Abu Rudeinch, an advisor to Yasir Arafat, the leader of the Palestinians.

The next land transfer, 10 percent of the West Bank, is scheduled for June. Mr. Barak insists that he intends to transfer the territory in a way give the Palestinians a continuous land mass over which they would possess sovereignty. The prime minister must have no qualms about abandoning his people because this method requires the desertion of some Jewish settlements. He believes that by disclosing all that he is willing to concede to the Palestinians he can nudge them out of a stalemate.

While the prime minister's intentions may seem sincere, the Palestinians are not gullible. Mr. Barak has broken promises before; what makes this time any different? Land control and the existence of a Palestinian state are still major issues that are preventing a sustainable peace. Mr. Barak will not forget them in the interest of progress. The prime minister must have no qualms about abandoning his people because this method requires the desertion of some Jewish settlements. He believes that by disclosing all that he is willing to concede to the Palestinians he can nudge them out of a stalemate.

Who is to blame for the past missed deadlines? It is the Israelis by refusing to hand over territory on time. If Barak wants to keep the peace process moving and one day secure permanent peace, he must deliver on every promise, allowing the creation of a Palestinian state. Without action, words will not produce the necessary outcome. Trust is necessary to proceed with any kind of negotiation. Therefore, Mr. Barak, act according to your words or peace will never be a reality.

Bucknell experience priceless but not perfect

Jared Silliker

This is sort of a second "capstone experience—"I've been accumulating a lot of thoughts for four years and have integrated them into this space. You will undoubtedly find this set of reflections on the negative end of the spectrum.

Don't get me wrong—I wouldn't change a thing about choosing Bucknell, but there are things that just irk me at times. Next week, however, I will close my collegiate journalism career in this space with more positive thoughts about my time in Lewisburg. Many of my pet peeves are, of course, minor details along the great path we call college.

But for now, onto things that drive me up the wall on this campus.

My first qualm is aimed at faculty-student interactions. When I enrolled at Bucknell, I was grabbed by the small school qualities such as a low student to faculty ratio. By all accounts, the faculty was very accessible and dedicated to developing close personal contact with students. I have never had difficulty in seeking personal academic help from professors.

My complaint enters outside the classroom. I guess I had visions of frequent invites to professors' houses and similar activities complementing our time spent behind desks. Bucknell professors certainly are not for a lack of busy schedules, but one would think in four years I would have run into some opportunities to socialize with faculty members. I fact, I've only received one such invite and that came freshman year through my residential college—thank you Professor Dauban. Of course, maybe I've just been unlucky. I have certainly heard of others making trips to faculty homes or entire departments having parties. Oh well.

Next, I can't stand the "Fort Knox" approach to locking Davis Gym. When I'm shooting alone in an empty gym, is there really a need to kick me out? This runs parallel to locking Davis Gym at all. It becomes essentially locked when the fieldhouse is locked at night. We don't have enough basketball facilities, yet there seems to be a need to lock the only hardwood floor on campus.

I understand some concerns that those without "proper" shoes will mark the floor, but this doesn't seem like a critical problem—kiddingly, I always argue with the custodians that I'm a "varsity-player-in-training" and that I am wearing proper sneakers. I can also understand the athletic departments at basketball powerhouses not wanting "peasant" players on sacred floors such as Cameron Indoor (Duke) or the Dean Dome (North Carolina). I also expect that these schools have plenty of other hardwood floors and good rims. I hope that my future visits to campus will find such facilities.

This leads nicely into a complaint about intramurals at Bucknell. I have determined that school size is definitely not a factor in the quality of intramural programs. I know plenty of schools—small and large—with programs that put ours to shame. Maybe student interest is to blame, but I doubt it; intramurals seem like an afterthought here. But fear not, sports fans, the "Plan to Reduce the Abuse of Alcohol" has called for a revamping of our intramural program. Seriously, how hard is it to have the basketball rims at proper height and not crooked for IM games?

Switching gears, I'm still amazed that University planners have had such a difficult time scheduling House Party in April for the past two years. Again, how hard is this? Sure, we have all kinds of "theme" weekends in the spring, but this has been the case for while. Not having House Party on "Admissions Weekend" is understandable but after that, who cares? Just put it at the end of April when it's always been. The weather cooperated this year, but come on—House Party in March is just an effort to discourage "crazy partying."

Okay, so we just renovated the Bison, but one point still remains—it's practically impossible to get a normal-sized meal on meal credit, especially for lunch. What's the point of using a "meal credit" when you've got to tack on some declining balance to actually purchase a "meal?" Why should you get less money to spend on lunch than dinner? Thanks to one of my newspaper colleague's research, it seems that having all declining balance is the only meal plan that is truly economical.

While we're talking about food and eating, let's move upstairs to the Terrace Room. I want to know, as a guy, why I get asked no less than seven times, "What are you doing here?" whenever I eat there. I of course know the answer to my own question, but I still find it quite amusing whenever I join my girlfriends in the famed TR.

My final thoughts will be brief:

I've never had a class outside. If my current professors are reading—please, just once before May 2.

There are no staplers in any computer lab on campus, and there is only one of these labs open all night long.

The rocks outside the Music & Art Building rank up there as one of the worst landscaping designs ever.

Schneider encourages social activism

Economics professor, P.U.L.S.E. advisor focused on increasing equality

By Katie Hays

His place as economics professor doesn't define him, but it reveals, in part, the focus of his energy. As professor of economics and faculty advisor for PULSE (the student group against sweatshops and corporate corruption), Geoff Schneider focuses more on the real, social implications of economics than on abstract mathematical theories. Since the fall of 1994, he has encouraged students to learn and to act on their thoughts.

Schneider's experience as an undergraduate at Northwestern University testifies to his current enthusiasm for teaching. There, he discovered his passion and acted on it.

"In my first semester, I took a class in economics that I liked and I've remained with the subject ever since," he recounted, "The social issues of economics interest me most; economics plays such an enormously important role in shaping people's lives. Really, the fundamental issue concerning any society is how it organizes its economy."

Schneider also glimpsed the power of peaceful protest during his undergraduate years. He and other students at Northwestern worked to end apartheid in South Africa; as a result, he dedicated himself to teaching the importance of social action in bringing positive change to a society's economy.

"I was an undergraduate from 1982 through 1986, which just happened to be the time of the anti-apartheid protests," Schneider said. "Many of the students campaigned for divestments, and the divestments from South Africa ultimately helped to end apartheid. The results of peaceful efforts show that nonviolent protests can catalyze incredible and great change."

Courtesy of www.facstaff.bucknell.edu

Professor Geoff Schneider pushes activism and encourages students to act on their thoughts.

Since his interest in economics was first piqued, Schneider has remained intrigued by the economic activity of Africa. "My research centers around Africa and South Africa. I wrote my dissertation on the subject, and my research since then continually returns to it," Schneider said.

Schneider has traveled to South Africa "on and off" over the years since; after some of his recent travels there, he wrote the journal article "Development of Manufacturing Sector in South Africa."

He details his thoughts on his travels and research as he candidly recalls, "South Africa is one of the most economically unequal countries on the planet. It is also, ironically, breathtakingly beautiful. Apartheid is gone, but the problems are not. The human cost of structural adjustment programs in Africa is astounding. Everywhere you look, you see evidence of inequality; the people who have money hire guards; they hide behind walls and high gates with spikes; they equip their cars with flame throwers. I see billionaires living next door to poverty-stricken people; both the people with money and the people without money live poorly. The rich live like prisoners and the poor struggle to survive. The United States' citizens should be aware of this; huge class gaps put countries in danger and create unstable situations."

Schneider not only researches the "unstable situation" of several African countries but through his affiliations with P.U.L.S.E. and its students, encourages action to ameliorate it. On the subject of P.U.L.S.E., he says, "We're working to make Bucknell sweatshop-free."

The pressure seems to be working; slowly, more companies in the area are diverting from sweatshop labor. Peaceful, nonviolent protest, as Schneider said, makes a great impact.

Along with associate professor of economics, Charles Sackrey, Schneider recently published a textbook, *Introduction to Political Economy*; most Bucknell students will read chapters from the new textbook in their upcoming economics courses. Schneider notes that he and Paul Susman, associate professor of geography, also work together on projects involving the Lewisburg community.

"Paul and I recently computed what the hourly living wage would be for a Lewisburg family with one working adult and one child to support. The minimum wage of $5.25 is not nearly enough for a small family with only one income," Schneider said. "The wage earner would need $9.00 an hour to support his/her family."

Investigating this side of the economy and its effects on people interests Schneider immensely. He added thoughtfully, "Next spring, I'm going to have my students complete projects similar to this one."

Schneider is not an "armchair" economist. He investigates, researches and contemplates his own findings; then, he acts. His words testify to those actions. "If enough people step up and say something, they have the power to change the world. My experience as an undergraduate taught me this. We do have power; there is enormous power in nonviolence." The steady focus of his eyes reiterates his conviction.

Schneider lives with his wife and two daughters, ages seven and nine. Besides spending time with his family, he also enjoys spending time with his students. "Teaching in general is a lot of fun. We [as professors] are constantly exploring new issues and relating them to people who, for the most part, want to learn. It is wonderful to see students get excited about ideas. Now, we discuss the stock market, the IMF, and the World Bank issues, and we realize that there is always something new and interesting going on. It's a wonderful field."

Schneider contributes much to the "wonderful field" of which he speaks; he contemplates the actions of people in a multiplicity of societies, contributes fresh thought to economic theory, and, most importantly, teaches his students to uphold their own thoughts, knowledge, and convictions ... and to act, peaceably, to support them.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

As I am sure you have noticed, tanning beds are becoming increasingly popular. A lot of people use them before going on vacation to prevent burning from new exposure to the sun. However, I have recently noticed that a lot of girls use tanning beds or tanning cream to keep the "I just came from the Bahamas look" year round. Normally I couldn't care less what these girls do, but recently this tanning phenomena hit somewhere close to home.

I have been dating this girl for a few months now; I really like her and we have a great relationship. When I first met her I noticed that she was very tan. She explained that it was because her family went on a cruise during break. In the ensuing months, however, I noticed that the tan hasn't faded. I asked some of her friends how she stayed tan for so long. Although it took a while to coax out an answer, I found out that she had bi-weekly tanning appointments and used tanning cream between appointments!

This appalled me. I know that people like to be tan, but isn't this kind of extreme? Is there any way I can subtly tell her that I know her tan is no longer natural and that I think tanning beds and creams are stupid? I don't want to jeopardize our relationship, but I feel as though I have to say something to her, if for nothing more than her own benefit.

Sincerely,

No Way It's Natural

Dear No Way It's Natural,

I am very familiar with the fake 'n bake tanning practices. Although there is no way that I would do it—the only way I tan is when my freckles grow together—I know a lot of people who have done it. While I can understand the desire to be tan to a degree, I also definitely understand why you have become sickened by the look.

Your main problem in sharing your feelings with your girlfriend is that she probably has no idea that she looks ridiculous. While it is nice to look tan, there are a couple of factors that your girlfriend probably doesn't realize.

The first issue is that, after fake'n baking, you don't look tan, you look orange. Normal people don't turn orange when they tan, so if you do, people know you go under the lamps or use lotion. The second issue is that people don't tan in the winter so if you don't think people realize that you look extra crispy when its snowing, you're wrong.

The easiest way to let your girlfriend know how you feel is to be completely honest. I know that looks aren't everything, but if it seriously bothers you, you should probably say something. It is very important, however, to not be confrontational.

Simply mention your concerns to her in a caring fashion. Keep in mind that your girlfriend may not understand the way you feel at first. It is essential that you express your concerns to her, whatever they may be. Some people talk about health issues associated with tanning beds, while others just think that there is no point in looking tan all the time.

In summation, if you want to look tan, go natural and take a trip, it will be well worth it in the long run. After all, as James Taylor says, "Oh Mexico, it sounds so simple I just got to go, the suns so hot I forgot to go home." Until next time relax, have fun and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. FLAG&B unites, strengthens alternative community on campus

By Helen Shen

On April 14, 2000, you may have seen students all over campus wearing jeans to support Jeans Day, an event in which Bucknellians may display their acceptance of gays, lesbians, and bisexuals in the community. Or maybe you heard about the amount raised at the Aids Walk in Williamsport on April 9, 2000 to support local AIDS work-over $1000. Perhaps you've attended the recent Poetry Slam at the Bison or been entertained by Ember Swift at The Seventh Street Café These events all have something in common: they were all hosted by the enthusiastic and optimistic group of students on campus that call themselves FLAG & B.

Friends of Lesbians and Gays and Bisexuals is "the reason the campus climate is changing", states the Lesbian/Gays/and Bisexuals Concerns advisor, Fran McDaniel. With over seventy active members, FLAG & B, a seven year-old organization, is making incredible strides in "the advancement of a more inclusive environment." A group that supports equal rights, FLAG & B consists of determined leaders who strive to change the level of awareness on Bucknell's campus.

The hard work has paid off. "The level of receptivity [on campus] has increased noticeably," states Megan Rancier, a junior. "I, for one, am always wanting to change other people's ideas about what's acceptable...it's become very personal."

Rancier is not the only student who devotes much of her time to the organization Kristen Erickson, a sophomore, explains that she was very attracted to the group from the beginning. "I love the fact that there was so much love in one room...it gave me better grounding in reality." Michael Collins, also a sophomore, attributes much of the group's success to the graduating seniors of FLAG & B. "I'm so glad they stuck it out here," he states. Erickson adds, "[Those seniors] fought the battle that no one wanted to fight." Collins agrees, "I continued being a member of FLAG & B because I saw that it was going somewhere."

"Going somewhere" may very well be an understatement when one looks at all of FLAG & B's accomplishments. "For anybody at Bucknell, it's hard to be different," suggests McDaniel. "The location of Bucknell plays a big part...there isn't as many places to go." Or perhaps the notoriously conservative Bucknellians attribute to the fact that this campus isn't exactly the easiest place to flaunt our diversity?

"Although this is a fairly conservative environment, once we all take a good look at each other, we'll see there's more similarity than there is difference," states McDaniel. She explains that while the Bucknellians do tend to be more conservative, that doesn't mean that students do not understand the concept of lesbian/gay/bisexual concerns. Cindy Peltier, advisor of FLAG & B, adds that Bucknell is a "microcosm of what's out in the world. She states, "We're all diverse. To separate people and put them in a box is absurd."

Which is exactly why FLAG & B work tirelessly to improve the Bucknell environment. FLAG & B not only sponsors and co-sponsors numerous events on campus, but they represent the Bucknell community outside of the community, too. On April 29, 2000, members of the group will participate in the Millennium March on Washington. Freedom to Marry Day, February 12, 2000, was also celebrated on campus.

FLAG & B's involvement in the community is key. "We need diversity all across campus, in every building," says McDaniel. "We need to make the community safe." Safe from what? The list goes on and on...threatening emails, phone threats, stares, negative attitudes, and the worst-ignorance. "It's the fear of the unknown," McDaniel suggests, that causes ignorance. However, optimism is definitely in the air. "You have to look through the positive end, or you get beat down," states Peltier. "Bucknell tries very hard to create a student body that is diverse...and the only way to do that is to celebrate who you are."

Indeed, the change that FLAG & B has initiated on campus through the years has been spectacular. With leaders such as David Carpenter, President of FLAG & B, and Ted Burnes, whose achievements have been acknowledged throughout the campus, the group is on the right path. "It might be rough getting there," suggests Collins, "but the conditions are definitely improving." Rancier jokes that the Lesbian/Gay/Bisexual Concerns office is getting "way too small", and that FLAG & B has become "much more visible" on campus. Erickson supplies, "The graduating seniors are the heart of this organization." Collins adds, "Ted has been my biggest inspiration."

"The power to make change is from students," states Peltier. "They exert the pressure to do the right thing. I always say to my students, 'You not only have the power, but you have the only power." McDaniel, who has just been honored with a new 20-hours-per-week position at the LGB office in Roberts Hall, adds, "We're moving on the diversity front. Achieving diversity is a process...it's always evolving and ever-changing. We must always keep it in the spotlight."

Indeed, FLAG & B has demonstrated the power of the student body. President Bro Adams once said, "Our interest in diversity must go beyond mere tolerance." Burnes' optimism is evident when he states, "Many students are helping Bucknell celebrate diversity, not just tolerate it." Is it possible to achieve complete awareness, to make Bucknell a safety zone for all students? Perhaps Burnes explains it best: "Sometimes, we fear what we don't understand; other times, however, we just don't try to understand." Maybe it's time we all tried a little harder to appreciate the diversity around us.

THE WINFIELD BAPTIST CHURCH
(founded in 1885)
Invites the men and women of Buck[nell] to worship and fellowship
SUNDAY SERVICES
Sunday School 9:15 a.m.
Morning Worship 10:15

An abroad perspective: Limerick, Ireland

Courtesy of Larissa Amy

Natural beauty abounds on the beach on Inis Mor on the Aran Islands

By Larissa Amy

It has been over a year since I boarded the flight to Ireland, but I remember exactly what was going through my head while flying over the Atlantic. I was looking forward to green countryside and people who talked like the leprechaun on the Lucky Charms commercials. I was expecting to blend in quietly and pick up the culture as I went along—boy, was I wrong!

The moment I stepped off the plane I was intensely aware of how much I had to learn in my four short months living in a foreign country.

Slowly, I started to figure things out. By the end of my three-day orientation in Dublin, I'd learned that when young people ask you, "Where's the crack?" they are not talking about hard drugs. They are talking about "craic," the Gaelic word for fun. Orientation also helped me realize the continuing impact Irish history and Gaelic heritage have on shaping who the Irish people are today.

Following our overwhelming stay in Dublin, the fourteen Americans in my program and I were bussed to the other side of the country (a whopping four-hour drive) to Castleisland, a tiny farm town on the West Coast. There we had a five-day homestay where we lived with families and were immersed into daily Irish life. The experience opened my eyes to how gracious and friendly the Irish people are.

After our homestay, we finally arrived at the third largest city in the Republic, the blue-collar city of Limerick. A short ride from the city center was our new home, the University of Limerick (UL), on the River Shannon. I moved my two suitcases into my student housing and met my housemates—two Irish guys, two Irish girls and another American. UL has a large international student population, so I was soon meeting people from Spain, France, Belgium and all over the world.

After a few weeks I was in the swing of things. I attended classes with Irish students and discovered what it really means to be in a British-style education system. We were expected to do most of our studies independently, and for most classes our only grade was the final at the end.

Campus activities were also a big part of student life. Like any large university, there were clubs and societies for everything, including a distinctive selection of Gaelic sports, most of which I never quite figured out. Especially impressive was the International Club, which integrated Irish and visiting international students by organizing trips and activities.

At the end of a long day of class and clubs, most students headed down to the campus pub for a pint. Contrary to popular stereotype, the Irish students were not heavy drinkers. People didn't go to pubs for the alcohol; they went because pubs were social places with good food and music.

On the weekends, most of the visiting Americans packed their "Let's Go!" tour books and headed to the local Bus Éireann station. Each county in Ireland has its own distinctive character so there was an abundance of sightseeing to do. These included the nearby student city of Galway, the Aran Islands, Blarney Castle, Cork and the famously scenic Ring of Kerry. Most of us also took longer trips to Dublin, Belfast and mainland Europe.

As the semester continued, I learned more and more about myself and where I fit into the world. I became especially conscious of what it meant to be American. It was a part of me that I couldn't hide—most Irish could pick an American out of any crowd even before they heard an accent.

Ireland and the United States have a long history so most Irish students had relatives in America and many students had also spent at least one summer working in the states. Because of this, the Irish conveyed a definite sense of camaraderie towards Americans.

More surprising to me was the sense of international community Europeans tended to have. World news was important to everyone, no matter their home country, so I was surprised at how much other people knew about my own and many other country's current events.

At the end of my four months abroad, I got on the plane to go home with more than just pictures and a few souvenirs. I came home with a new sense of independence and confidence, an expanded worldview, and, most importantly, some of the best friends and memories I have ever made.

A view of the misty Dingle Bay

Harlem Renaissance fostered African urbanism, creativity

By Rebecca Rowland

Although the official heyday of the Harlem Renaissance was from 1919-1929, the art, music and literature it produced are timeless. Although the seeds of the movement were germinating for a hundred years at least, it took an extraordinary set of circumstances to bring those seeds to bloom.

The years leading up to the Renaissance were ones of great change for African Americans. With emancipation many slaves turned to sharecropping as a way to make their living. It was a dead-end pursuit that left many Blacks in debt deeper than they could ever hope to recover from. Eventually the younger generations began to realize that, in order to take full advantage of their newfound freedom, a move North was necessary.

In what has come to be called "The Great Migration," hundreds upon [illegible]ds of Black people moved to Chicago, Philadelphia and New York City to pursue the American Dream. Armed with jobs in manufacturing and industry, the position of the Black man in America began to take a turn for the better. Many immigrants also came from Africa and the Caribbean, settling mainly in New York City. The epicenter of all change was Harlem.

"Black energy, thought and creativity was concentrated in Harlem," said Glyne Griffith, associate professor of English at the University and specialist in African American and Caribbean literature, as well as the Harlem Renaissance. "Black Americans began to see themselves in a positive light for the first time; they were able to rent apartments and get jobs and work to achieve the American Dream" Griffith said.

This was also the first time in American history that black people were able to explore their creative side. Artists like William Johnson and Hayden Palmer were commissioned through philanthropy money provided by wealthy White New Yorkers, to paint and sculpt. Musicians such as Cab Calloway and Count Bassey played to packed, and mostly white, crowds at The Cotton Club.

"After an evening at Carnegie Hall many whites came to Harlem for the 'late night'" entertainment," Griffith said. "They came to hear jazz."

While artists and musicians provided the backdrop and soundtrack to the Harlem Renaissance, it was the writers that gave it personality. Langston Hughes may be the most recognizable Harlem Renaissance writer to University students—thanks in no small part to Danny Glover's dramatic reading of several works by Hughes Monday night—he was only one voice of many.

W.E.B. DuBois and Alain Locke were both leaders of the black literature movement. DuBois especially embraced the Harlem Renaissance as a chance to debunk many racist myths.

"DuBois believed racism was the result of ignorance. By nurturing black artistic talent he hoped to educate Whites to the fact that Blacks were no different," Griffith said. "DuBois and Locke believed that if they could educate the 'Talented Tenth' of the black population—the middle class—than whites would see Blacks as capable of being their equals."

It was this elitist attitude of DuBois and Locke that didn't sit well with many other writers of the time, most notably Langston Hughes.

Hughes wrote for the common man. Many of his narratives were through the eyes of "Jess B. Simple," an average resident of Harlem, maybe not one of the "Talented Tenth." Hughes also was the first Harlem Renaissance writer to embrace his African roots.

"Hughes looked to pre-slavery Africa for his inspiration," Griffith said. "He was constantly trying to decipher what Africa meant to him, how he was connected to it and he tried to convey that connection in his writing."

DuBois and Locke soon followed suit and African roots played the role of inspiration in art and music as well. A noted Harlem Renaissance thinker by the name of Marcus Garvey advocated the complete transferal of the African American population back to Africa, thinking that the black man could never be free in America.

As with so many other movements of its time, the Harlem Renaissance was struck deeply by the Great Depression. White people no longer had the time to encourage black artists and, when it came time to evict tenants and fire employees, blacks were often the first to go.

"The Harlem Renaissance created a false sense of security in Blacks," Griffith said. "They felt they were independent and equal but, after the crash, they found out that they had not achieved all they felt they had."

This situation calls to mind a poem of Hughes' that Glover read in "An Evening with Martin and Langston," "What Happens to a Dream Deferred?"

"What happens to a dream deferred?" Hughes asked, "Does it dry up, like a raisin in the sun?" This became a very real concern for the blacks of Harlem.

The period following the Harlem Renaissance has been one of ups and downs for African-Americans. There were riots in the '30's and segregation in the '40's and '50's. But slowly blacks began to emerge again in powerful and inspirational roles.

Dr. Martin Luther King Jr., Malcolm X, the Black Panthers all emerged in the '60s to once again be the voice of a politically conscious and socially relevant generation of African Americans. "Black is Beautiful" became a slogan as Afros and Dashikis became fashion statements and movies like "*Shaft*" glorified the black life.

The assassinations of King and Malcolm X as well as the disbandment of the Black Panthers once again deferred the dreams of the blacks. But despite the apparent hopelessness, many important gains had been made. Civil Rights legislation passed and Affirmative Action opened doors for blacks that many thought could never be opened.

"Black history didn't start with the Harlem Renaissance," Griffith said. "From pre-slavery Africa to the present, African history has been connected and fluid. It is dialectic; it moves to and fro, not only in one direction."

The Harlem Renaissance's most profound contribution to the Black experience in America is that it facilitated urbanization.

"All of the feelings were there before but they were expressed in a rural setting," Griffith said. "The migration north made the African American experience urban—it gave it city-fied creativity."

As of now, the blacks of America stand, with the wisdom and experience of so many years of euphoria followed by so many years of hardship, ready to once again lunge forward at the American Dream.

"Blacks know that, while civil rights legislation and affirmative action were good, they did not eradicate racism," Griffith said. "They certainly provided blacks with the opportunity to live the American dream and create a middle class, but being middle class has not trumped being black. We need to look yet again at what needs to be done."

Concert Chorale gives semester performance

By Sarah Mastrony

The Bucknell University Concert Chorale presented a concert on Saturday, April 18 at 8:00 in the Weis Center. Under the direction of Professor of Music William Payn, the Concert Chorale spent the semester preparing works by a variety of different composers.

Joining the Chorale in concert were David Cover as the accompanist, Dick Adams on electric guitar, Chris Wheeland on the electric bass, and Jack Lawton on the drums.

The Concert Chorale performed a large selection of works. On the more classical side, they performed "Song of Peace," "Agnus Dei"and "I Celebrate Myself" all written by Vincent Persichetti.

The Chorale also performed "Lass Dich Nur Nicht Dauren," and "Wie Lieblich Sind Deine Wohnungen" by Brahms. The cycle of French songs by Lauridsen was beautiful, including "En Une Seule Fleur,""De Ton Reve Trop Plein," "La Rose Complete," and "Dirait-on."

The second half of the concert saw the music of Sondheim performed, some selections included "Being Alive," "Not a Day Goes By," "Johanna," "No One is Alone," and "A Parade in Town."

Chorale closed the concert with jazz, performing selections by Manhattan Transfer including "Java Jive," "Birdland," "Spice of Life," "Tuxedo Junction," and"ChooChoo Boogie."

Finally, the Chorale closed the concert with "River," "Stay" and "Way From My Door," an old favorite.

The Concert Chorale is a chorus of students from all over campus, from various fields of study at the University. The Chorale meets every Tuesday and Thursday evenings from 5:00 to 6:15 in the choral rehearsal room in the Weis Center.

Last year, the group was invited to sing at Carnegie Hall in New York City. This year, the sixty-voice choir participated in the "World Tree Concert" in October, and presented their Winter concert in November.

Channing amazes the Bison with E.S.P

By Meghan Magee

Do you think out loud? Even if you don't, mentalist Robert Channing probably could have read your thoughts during his Saturday night session in the Bison.

Channing, an esteemed mentalist who uses his improvisational comedic manner in conjunction with well-developed talents in E.S.P. and other mysteries of the mind, grasps the audience's attention in his astonishing performances. He conducts his sessions before corporate, collegiate, and theater audiences, exhibiting skill, humor, and respect.

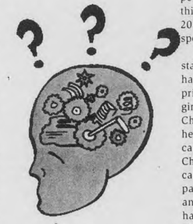
Channing takes the stage without the glamour and glitz commonly associated with magicians. In fact, he is quick to state that what he does is not magic at all.

On stage with him are a very simple podium-type fixture, a glass bowl, some adhesive tape, a pad and paper, and not much else. He immediately gains the audience's interest with even the first routine.

For this particular performance, Channing began by asking everyone in the audience who had change in their pockets to stand up. He randomly picked a young man from the audience and told him to take the change from his pocket without counting it. Channing then scribbled something down on a note pad and asked the person to count it. The total was 53 cents, which was the exact number Channing had written on the pad.

After some of his smaller routines, Channing asked two people to come up on stage and assist him while he blindfolded himself. This wasn't any ordinary blindfold; Channing taped two silver dollars, both examined by a volunteer, to his eyes, and proceeded to place even more duct tape over them. Finally, he used a regular blindfold on top of the silver dollars and tape.

This second part of the performance was even more intriguing than the initial routines. He asked the audience to write down on a small sheet of paper your funniest or most memorable experience, a number (perhaps social security or telephone), a question that you would like to ask him, and your nickname along with your full name—keep in mind that all of this went on while he was blindfolded. The audience gasped in amazement as Channing guessed social security numbers as if they were his own, named people's birth dates and other personal information, and recalled some pretty intimate stories and questions.



He apparently did this simply by rubbing the pieces of paper against the back of his blindfolded head.

After doing this, he would ask for so-and-so in the audience. That person then would stand up and he would recite information from the piece of paper.

One young lady stood up after he called her name and he knew that she wanted a particular male to sing "Take Me Home Tonight" to her. She blushed in amazement at his astounding mental powers.

One of the more amusing demonstrations was when he refused to name the person's name, but said that there was a young lady on the right side of the audience who wanted to know whether or not her boyfriend was cheating on her. His response was, "Why don't you quit cheating on him."

For the third and final part of the program, Channing took off the blindfold and asked everyone in the audience to think of their dream vacation, which entailed a location, a person to go along with you, the exact date and the exact amount of money to spend. He then picked four people from the audience, the first one saying that he wanted to vacation in Colorado, the second person wanted to take Mike, the third person wanted to go June 30, 2015, and the last person wanted to spend $7256.86.

Channing then called me up on stage along with another girl who had signed the seal of an envelope prior to the show's beginning. The girl testified that she had never met Channing before that evening. I held the sheet of paper with the vacation details written on them by Channing as the audience members called them out. The girl took the paper out of the sealed envelope and it was a letter that Channing had written the evening before on a plane ride from Miami, which correctly predicted each and every detail of the audience's dream vacation.

Maybe you had to see it to believe it, but I have a hard time thinking that anyone would doubt Channing's intriguing mental powers after his performance in the Bison.

"Not only was it the most amazing thing I've ever seen, but it was my favorite alternative social event in all of my four years," Steve Ward '00 said.

Saturday night proved to be an incredible night of skeletons coming out of the closet as well as other inconceivable demonstrations from the amazing mentalist, Robert Channing.

ALTERNATIVE ENTERTAINMENT

Events in our area you may not even be aware of!

By Katie Parker

ANTIQUES:

Shopping: Silver Moon Antique Mall, Rt. 15 North of LewisburgTedious at times because all the goods are scattered around on the shelves, but absolutely worth it for the hidden gems you can find (and prices are unbeatable). One suggestion: look at the art work on the walls as you come in. While shopping there I found an authentic Chinese print, probably worth$100-$200, for $35.

Artifacts on display: Slifer House Museum, RiverWoods, Lewisburg.

Two new elegant antiques (a 19th-C. British Rose teapot and Summertime Pitcher [circa 1870]) are on display, recently donated by Ray and Eileen Secrist of Glen Rock. Museum is open from 1 to 4 pm Tuesdays through Sundays, and is the former home of Col. Eli Slifer who was Secretary of theCommonwealth during the Civil War.

THEATRE:

"Grease": Community Arts Center, 220 West Fourth St., Williamsport

The fun, ageless musical "Grease", starring Laverne & Shirley's Cindy Williams and Eddie Mekka will hit the stage Thursday, June 8th at 7:30 pm.

For tickets, call (570) 326-2424 or (800) 432-9382. If you're hanging around this summer or live in the area, you don't want to miss this!

FAIRS:

23rd Annual Renaissance Jamboree: Downtown Bloomsburg (rain or shine).

This community fair, featuring arts & crafts, non-profit foods and game, booths, entertainment and rides (just to name a few) will be taking place Saturday April 29th from 10 am to 5 pm. Take a break from all that studying and act like a kid again!

FOOD:

BJ's Bar and Grill: Downtown Selinsgrove Boasting the area's best steak and ribs, BJ's is a quiet and pleasant dining experience with excellent food and friendly waiters. Stop by for a drink or for a nice long meal. Suggestion: If you're in a group (or if you just have a big appetite), try the Bonga-Bonga dip, it's fantastic!

DON'T MISS THESE UPCOMING EVENTS!!!

April 28th, all day: Arbor Day. Plan to plant a tree. In an upcoming issue we will give you more information on where and how to plant a tree, but don't miss out on this timeless tradition that is good for the environments well.

April 28th—May 1st: The 31st Annual Lewisburg Arts Festival. The whole town of Lewisburg will be transformed for this tradition, with arts & crafts booths up and down Market St. and events ranging from performances by local musicians to a pet parade for children and their pets. Pick up a schedule of events at the Bookseller's downtown, or just show up during these dates for a fun and welcome escape from exam week. Come out and support the local Arts Council and your local community of artists.

For any further information related to upcoming events in the Susquehanna Valley, or for help planning personal weekend excursions for the arts, email klparker@bucknell.edu.

Theatre students organize benefit concert

by Josh Cushner

Student Against Compulsive Licking Disorder (SACLD) is sponsoring a benefit concert in conjuction with the THEA 252 Sound Design Class this Friday Night (8-11pm) in The Harvey Powers Theater in Coleman Hall. SCALD is proud to bring two fantastic bands, a DJ and some off-the-wall performance by some of the most marginally talented Bucknellians we could find.

The two bands, The Mod Project, a spaced-out four-piece jazz ensemble play some of the best instrumental jazz Bucknell has produced in a while, and the Sid the Minkey Band is a four piece rock and percussion group, includes a Bucknell student, and have toured clubs for the last five years. Some very interesting performance will be included in the show. In fact there will be opportunities for any audience member to participate in the entertainment, so get your marginal talent in high gear. This should be a great show, and it is being put on for you by other Bucknell Students. So come out for the music and show help stamp out the threat that is destroying lives on all campuses across the nation.

SACLD is an unrecognized student group conceived in order to raise awareness for Compulsive Licking Disorder (CLD), a serious social disease that affects many.

Jazz Band performs final concert of year

By Jenny Johnson

The Bucknell University Jazz band performed under the direction of William Kenny on Wednesday April 12. The hour performance occurred at the Weis Center and included about eight pieces, among which were the popular "Theme from Sesame Street" and "Children of Sanchez."

The band also performed a Duke Ellington piece called "Across the Track Blues." "Engine No. 9 was a piece close to the heart of Kenny, as he said he performed it when he was in college. "It was an outstanding concert by a fine group of dedicated musicians," Kenny said. "I hope more and more people learn of this group's accomplishments. The jazz band deserves to be heard. I was particularly impressed with the musical energy of the group."

The group certainly was charged, especially considering it was the final performance for four seniors within the group. These seniors include saxophonist Fred Marotta, trumpeters Chris Cole and Joe Giammalvo and trombonist Nick Karkabe.

Art is good. Entertainment is better. Writing for A&E is just great. Call Jennie (74672).

22nd Annual Poetry Festival to take place

By Meghan Magee

This weekend marks the 22nd annual Bucknell Poetry Festival. Beginning in 1977, Karl Patten and Robert Love Taylor started this Bucknell tradition as a complement to the first issue of their magazine, *West Branch*. Patten and Taylor's motive for the festival was to bring in poets that were featured in their magazine and to meet the poets whose work they had admired. This idea proved to be a grand success, attracting people from the Bucknell community and as far as Philadelphia and Pittsburgh. Now, two decades later, Patten and Taylor celebrate their final year of involvement with the annual poetry festival, which could be the last one.

Former Professor of English, Karl Patton is one of the founders of the annual festival.

The poetry festival is free and open to the public and includes several readings from fourteen poets as well as various workshops and poetry discussions, all to be held in Bucknell Hall.

Profeesor of English, Robert Love Taylor encourages students to bring their own poetry to critique workshop during festival.

Robert Love Taylor encourages people, especially Bucknell students, to bring about 15 copies of their poem for an opportunity to undergo a sensitive critique during the workshops on Saturday.

Taylor also says that students should be particularly interested in the open reading, which promises inevitable interesting surprises.

This year's festival supplements the publication of the national literary magazine *(West Branch* 45/46), which will be the last issue under the editorship of Patten and Taylor.

Unique to this issue is a retrospective collection of fiction and poetry from the magazine's archive, a "Best of West Branch". Although the festival may not continue after this year, the magazine will continue under the editorship of Andrew Ciotola, Stadler Center intern Michael Carlin, and professors Joshua Harmon and Mark Svenvold.

Bucknell students as well as the Lewisburg community should take advantage of this long-standing tradition, not only because it may be the last, but also because it is an exceptional opportunity to meet talented poets or even have some of your own poetic talents observed and reviewed. Join the fourteen guest poets and many other gifted ones this Friday and Saturday in Bucknell Hall.

Dance Co. Spring Concert preview . . .

Courtesy of Department of Theatre and Dance

The Dance Company will give their spring performance on April 28 and 29 at 8:30 p.m. in the Weis Center. Danna Frangione and Kristy Kuh n '00 are pictured here and will be featured in the upcoming performances

By Nicole Gull

The Bucknell Dance Company is an essentially student run organization, supported by the Department of Theatre and Dance. Each year the company presents two concerts and showcases a wide array of talented dancers.

The Company has been working very hard on the upcoming concert and boasts five student-choreographed pieces. Sarah Wagner '01 has choreographed a piece entitled "33 1/3" that is rooted in the classic ballroom dancing, namely the Foxtrot, the Tango, and the Cha-Cha.

"I had a lot of fun with this piece and my dancers. I experimented by combining classic ballroom music with modern dance vocabulary and I love the parody that resulted," Wagner said.

Kristy Kuhn '00 and Steve Stasson's '02 up-beat modern and tap pieces present a nice contrast to Kimberly Nastasi's '00 piece which introduces the audience to a myth of two young lovers who explore the limits of human passions from love and desire to jealousy and hate.

The concert will also include a millennium piece entitled "Celebration," which is choreographed by dance professor Er-Dong Hu. BDC Public Relations Officer, Jennifer Schmermund '00 said the piece incorporates the techniques of traditional Chinese long ribbons. This will be complemented quite well with the work of guest artist, Trinette Singleton, entitled "Spirals"—an "impressionistic piece [that] illustrates the intricate beauties of the music with full, luxurious movement," Schmermund said.

The lighting for the show will be created by a second guest artist, Steven Draheim, while the costume design will be done by Professor Paula Davis Larson, Pam Miller, intern Amy Rinker, and costume TA Mary Kokie. Stage management for the show will be arranged by Rianna Romanowski, Allison Bagby, and David Carpenter.

In addition to the traditional alumni improv piece, Chrissy Carter '00 has been working on a "Senior Night," "a final thoughtful farewell to four years of dancing together at Bucknell," Schmermund said. The piece will include music from artists like G. Love and FatBoy Slim, highlighting the individual personalities of the company's graduating seniors.

The Concert will take place in the Weis Center for Performing Arts April 28 and 29, 2000 at 8:30 p.m. Tickets ($5) are on sale at the Weis Center Box Office.

For further information, please call the Department of Theatre and Dance at x71235.

Antigone Rising revisits alma mater

By Jennie Scheerer

Antigone Rising, an all-female band featuring played this past Saturday.

An interesting twist to Antigone Rising is that one of the members, Cathy, is a former Bucknell student. In 1988, Cathy's sophomore year at Bucknell, she met Penelope Kokines, then a freshman. They formed a band for the Greek Week battle of the bands. They performed "Wild Thing" and won the competition. Cathy's sister Kristen, who was still in high school,began road tripping up to Bucknell to join the band for weekend gigs. The band, then called "Mistress" had its first performance in the backyard of fraternity house Delta Upsilon during House Party weekend, 1988.

Courtesy of www.antigonerising.com

Antigone Rising has been named one of the top unsigned bands by Diskmakers Inc. The band also has peformed at last summer's Lilith Fair and opened up for bands such as Joan Jett and the Blackhearts.

"Mistress" played fraternity and sorority parties for free beer and dinner, and made the occasional trips to local bars in nearby Sunbury, and Union College in upstate NY.

This all female rock band has seen many changes. Sisters, Cathy (lead guitar) and Kristen Henderson (rhythm guitar/percussion) formed the band in 1993.

The current line-up includes long time bassist Teri Avella and drummer Dena Tauriello (both formerly of "Good Girls Don't"). The summer of 1999 marked the return of lead singer, Cassidy, who actually sang with the Henderson sisters just before Antigone Rising formed in 1993. Cassidy's return has marked an exciting new beginning for the band, adding a unique rock vocal style and attitude unmatched by anyone on the music scene today.

The past few years have yielded the band many honors, among them being named one of the top 10 unsigned bands by DiscMakers, Inc. Other highlights include 2 dates with Sarah Mclachlan and company during last summer's Lilith Fair, an opening slot with Joan Jett and The Blackhearts during the summer of '99, several performanes at NYC's prestigious Bottom Line (most noteably with Joe Jackson for a Kosova Benefit this past September), an appearance on The Today Show in NY, and national magazine ad for Techniques DVD.

Currently in the studio with producer, Tony Visconti (Bowie, Moody Blues, Thin Lizzy, Luscious Jackson), the NEW Antigone Rising will release a full length CD in early 2000. It will be available at CDNow, CDBaby, and all other major internet outlets through The Orchard.com.

Audiences flock to *American Beauty*

Courtesy of amazon.com

The acting Kevin Spacey and Annette Bening contribute a great deal to the film with their display of a troubled marriage within the American family.

By Krista Reisdorf

They say you can tell a good movie by the crowd. Well, judging by the masses packed into the seats (and aisles) of the LC forum, I predicted that this would be no ordinary, run-of-the-mill movie.

American Beauty tells the story of Lester Burnham, a forty-something loser who is ignored by his wife and loathed by his teenage daughter, all the while masquerading as the "perfect" American family. This family comes equipped with a white picket fence, a spotless house, and a shiny SUV.

Who could possibly ask for more? However, when Lester meets a friend of his daughter's, the beautiful and beguiling Angela, his way of life changes drastically. While lusting after Angela, Lester encounters a side of himself that he didn't think existed anymore - and he doesn't want to hide it.

"Phenomenal" is not a strong enough word to describe Kevin Spacey's performance as Lester Burnham. Every line is dripping with sardonic wit and caustic bite. Spacey knows Lester inside and out, and the transformation of character is so smooth and effortless. He moves from pathetic, to overpowering, to regretful, without skipping a beat. Annette Bening holds her own as Caroline Burnham, the stressed-out, too-perfect, slightly psychotic wife of Lester. Her off-beat character and many quirks that demonstrate her amazing acting ability.

Thora Birch plays Jane, the only child of Lester and Caroline. Birch pulls off the dark, brooding"I hate the world" attitude very well, shooting daggers at her parents and envying the beauty of Angela, while Jane herself feels like the ugly duckling.

Wes Bentley plays Ricky, the quiet and mysterious next-door neighbor who films everything in sight, and also admires Jane from afar. At times, his performance is creepy enough to make your skin crawl, but he is also the source of wisdom in much of the movie.

Last but not least, Mina Suvari plays the role of Angela. Her acting shows great range as she is self-centered, sexual, and slutty one minute, and a helpless little kid the next minute.

Overall, this movie is nothing less than spectacular. The audience never knows exactly how they should feel about each character. Conflicting emotions barrage both the characters and the audiences. But all the audience knows is that they like it. It's weird, but they like it. The movie is dark but hilarious, and definitely has deeper meaning. Some may say it's twisted and others will be disgusted, but for the majority of the people watching *American Beauty*, it is beyond compare. What other movie can make simple lines like "I rule" seem so brilliant? Hats off to "*American Beauty*, Kevin Spacey, and their matching Oscars.

Channing amazes the Bison with E.S.P

By Meghan Magee

Do you think out loud? Even if you don't, mentalist Robert Channing probably could have read your thoughts during his Saturday night session in the Bison.

Channing, an esteemed mentalist who uses his improvisational comedic manner in conjunction with well-developed talents in E.S.P. and other mysteries of the mind, grasps the audience's attention in his astonishing performances. He conducts his sessions before corporate, collegiate, and theater audiences, exhibiting skill, humor, and respect.

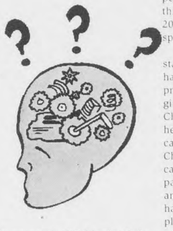
Channing takes the stage without the glamour and glitz commonly associated with magicians. In fact, he is quick to state that what he does is not magic at all.

On stage with him are a very simple podium-type fixture, a glass bowl, some adhesive tape, a pad and paper, and not much else. He immediately gains the audience's interest with even the first routine.

For this particular performance, Channing began by asking everyone in the audience who had change in their pockets to stand up. He randomly picked a young man from the audience and told him to take the change from his pocket without counting it. Channing then scribbled something down on a note pad and asked the person to count it. The total was 53 cents, which was the exact number Channing had written on the pad.

After some of his smaller routines, Channing asked two people to come up on stage and assist him while he blindfolded himself. This wasn't any ordinary blindfold; Channing taped two silver dollars, both examined by a volunteer, to his eyes, and proceeded to place even more duct tape over them. Finally, he used a regular blindfold on top of the silver dollars and tape.

This second part of the performance was even more intriguing than the initial routines. He asked the audience to write down on a small sheet of paper your funniest or most memorable experience, a number (perhaps social security or telephone), a question that you would like to ask him, and your nickname along with your full name—keep in mind that all of this went on while he was blindfolded. The audience gasped in amazement as Channing guessed social security numbers as if they were his own, named people's birth dates and other personal information, and recalled some pretty intimate stories and questions.



He apparently did this simply by rubbing the pieces of paper against the back of his blindfolded head.

After doing this, he would ask for so-and-so in the audience. That person then would stand up and he would recite information from the piece of paper.

One young lady stood up after he called her name and he knew that she wanted a particular male to sing "Take Me Home Tonight" to her. She blushed in amazement at his astounding mental powers.

One of the more amusing demonstrations was when he refused to name the person's name, but said that there was a young lady on the right side of the audience who wanted to know whether or not her boyfriend was cheating on her. His response was, "Why don't you quit cheating on him."

For the third and final part of the program, Channing took off the blindfold and asked everyone in the audience to think of their dream vacation, which entailed a location, a person to go along with you, the exact date and the exact amount of money to spend. He then picked four people from the audience, the first one saying that he wanted to vacation in Colorado, the second person wanted to take Mike, the third person wanted to go June 30, 2015, and the last person wanted to spend $7256.86.

Channing then called me up on stage along with another girl who had signed the seal of an envelope prior to the show's beginning. The girl testified that she had never met Channing before that evening. I held the sheet of paper with the vacation details written on them by Channing as the audience members called them out. The girl took the paper out of the sealed envelope and it was a letter that Channing had written the evening before on a plane ride from Miami, which correctly predicted each and every detail of the audience's dream vacation.

Maybe you had to see it to believe it, but I have a hard time thinking that anyone would doubt Channing's intriguing mental powers after his performance in the Bison.

"Not only was it the most amazing thing I've ever seen, but it was my favorite alternative social event in all of my four years," Steve Ward '00 said.

Saturday night proved to be an incredible night of skeletons coming out of the closet as well as other inconceivable demonstrations from the amazing mentalist, Robert Channing.

Artifacts on display: Slifer House Museum, RiverWoods, Lewisburg.

Two new elegant antiques (a 19th-C. British Rose teapot and Summertime Pitcher [circa 1870]) are on display, recently donated by Ray and Eileen Secrist of Glen Rock. Museum is open from 1 to 4 pm Tuesdays through Sundays, and is the former home of Col. Eli Slifer who was Secretary of theCommonwealth during the Civil War.

THEATRE:

"Grease": Community Arts Center, 220 West Fourth St., Williamsport

The fun, ageless musical "Grease", starring Laverne & Shirley's Cindy Williams and Eddie Mekka will hit the stage Thursday, June 8th at 7:30 pm.

For tickets, call (570) 326-2424 or (800) 432-9382. If you're hanging around this summer or live in the area, you don't want to miss this!

FAIRS:

23rd Annual Renaissance Jamboree: Downtown Bloomsburg (rain or shine).

This community fair, featuring arts & crafts, non-profit foods and game, booths, entertainment and rides (just to name a few) will be taking place Saturday April 29th from 10 am to 5 pm. Take a break from all that studying and act like a kid again!

FOOD:

BJ's Bar and Grill: Downtown Selinsgrove Boasting the area's best steak and ribs, BJ's is a quiet and pleasant dining experience with excellent food and friendly waiters. Stop by for a drink or for a nice long meal. Suggestion: If you're in a group (or if you just have a big appetite), try the Bonga-Bonga dip, it's fantastic!

DON'T MISS THESE UPCOMING EVENTS!!!

April 28th, all day: Arbor Day. Plan to plant a tree. In an upcoming issue we will give you more information on where and how to plant a tree, but don't miss out on this time-less tradition that is good for the environments well.

April 28th—May 1st: The 31st Annual Lewisburg Arts Festival. The whole town of Lewisburg will be transformed for this tradition, with arts & crafts booths up and down Market St. and events ranging from performances by local musicians to a pet parade for children and their pets. Pick up a schedule of events at the Bookseller's downtown, or just show up during these dates for a fun and welcome escape from exam week. Come out and support the local Arts Council and your local community of artists.

For any further information related to upcoming events in the Susquehanna Valley, or for help planning personal weekend excursions for the arts, email klparker@bucknell.edu.

Theatre students organize benefit concert

by Josh Cushner

Student Against Compulsive Licking Disorder (SACLD) is sponsoring a benefit concert in conjuction with the THEA 252 Sound Design Class this Friday Night (8-11pm) in The Harvey Powers Theater in Coleman Hall. SCALD is proud to bring two fantastic bands, a DJ and some off-the-wall performance by some of the most marginally talented Bucknellians we could find.

The two bands, The Mod Project, a spaced-out four-piece jazz ensemble play some of the best instrumental jazz Bucknell has produced in a while, and the Sid the Minkey Band is a four piece rock and percussion group, includes a Bucknell student, and have toured clubs for the last five years. Some very interesting performance will be included in the show. In fact there will be opportunities for any audience member to participate in the entertainment, so get your marginal talent in high gear. This should be a great show, and it is being put on for you by other Bucknell Students. So come out for the music and show help stamp out the threat that is destroying lives on all campuses across the nation.

SACLD is an unrecognized student group conceived in order to raise awareness for Compulsive Licking Disorder (CLD), a serious social disease that affects many.

Required reading for anyone who knows a kid.

Jazz Band performs final concert of year

By Jenny Johnson

The Bucknell University Jazz band performed under the direction of William Kenny on Wednesday April 12. The hour performance occurred at the Weis Center and included about eight pieces, among which were the popular "Theme from Sesame Street" and "Children of Sanchez."

The band also performed a Duke Ellington piece called "Across the Track Blues." "Engine No. 9 was a piece close to the heart of Kenny, as he said he performed it when he was in college. "It was an outstanding concert by a fine group of dedicated musicians," Kenny said. "I hope more and more people learn of this group's accomplishments. The jazz band deserves to be heard. I was particularly impressed with the musical energy of the group."

The group certainly was charged, especially considering it was the final performance for four seniors within the group. These seniors include saxophonist Fred Marotta, trumpeters Chris Cole and Joe Giammalvo and trombonist Nick Karkabe.

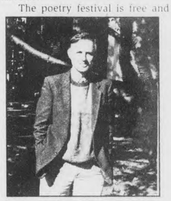
22nd Annual Poetry Festival to take place

By Meghan Magee

This weekend marks the 22nd annual Bucknell Poetry Festival. Beginning in 1977, Karl Patten and Robert Love Taylor started this Bucknell tradition as a complement to the first issue of their magazine, *West Branch*. Patten and Taylor's motive for the festival was to bring in poets that were featured in their magazine and to meet the poets whose work they had admired. This idea proved to be a grand success, attracting people from the Bucknell community and as far as Philadelphia and Pittsburgh. Now, two decades later, Patten and Taylor celebrate their final year of involvement with the annual poetry festival, which could be the last one.

Former Professor of English, Karl Patton is one of the founders of the annual festival.

The poetry festival is free and open to the public and includes several readings from fourteen poets as well as various workshops and poetry discussions, all to be held in Bucknell Hall.



Professor of English, Robert Love Taylor encourages students to bring their own poetry to critique workshop during festival.

Robert Love Taylor [illegible] people, especially Bucknell students, to bring about 15 copies of their poem for an opportunity to undergo a sensitive critique during the workshops on Saturday.

Taylor also says that students should be particularly interested in the open reading, which promises inevitable interesting surprises.

This year's festival supplements the publication of the national literary magazine (*West Branch* 45/46), which will be the last issue under the editorship of Patten and Taylor.

Unique to this issue is a retrospective collection of fiction and poetry from the magazine's archive, a "Best of West Branch". Although the festival may not continue after this year, the magazine will continue under the editorship of Andrew Ciotola, Stadler Center intern Michael Carlin, and professors Joshua Harmon and Mark Svenvold.

Bucknell students as well as the Lewisburg community should take advantage of this long-standing tradition, not only because it may be the last, but also because it is an exceptional opportunity to meet talented poets or even have some of your own poetic talents observed and reviewed. Join the fourteen guest poets and many other gifted ones this Friday and Saturday in Bucknell Hall.

Dance Co. Spring Concert preview . . .

Courtesy of Department of Theatre and Dance

The Dance Company will give their spring performance on April 28 and 29 at 8:30 p.m. in the Weis Center. Danna Frangione and Kristy Kuh n '00 are pictured here and will be featured in the upcoming performances

By Nicole Gull

The Bucknell Dance Company is an essentially student run organization, supported by the Department of Theatre and Dance. Each year the company presents two concerts and showcases a wide array of talented dancers.

The Company has been working very hard on the upcoming concert and boasts five student-choreographed pieces. Sarah Wagner '01 has choreographed a piece entitled "33 1/3" that is rooted in the classic ballroom dancing, namely the Foxtrot, the Tango, and the Cha-Cha.

"I had a lot of fun with this piece and my dancers. I experimented by combining classic ballroom music with modern dance vocabulary and I love the parody that resulted," Wagner said.

Kristy Kuhn '00 and Steve Stasson's '02 up-beat modern and tap pieces present a nice contrast to Kimberly Nastasi's '00 piece which introduces the audience to a myth of two young lovers who explore the limits of human passions from love and desire to jealousy and woe.

The concert will also include a millennium piece entitled "Celebration," which is choreographed by dance professor Er-Dong Hu. BDC Public Relations Officer, Jennifer Schmermund '00 said the piece incorporates the techniques of traditional Chinese long ribbons. This will be complemented quite well with the work of guest artist, Trinette Singleton, entitled "Spirals"—an "impressionistic piece [that] illustrates the intricate beauties of the music with full, luxurious movement," Schmermund said.

The lighting for the show will be created by a second guest artist, Steven Draheim, while the costume design will be done by Professor Paula Davis-Larson, Pam Miller, intern Amy Rinker, and costume TA Mary Kokie. Stage management for the show will be arranged by Rianna Romanowski, Allison Bagby, and David Carpenter.

In addition to the traditional alumni improv piece, Chrissy Carter '00 has been working on a "Senior Night," "a final thoughtful farewell to four years of dancing together at Bucknell," Schmermund said. The piece will include music from artists like G. Love and FatBoy Slim, highlighting the individual personalities of the company's graduating seniors.

The Concert will take place in the Weis Center for Performing Arts April 28 and 29, 2000 at 8:30 p.m. Tickets ($5) are on sale at the Weis Center Box Office.

For further information, please call the Department of Theatre and Dance at x71235.

Antigone Rising revisits alma mater

By Jennie Scheerer

Antigone Rising, an all-female band featuring played this past Saturday.

An interesting twist to Antigone Rising is that one of the members, Cathy, is a former Bucknell student. In 1988, Cathy's sophomore year at Bucknell, she met Penelope Kokines, then a freshman. They formed a band for the Greek Week battle of the bands. They performed "Wild Thing" and won the competition. Cathy's sister Kristen, who was still in high school began road tripping up to Bucknell to join the band for weekend gigs. The band, then called "Mistress" had its first performance in the backyard of fraternity house Delta Upsilon during House Party weekend, 1988.

Courtesy of www.antigonerising.com

Antigone Rising has been named one of the top unsigned bands by Diskmakers Inc. The band also has peformed at last summer's Lilith Fair and opened up for bands such as Joan Jett and the Blackhearts.

"Mistress" played fraternity and sorority parties for free beer and dinner, and made the occasional trips to local bars in nearby Sunbury, and Union College in upstate NY.

This all female rock band has seen many changes. Sisters, Cathy (lead guitar) and Kristen Henderson (rhythm guitar/percussion) formed the band in 1993.

The current line-up includes long time bassist Teri Avella and drummer Dena Tauriello (both formerly of "Good Girls Don't"). The summer of 1999 marked the return of lead singer, Cassidy, who actually sang with the Henderson sisters just before Antigone Rising formed in 1993. Cassidy's return has marked an exciting new beginning for the band, adding a unique rock vocal style and attitude unmatched by anyone on the music scene today.

The past few years have yielded the band many honors, among them being named one of the top 10 unsigned bands by DiscMakers, Inc. Other highlights include 2 dates with Sarah Mclachlan and company during last summer's Lilith Fair, an opening slot with Joan Jett and The Blackhearts during the summer of '99, several performanes at NYC's prestigious Bottom Line (most noteably with Joe Jackson for a Kosova Benefit this past September), an appearance on The Today Show in NY, and national magazine ad for Techniques DVD.

Currently in the studio with producer, Tony Visconti (Bowie, Moody Blues, Thin Lizzy, Luscious Jackson), the NEW Antigone Rising will release a full length CD in early 2000. It will be available at CDNow, CDBaby, and all other major internet outlets through The Orchard.com.

Audiences flock to *American Beauty*

Courtesy of amazon.com

The acting Kevin Spacey and Annette Bening contribute a great deal to the film with their display of a troubled marriage within the American family.

By Krista Reisdorf

They say you can tell a good movie by the crowd. Well, judging by the masses packed into the seats (and aisles) of the LC forum, I predicted that this would be no ordinary, run-of-the-mill movie.

American Beauty tells the story of Lester Burnham, a forty-something loser who is ignored by his wife and loathed by his teenage daughter, all the while masquerading as the "perfect" American family. This family comes equipped with a white picket fence, a spotless house, and a shiny SUV.

Who could possibly ask for more? However, when Lester meets a friend of his daughter's, the beautiful and beguiling Angela, his way of life changes drastically. While lusting after Angela, Lester encounters a side of himself that he didn't think existed anymore - and he doesn't want to hide it.

"Phenomenal" is not a strong enough word to describe Kevin Spacey's performance as Lester Burnham. Every line is dripping with sardonic wit and caustic bite. Spacey knows Lester inside and out, and the transformation of character is so smooth and effortless. He moves from pathetic, to overpowering, to regretful, without skipping a beat. Annette Bening holds her own as Caroline Burnham, the stressed-out, too-perfect, slightly psychotic wife of Lester. Her off-beat character and many quirks that demonstrate her amazing acting ability.

Thora Birch plays Jane, the only child of Lester and Caroline. Birch pulls off the dark, brooding-"I hate the world" attitude very well, shooting daggers at her parents and envying the beauty of Angela, while Jane herself feels like the ugly duckling.

Wes Bentley plays Ricky, the quiet and mysterious next-door neighbor who films everything in sight, and also admires Jane from afar. At times, his performance is creepy enough to make your skin crawl, but he is also the source of wisdom in much of the movie.

Last but not least, Mina Suvari plays the role of Angela. Her acting shows great range as she is self-centered, sexual, and slutty one minute, and a helpless little kid the next minute.

Overall, this movie is nothing less than spectacular. The audience never knows exactly how they should feel about each character. Conflicting emotions barrage both the characters and the audiences. But all the audience knows is that they like it. It's weird, but they like it. The movie is dark but hilarious, and definitely has deeper meaning. Some may say it's twisted and others will be disgusted, but for the majority of the people watching *American Beauty*, it is beyond compare. What other movie can make simple lines like "I rule" seem so brilliant? Hats off to "*American Beauty*, Kevin Spacey, and their matching Oscars.

SCIENCE & TECHNOLOGY

Canada falls short with animal protection laws

By Alex Piel

As the movement grows to protect the wildlife of the earth, countries that used to ignore such issues are beginning to write and enforce laws for the preservation of endangered species. Reuters reports that Canada recently joined so many other countries in recognizing that non—human life is not the only life that deserves protection by proposing its first-ever bill written to protect endangered species from extinction.

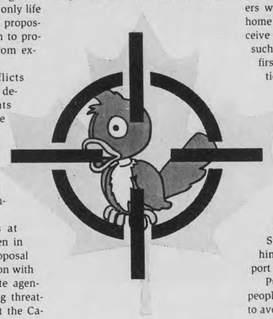
The law not only inflicts fines on those damaging or destroying uncommon plants and animals, but also the possibility of extended prison sentences depending on the extent of the damage. Though welcomed initially, this bill has gradually drawn criticism from environmental groups.

Termed the "Species at Risk Act," the bill has been in process since 1992. The proposal hopes to work in cooperation with both farmers and corporate agencies in hopes of preserving threatened territories throughout the Canadian provinces.

David Anderson, Environment Minister for Canada, designed the proposal but his critics argue that the legislation, though novel and beneficial in many ways, is insufficient—especially considering the danger already posed to the targeted environments.

More specifically, many environmental groups were concerned that cabinet politicians, and not environmental scientists, would decide what plants and animals would be marked as "endangered."

A group of scientists are gathering to assess the different species *they* think should be included on the



list. That list will be presented to the governing body later this month.

Whether his critics agree with his motivations or not, Anderson has reason to enact such a bill. Of 70,000 plants and animal species in Canada, over 350 are known to be endangered today including the famed beluga whale and white pelican. Still other species are very close to being considered endangered.

Anderson's plan, however, does not only penalize those that contribute to the elimination of such species but also compensates those that protect it. For example, land owners who maintain property that is home to endangered species will receive payment for the protection of such plants or animals. This is the first type of financial compensation of its kind.

One of the reasons conservation propositions have failed in other countries is that Westerners tend to neglect the needs and culture of the native people. Anderson understands that protecting these species requires both the commitment of the government and the landowners. Such an appreciation has earned him what is most needed—support from both sides.

Punishments are harsh and some people are already taking action as to avoid such involvement. Companies found guilty of violating the newly passed law can face fines up to $1 million while individuals can spend up to five years in prison and $250,000 in fines.

Even with such seemingly extensive fines and other penalties, local environmental groups were disappointed with the overall presentation of the regulations.

Sarah Dover, director of the Canadian Endangered Species Campaign, accuses the administrators and politicians of acting without proper authority. Claiming that the decision-makers are neglecting too many species, Dover cites Quebec as a prime example of such hypocrisy.

In Quebec, scientists have named over 450 species as endangered, yet the Canadian government has selected fewer than 25 to be on the official list of protected species.

After trying to play mediator between conservation groups and landowners, Anderson believes there is more to this than first appears. He argues that the government has to consider and weigh the views of landowners and others who might be affected by the placing of a species on the endangered list.

"It isn't as simple as first thought. Protecting everything in sight is self-defeating, since farm owners' interests are almost more important than environmental groups' interests," Dover said.

The more severe these proposed laws are, the more they risk a "shoot, shovel, and shut-up" retaliation from landowners.

Unfortunately, people have been known to actually search for any endangered species and get rid of them just to avoid potential problems with lawmakers and activists.

In trying to accommodate the recommendations of the local scientists, Anderson agreed that their suggestions of what animals should go on the list would be highly considered in making any final decisions. He reaffirmed that their views and words would be recorded and carefully measured, but that is doubtful all of the species will be special awarded protection.

Holodiscs on the horizon

New breakthroughs in the third dimension of data storage

By Matthew Trunnell

Every kid remembers playing with neat hologram stickers of dinosaurs, action figures or more recently, Pokemon cards. Now researchers are moving hologram technology out of the toy store and into your computer.

Holograms will soon be used to store all types of data in your computer, from full—length movies and digital pictures to digital music.

The benefit of using holographic techniques is the unthinkably large amount of data that can be stored on a single disc.

According to *New Scientist Magazine*, Minnesota—based optical storage company Imation has plans for a disc that can hold seven times as much data as a DVD—nearly 125 gigabytes.

That's seven DVD-quality movies on a single disc.

Bayer, another company developing the technology, has announced a method of using liquid crystal displays to construct "data pages" on holographic discs.

Bayer claims its approach will yield a disc with a capacity of 1000 gigabyte—1 terabyte—by 2004.

Imation's process uses existing equipment to make holographic recorders, similar to CD-ROM recorders, which they project to sell by 2002.

This technology employs micro-mirror arrays originally intended to drive digital projectors. A gas laser beam is projected through a half-silvered mirror, splitting into a reference beam and a data beam.

As the data beam travels through the micro-mirror array, only part of the light passes through. Millions of the tiny mirrors pivot to either reflect or let pass a portion of the laser.

When the reference beam and the processed data beam recombine on the disc, at different angles, a "bit-mapped" page of data is permanently burned onto the surface.

Besides the groundbreaking increase in capacity, transfer times should also increase dramatically. Current technology used in CDs and DVDs reads and writes data one bit at a time, resulting in increased time and space requirements.

With holographic technology, however, entire "images" of data can be read—on different layers of the hologram—at once.

Imation predicts this will increase transfer rates to 1 gigabit per second, which is more than 25 times as fast as current DVDs.

Moore's Law predicts that computer processors, like the Intel Pentium series, will double in speed every 18 months. In contrast, storage drives have historically lagged behind this exponential growth curve, both in terms of capacity and speediness.

Holographic storage is the answer. There are not yet many applications that require hundreds of gigabytes of data. But the promise of on-demand digital movies and music brings exponential increases in storage needs—and holographic discs will be the medium of choice.

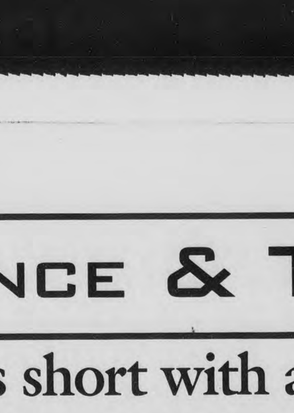
Campus celebrates Earth Week

EARTH from page 1

the "Tent-in" held on the Academic Quad on Wednesday in which students could camp out all day and night on the Quad to help defend the Allegheny Forest.

Also on Wednesday's schedule was Professor John Grim of the religion department with his Native Story Telling session. According to Grim he told "3 stories that have environmental implications." The first one was a story from his own family background entitled "A Vision of My Father at My Death." The second story called "When the Two Went to Their Father was from the Navajo/Dineh peoples and the third story was from the Salish Kettle Falls people.

Some students participated in protests over this past weekend. The PULSE organization also protested global capitalism and sweatshop labor at the Selinsgrove Wal-Mart. Approximately 20 students even made the trip to Washington D.C. this past weekend in order to take place in a non-violent protest against the World Bank and International Monetary Fund. "Earth Week is a good opportunity for activist groups to come together to promote social justice and environmental responsibility," feels McCaffrey.



Dan Blair—The Bucknellian

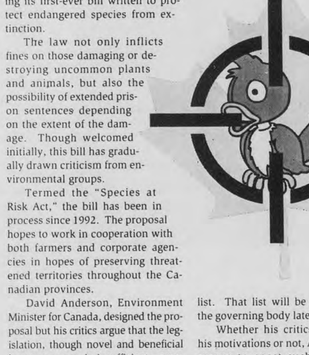
Left: Student groups educate the people at the Earth Day fair.

Bottom Left: Clyde Peeling of Reptiland speaks to the crowd.



Dan Blair—The Bucknellian

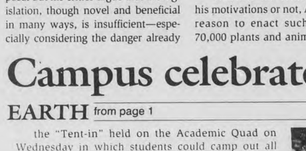


Photo courtesy of Mike McCaffrey

Sunday April 20 culminates Earth Week, as the Bucknell Community is invited to an animal-free meal. This vegan will consist of wilted spinach and portabella mushroom salad along with pasta primavera and dessert. Jeannette Lasansky from the Merrill Linn Conservancy will also be speaking after the dinner.

One interesting note, all the flyers distributed regarding Earth Week festivities were from recycled paper found in the Bucknell mailroom.

Molly Maffe '00, a member of the planning committee, eagerly supports the impact Earth Day can play. "The Earth Day activities are planned in the intent to bring awareness, information, education to the Bucknell campus and the surrounding community. Most of all our aim is to make our activities enjoyable and entertaining so that we are able to demonstrate how saving our surrounding environment does not have to be a chore- that is actually becomes fun!!"

SCIENCE EDITORIAL

Abnormal weather brings mayhem to US, campus

There's one thing that I have realized over the last several months here at Bucknell University. When it starts to rain—and I mean really rain—I can always find a parking space behind Hunt Hall.

With the thoughts of September's flood on campus still residing in the back of everyone's mind, no one is willing to risk losing their possessions again.

However, according to MSNBC.com, the trend of more severe weather is not going to end.

Only four months into the year, 2000 is breaking records for extreme weather conditions.

This past Tuesday, California was hit with extreme conditions including tornado force winds and torrential rains.

Even at University, we have had the weather change at incredulous rates. Do you remember two weekends ago, when at 10 a.m. it was 70 degrees, but by 10 p.m. we had snow?

And this type of inconsistent weather does not look to settle any time soon according to experts.

"We're going to see more extreme events, we're going to see more droughts, we're going to see storms with more water in them, we'll see both rainfall and droughts," said James Baker, the director of the National Oceanographic and Atmospheric Administration.

And we have global warming to blame. But why should the rise in temperature cause more storms?

With warmer temperatures, the soil becomes parched and the result is an increase in droughts. But the water has to go somewhere.

The water evaporates into the atmosphere, causing more clouds, and an increase in heavier rain.

So next time you look out the window and see sun, you might be wise to bring your umbrella with you. You never know when torrential rain might hit. And while you're at it, why don't you move you car—I could use the parking space.

"Honest mistake" costs men's golf title

Error in Nick Leibowitz's scorecard disqualifies his par round, costing team Patriot League crown and golfer individual crown

By Carmen Mauriello

Bucknell men's golf coach Tommy Thompson said before hosting last weekend's Patriot League Championships that he'd be pleased if his Bison finished in fourth place. So why are he and his golfers disappointed with their second-place showing—the best-ever in school history?

Because they won.

An error in sophomore Nick Leibowitz's second round scorecard disqualified his score and cost the Bison 11 strokes, heisting the trophies from would-be individual champion Leibowitz and the would-be Patriot League champion Bison.

"After it was over, Navy coach Pat Owen, came up to me and said, 'Tom, this is really tainted the way it turned out. Your team played better than our team.'"
*— head coach **Tommy Thompson***

To understand the situation, the meet's scoring procedure must be explained. The golfers were paired up with a competitor from a different team for their rounds. In order to ensure honest scoring, each player records the scores of the other, but players keep their individual scores as well to verify the results.

After each round, the player checks the hole-by-hole scores he recorded against the numbers that his competitor totaled, and signs and turns in the sheet to the officials if the numbers are consistent. If there are any discrepencies, the player must not sign the scorecard but bring the problem to the attention of an official.

Given this, the controversy at the Bucknell Country Club began on the back nine of Sunday's second round. Leibowitz shot an outstanding 33 on the back nine, giving him a par-70 for the round. He checked and signed his scorecard before rushing out to play the third round.

But the officials uncovered an inconsistency. On the par-four fourteenth hole, Leibowitz's Army partner incorrectly credited him with a two on the hole, while Leibowitz correctly registered a three on his scorecard.

Although players are instructed to compare the scores on a hole-by-hole basis, Leibowitz may have overlooked this discrepency because both he and the Army player had the same total of 33 for his score on the back nine. This was because the Army player incorrectly summed Leibowitz's scores, which should have totaled a 32, given his mistake on the 14th hole.

Unfortunately for Leibowitz and the Bison, the USGA rules which govern NCAA competition don't penalize at all for incorrect summing, but they harshly penalize a player for signing for a score lower than what he actually shot.

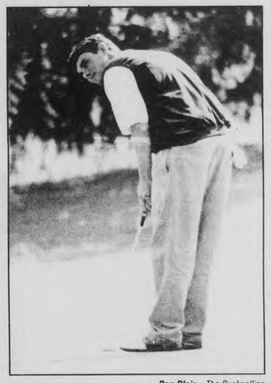
Leibowitz's par-70 round was disqualified, and the Bison were forced to take their next lowest score in the six-play, four-score format—freshman Nick Perini's 81. This 11-stroke swing shrunk the Bison's lead heading into the tournament's final round from a virtually insurmountable 19 strokes to eight. Navy gained 11 strokes over the Bison in the final round by posting a 299 to Bucknell's 310, giving the Midshipmen the championship by three strokes.

Ironically, if the mistake that Leibowitz signed for gave him a four on the 14th instead of a two, the Bison would have been hoisting the championship trophy, as signing for a score higher than what you actually shot does not result in disqualification. The only penalty is that the player must take the higher score that he agreed to, and the Bison gladly would've accepted losing a stroke instead of 11.

"It was a completely honest mistake," team captain Ken Kosteva said. "It was a combination of Nick being a little bit lazy and the things that happen when you're not paying complete attention. Plus, he had to jump right out to another round, when we normally have 15 minutes to look over the scorecards."

What can't be overlooked is how well Leibowitz played over the weekend. His two-under, 68 score in the first round made him the first pupil of Thompson, the Bison's 19-year coach, to break 70 at the Bucknell Country Club. If his second-round 70 was counted, Leibowitz would have finished the tournament with a 215, which would have given him the tournament championship by three strokes over eventual winner Joel Amquist of Navy.

"Nick outplayed everyone is the tournament and deserved [the championship]," Kosteva said. "I'm more disappointed that Nick didn't win the individual title than I am about us not winning the team title."



Dan Blair—The Bucknellian

Ken Kosteva '01 gained All-Patriot League honors.

Kosteva's performance was also outstanding, as he shot a 220 to finish in second place overall and earn All-Patriot League honors (which are awarded to the top 10 finishers). He was just two strokes behind Amquist for tournament champion.

"I was happy with the way I played since getting All-Patriot League honors was one of my goals for the spring," Kosteva said, "but I would've been a hell of a lot happier with a third-place finish, Nick finishing first and us winning the team title."

But Kosteva stressed that it was a "complete honest mistake that could've happened to anyone," and that the team, in no way, holds any ill feelings against Leibowitz.

Thompson stated that the mistake cannot be attributed to the fact that he was forced to run the tournament himself because the course currently lacks a golf pro—which was the subject of a feature story in the *Daily Item* last week. He said that the absence of computers in tallying the results wasn't a problem since only 42 golfers competed in the event, and that manual scoring is the policy at almost all college tournaments.

"The tournament ran smoothly," Thompson said. "I had help from the Patriot League office. Everyone enjoyed our golf course."

Thompson also couldn't say enough about how proud he was of his golfers' performance. "They were pointed and focused and really put it all together," Thompson said.

"Everyone knew who was the best team out there," Thompson said. "After it was over, Navy coach Pat Owen came up to me and said, 'Tom, this is really tainted the way it turned out. Your team played better than our team.'"

This wrongly marks the end of the '00 spring season for the Bison, as Navy will go on to the NCAA Regional Tournament—the first year the Patriot League gets an automatic bid. But Thompson is even more excited about his team's prospects for next season, as, having no seniors, the Bison will return their entire line up next fall.

But in the meantime, the Bison will be left to think about what might have been.

Baseball splits weekend series with Midshipmen

By Andrew Bevan

The Bucknell baseball team used a great comeback in its first game against the Naval Academy this past Friday to propel themselves to sweep the first doubleheader against the Midshipmen. Unfortunately, the Bison were unable to keep that momentum going in the second doubleheader, losing both games to split the weekend series with the Midshipmen.

The Bison fell behind early in the opener on Friday afternoon, trailing 5-0, after four innings. Navy's pitcher looked in control until the Bison began to claw their way back into it in the bottom of the fifth inning, putting three runners across home plate.

After each squad scored a run in the sixth, the Bison went into the bottom of the ninth trailing 7-4. Junior first baseman Russ Lindberg got things started for the Bison with an infield hit. After advancing to second on a wild pitch, pinch-runner Rick Ciccione '00 came home on a pinch-hit single from junior Brad Gething.

A single and a hit batsman later loaded the bases for Orange and Blue. Two batters later, senior tri-captain and catcher Frank Fresconi connected on a grand slam home run to left center to seal the 9-7 victory for the Bison.

Fresconi sparked the Bisón offense in what would be a memorable day for him, going 3-4 with four RBIs. Lindberg went 2-3 for the Bison.

"We had a positive approach to the game even though we were down," head coach Gene Depew said. "Everyone had a good feeling going into the last inning. We had built some momentum."

Senior tri-captain Matt Potalivo turned in an impressive pitching performance for the Orange and Blue, going all the way without giving up a walk on just one day's rest.

"The game was as good a team effort and rally that we have had all year," Depew said.

The Bison fed off their momentum in the first game to blow open the second game in the first inning, plating 11 runs. This offensive outburst was highlighted by Fresconi's second grand slam of the day, which came just 50 minutes after his first, and a three-run home run by Gething. Ian Joseph '01 had two hits in the inning.

Fresconi continued his hot hitting in the fifth with a two-run home run to extend Bucknell's lead to 10, 14-4. He tied the school and Patriot League record for home runs in a single-game with his second blast of the contest.

After the game was suspended because of darkness after five innings of play, the Bison came out on Saturday morning to close out the sweep of the first doubleheader, winning 14-6.

Chris Lackett '02 picked up his third victory of the season, giving up three earned runs on five hits, and striking out two. Joseph went 3-4, and Gething went 2-4 with three RBIs for the Orange and Blue. Every player in Bucknell's lineup had a hit in the game.

In the third game of the series, the Bison faced a tough challenge in Navy pitcher Shane Groover, last year's Patriot League Pitcher of the Year. Groover did not disappoint, going all nine innings while giving up only two walks and striking out nine.

Senior pitcher Scott Perry was just as effective on the mound for the Bison, giving up only two runs until the top of the ninth when fatigue sent in. Perry hit two batters in the inning and threw a wild pitch. The Midshipmen plated four runs in this frame en route to a 7-3 victory.

Kevin Eiben '01 went 3-4 with two RBIs and Fresconi went 2-4 for the Orange and Blue.

"It was a real tough loss for us," Depew said. "I thought we really

Bison end losing skid

By Brooke Rea

In an tough pair of Patriot League doubleheaders against Army and Holy Cross this past weekend, the Bucknell women's softball team went 1-3, pulling out a victory over Holy Cross in the fourth game.

Saturday the Bison faced Army, the preseason favorite and top-ranked team in the Patriot League. Despite Army's reputation, BU refused to be intimidated and made an impressive showing in both games, failing short by only one and two runs, respectively.

"I was very pleased with our showing against Army," said Captain Nicole Zergebel '00. "We went 6-5 and 4-2 against the number one ranked team, and this was definitely the best showing that we've had. It will be a real positive going into the tournament knowing we can compete with the top teams."

In the opener, Bucknell came out strong with a solo homerun from sophomore Jenna Demetriades in the bottom of the first. Army plated a run in the second and two more in the third to lead 3-1, but an RBI by Meredith Gill '03 brought Lauren Titus '02 in for one more, cutting Army's lead to only one run. A three-run inning for the Lady Knights was matched by the Bison, but Army held for the 6-5 victory.

Sophomore Kelly Dugan contributed the Bison offense with a one-run triple and Gill brought in two more with her double, both in the fourth. Freshman Lauren Box pitched an impressive three innings of relief, allowing no hits against 11 batters and striking out two.

"We played very well against Army," coach Terrie Grieb said. "We gave up two runs on a bloop hit and essentially could have won the game. We pitched well, played well defensively, and hit well."

In the second matchup, the Bison answered Army's first inning run with one of their own when Dugan brought Zergebel to the plate with a double. A three-run sixth inning put Army up 4-1, and sophomore Heather Janowski's two-out homerun in the bottom of the seventh brought Bucknell home a run, but darkness cut the inning short and the Bison fell 4-2.

Despite the losses, captain Kristina Tan '00 feels good about the team's performance.

"Army is always a great team to play," she said. "They drive competition in themselves and in the team they are playing. We played cleanly, we played solidly and we had fun."

Sunday the Bison hosted Holy Cross and came back from a difficult opener to win the second game and break their nine-game losing streak with a 3-2 victory.

Tim Choate—The Bucknellian

Nicole Zergebel '00 and the Bison play St. Joseph's this Thursday.

In the first game, Holy Cross overpowered the Orange and Blue with 14 hits, which brought them a sixth-inning lead of 11-1. BU's sole run came off a double by Charity Ford '01, who batted 2-3 in the contest. Other hits for the Bison came from Tan, Demetriades, Titus and Dugan.

"We were not there at all in that game, mentally or physically," Grieb said about the first match-up. "But when we came back out against Holy Cross and won 3-2, that showed a lot of character."

The second game against Holy Cross marked a turning point in the season for the Orange and Blue. With this victory, they boosted their league record to 2-

Bison Profiles

Tan and Zergebel shine despite tough season

By Brooke Rea

"Anyone can keep spirits high when a team is winning," said Karen Langhauser '01, "but keeping a team that isn't doing well from falling apart is a challenge."

This is a lesson seniors Nicole Zergebel and Kristina Tan have learned this year as the co-captains of the Bucknell women's softball team, and both say they are stronger people because of it.

"Even when I am having a bad day, I can't show up at practice and let people see that," Zergebel said. "On a team you always have that other person to look to who gets you fired up, and now that person is me."

Tan and Zergebel started the season with a well-defined list of goals. "We have watched previous captains and knew what we wanted to do and what not to do," Tan said. "So we made team unity our goal and decided that we want everyone on the team to be playing because they love the sport and they want to be out there every single day."

So far, these goals seem to have been met and Zerg and Tanny (as they are known to teammates) have emerged as vibrant and influential leaders.

"They are both doing a tremendous job leading a very young squad through a trying season," head coach Terrie Grieb said. "Zerg is a vocal leader on the field, and Tan is more of a quiet leader. They are both having outstanding years offensively and defensively, and they are good students."

Tan began playing softball when she was nine years old and continued throughout high school, when she also played soccer and swam competitively. Knee surgery after her senior year could have been the end for Tan, who didn't intend to play softball at Bucknell.

"I didn't think I'd be playing when I got to college," Tan said. "But after freshman year I missed it so much that I thought I'd try it and see if my knee would hold up."

In three years of playing for Bucknell, Tan has carved quite a niche on the team. "She is a great captain and always has something positive to say no matter what the situation," Junior Steph Morgan said. "And with the season we are having, that has been one of the bright points. She always works hard and gives 100 percent no matter what kind of day she is having."

Sophomore pitcher Lauren Potente values Tan's presence behind the plate when she is up on the mound. "Even in really heated moments when there are a lot of nervous feelings, Tanny always has the ability to make me laugh and feel at ease when I see her smiling behind her catcher's mask," Pontente said.

Tan recalls last year as a highlight of her career at Bucknell because she was the starting catcher and played in almost every game. "That season really proved to me how much I love to play," she said.

And as a captain this year, she couldn't be happier. "Being captains with Nicole has been great. Our friendship has grown, our partnership on the field has grown and just being out there with Nicole is a great thing for me."

Dan Blair—The Bucknellian

Senior softball captains Nicole Zerebel and Kristina Tan have kept spirits high on the Bison squad, despite its disappointing spring season.

Tan is involved with BAAD (Bucknell Athletes Against Drugs and Alcohol) and is a management major. Her post-college plans are not definite, but she hopes to remain in the New York/New Jersey area after college.

Zergebel also started playing softball as a kid and played throughout high school. She became more intense about the sport in tenth grade while also playing soccer and tennis.

As college approached, Zergebel realized that softball was becoming her favorite sport and, after meeting the coach and team members at Bucknell, she decided to become a Bison.

As an underclassman, Zergebel competed for the second base position and, as her career continued, she established herself as a key player for Bucknell. Last year she was named to the Second Team All-Patriot League for second base, proving her formidable defensive presence.

This season she has picked up her offense and is batting over .300, plating her first homerun against Lafayette a few weeks ago.

"Zerg is perhaps the most personable, easy to talk to individual I have come across at Bucknell," Langhauser said. "She's realistic and honest, and she makes softball fun even at times when it may not seem like it is."

Zergebel admits that taking on such a large leadership role this season has been harder than she expected. "I didn't anticipate what a big job it would be. We are a young team without the confidence that we should have, and it's tough to keep spirits up this spring, when in the fall we were blowing teams away. I think we all thought that we would have a very successful season."

The true value in the leadership exhibited by Tan and Zergebel is not the Bison's record, but the unity they have brought to the team. "Tan and Zerg have kept us together as a team and showed us how to play both for each other and for ourselves," Langhauser said. "They believe in the ability and heart of this team when everyone around us gives up."

Zergebel is a political science major with a minor in legal studies. She is not positive about what she will do after college, but is looking into juvenile or family law, or possibly into the social work field.

What Tan and Zergebel leave behind at Bucknell is a tradition of excellence on and off the field, and they will not soon be forgotten.

"Tanny and Nicole believe in every one of us, and they have definitely placed an emphasis this season on believing in ourselves and setting personal goals we can achieve by working together," Potente said.

Sophomore Heather Janowski put it best when she summed up the season.

"I know we haven't had the best year when it comes to wins and losses, but I have had the opportunity to play with two of the best people anyed

National Sports

What goes up must come down

Seventh-seed Penquins out to 3-1 series lead over second-seed Washington

By Kevin Logan

It's a basic law of physics: what goes up must come down.

Some say this applies to gravity, but watch the first round of the NHL playoffs and you'll realize it has nothing to do with gravity ... and everything to do with the Washington Capitals. The Caps rose out of the woodworks the second half of the season to nearly take over the Eastern Conference. Now they're about to disappear right back into that black hole they shot out of.

Credit this to the seventh seed Pittsburgh Penguins. Led by Art Ross Trophy winner Jaromir Jagr, the Pens took a commanding 3-0 series lead, despite the Caps being the second seed and having the better record during the regular season. Pittsburgh outscored the Caps 13-4 over the three games, including a 7-0 shelling in Game 1, in which Jagr set up four of the goals. Game 2 was a bit of a different story, ending in more dramatic fashion as Jagr again came through, netting the game-winner at 5:49 of overtime.

It was another one-goal game Monday night as Pittsburgh's Czechs combined for six points. Jiri Slegr scored his second of the playoffs, assisted by Martin Straka, with less than five minutes remaining in the third to give Pittsburgh a 4-3 win. Jan Hrdina recorded his third and fourth goals of the playoffs, and Jagr added another two assists, bringing his playoff point total to eight. Neither team had more than a one-goal lead at any time during the contest.

The Caps pulled out a 3-2 victory in Game 4 Wednesday night in Washington, but still find themselves down 3-1 in the series. The Capitals need three straight victories to stay alive, but must face the fact that only two teams in NHL history have ever come back from a 3-0 deficit—the 1942 Maple Leafs and 1975 Islanders.

The Goal That Wasn't

It's another elementary law of physics: force equals mass times acceleration. And when John LeClair provides that force, tremendous acceleration results—enough acceleration to rip a puck through the mesh behind Sabres goalie Dominik Hasek. LeClair, who owns one of the harder shots in the league, took a slap shot from the face-off circle to Hasek's left that appeared to have beaten Hasek to tie Game 2 at one.

Jagr has led the Pens to a 3-2 lead.

Upon further review, however, it was discovered that the shot had actually gone wide of the left post by a few inches and bore a hole through the net on its way in. The goal was counted, and Philadelphia went on to win Game 2 on a third-period goal by Eric Desjardins, turning the LeClair "goal" into a major controversy.

The Flyers continued on to take Game 3 by a score of 2-0, but Buffalo wouldn't accept defeat that easily, taking Philadelphia to OT in Game 4. Another bad call menaced the Sabres, as referee Brad Watson blew a quick whistle that negated a Vladimir Tsyplakov goal early in the first period. Despite this, Stu Barnes came through to net the game-winner at 4:42 of overtime and send the series to Game 5 Thursday in Philadelphia.

Hasek turns to see LeClair's shot in the net.

TORONTO vs. OTTAWA: Toronto dominated the first two games, including a 2-0 shutout in the opener and a 5-1 spread in Game 2. But the Senators closed the series to 2-1 Monday night with a 4-3 victory over the Leafs. Roba Zamuner led Ottawa with two goals, including the game-winner with less than six minutes remaining. The Senators extended their series lead to 3-1 with a 2-1 victory in Game 4 on Wednesday night.

NEW JERSEY vs. FLORIDA: Games 1, 2 and 3 were close—all decided by a goal—but New Jersey has come out on top of all three. The Devils have held Pavel Bure, the regular season's top goal scorer, to just three assists and eight shots. New Jersey looks for the sweep Thursday in Florida.

ST. LOUIS vs. SAN JOSE: St. Louis in four—that seemed to be the general consensus regarding this series. But despite the fact that St. Louis was the top team in the league and went undefeated against the Sharks in five regular season games, San Jose is leading the series 2-1. Owen Nolan struck twice in Game 3, including the game winner.

DALLAS vs. EDMONTON: If not for Bill Guerin, the Oilers' scoreboard would have shown a big fat goose egg. Guerin recorded all three of Edmonton's goals, but it wasn't enough as the Stars took Game 4 by a score of 4-3. It was Edmonton's second hat trick of the series, the first by Doug Weight in the Oilers' Game 3 win. The Stars now lead the series 3-1.

COLORADO vs. PHOENIX: The Avs lead 3-0, thanks to a four-point effort from Adam Deadmarsh in Game 3. Deadmarsh got two goals, including the game-winner as Colorado ousted the Coyotes 4-2. The Avs looked to sweep on the road Wednesday, but lost to the Coyotes 3-2, making the series 3-1.

DETROIT vs. L.A.: The Red Wings have dominated the Kings and claim a 3-0 series leading going into Game 4 on Wednesday. Chris Osgood recorded his seventh career playoff shutout in Game 1 for the Wings, and Martin Lapointe recorded his first ever playoff hat trick in Game 2's 8-5 shootout victory.

No big surprises in NFL Draft

By Rob Schmicker

After months of speculation, the 2000 NFL Draft is finally history. With the #1 overall pick, the Cleveland Browns selected (fittingly enough) DL Courtney Brown from Penn State University. With the first selection in the draft, the Browns obviously were able to select whomever they wanted, but with three equally enticing players like Brown, LaVar Arrington and Peter Warrick, the decision was difficult.

Ultimately, the Browns decided that even though Arrington and Warrick may win a few games for them, Brown will prevent them from losing even more games.

Brown is the ultimate team player, and by signing a contract on draft day, he has showed that he doesn't want any distractions and is ready to play football for the Browns. Also, defensive lineman are harder to come by than linebackers. The last defensive end to be selected first overall was future Hall of Famer Bruce Smith in 1985. So if history means anything, Brown could be on the verge of greatness.

Warrick would have given Tim Couch an explosive receiver and would have added instant firepower to their offense. Instead, they were able to select Arizona WR Dennis Northcutt with the first pick in the second round.

Northcutt is a step down from Warrick, but should fit in nicely with potential 1000-yard receiver Kevin Johnson for the young Browns offense. But with the selection of Brown, Cleveland now has one franchise player on each side of the ball that they can build around. Just by selecting Brown, Cleveland's draft was successful.

With the second and third picks, the Washington Redskins selected Arrington and Alabama OL Chris Samuels. The Skins have had mixed results with receivers drafted in the top 10 in the past, so they passed on Warrick and went with Samuels, who should be a fixture for the 'Hogs for years to come.

With their off-season acquisitions, as well as their draft, the Skins are emerging as one of, if not the favorite, to win the NFC this year.

That left Cincinnati the opportunity to select Warrick. Now with Warrick, holdout Carl Pickens may become expendable. Teamed up with WR Darnay Scott and QB Akili Smith, last year's third overall pick, the Bengals might just have the future's most prolific passing offense.

In picking Warrick, they skipped over four talented running backs, and now have to deal with their disgruntled RB Corey Dillon, who says he will not return to the team. Hopefully they can get the Dillon situation cleared up because it's the last thing the worst team of the 90's needs.

Baltimore moved up in the draft during the offseason, and had their sights set on improving their offense. With coach Brian Billick seemingly behind QB Tony Banks, the Ravens were looking for a receiver as well as a running back.

In what was a surprise to me, the Ravens selected Jamal Lewis with the fifth pick. Lewis, who missed all of the '98 season with a knee injury, was ranked as the third best RB in the draft and probably would have still been around later in the draft. They could have traded down and used their second pick (10th overall) to select Lewis and still be able to get a receiver in the low-teens.

But Billick seems perfectly happy. "At No. 5 and 10, to come away with a running back and a wide receiver, I don't know that you could write a better script for us," he said. They might be one of the more underrated teams in the AFC, and after an 8-8 season, could surprise many people.

With the trading of Keyshawn Johnson to Tampa Bay, the New York Jets had four first round picks. I really thought that they would have tried to get Baltimore's pick to use on DT Corey Simon.

But they weren't able to pull the trigger and were left with Tennessee DL Shaun Ellis at the 12th position. With the next pick, they passed on TE Bubba Franks and selected LB John Abraham instead.

The Jets really have never had a good TE and could have used Franks. Instead, they selected West Virginia TE Anthony Brecht with the 27th pick and hope that he will become a solid player.

In between Abraham and Becht, they used their 18th pick on the best player available at the time, QB Chad Pennington. Pennington would have been a perfect pick for Pittsburgh or San Francisco, but neither took him.

With Vinny Testaverde getting older day by day, this was a great selection. Pennington, who went 45-6 in college, will be able to learn from Vinny and one day take over for the Jets when he retires.

Besides the Pennington pick, the Jets had a sub-par draft. With four picks, you should be able to get at least one big name player, and they weren't able to pull it off. But hey, you never know with Bill Parcells. He seems to know stuff that us mortals don't.

The biggest surprise of the draft was Oakland's selection of Sebastian Janikowski, who became the first kicker ever to be drafted in the first round. Effective kickers are normally hard to come by and tricky to find—that's why they never go in the top rounds. Teams simply don't want to take the risk of using a high draft pick on a kicker.

But with Janikowski, the Raiders may have gotten the real thing. After losing several games by less than three points, the Raiders have improved their chances of winning, because Sebastian is almost automatic from inside 40 yards. Plus, he's a colorful guy that can definitely flourish in Oakland.

Besides that, this year's draft was pretty much boring. There were no big surprises as everything went pretty much according to plan. I think Arizona, Seattle, Washington and Baltimore came away the winners.

Arizona selected Thomas Jones with the 7th overall pick and instantly solidified their offense by taking some of the pressure off of Jake Plummer.

Seattle, who somehow saw Shaun Alexander slip to 19th, made the Alabama RB its first pick and then later helped its line by selecting Wisconsin OT Chris McIntosh. Both should give Mike Holmgren's offense more punch in years to come.

Baltimore might have pulled even with Jacksonville and Houston in the AFC Central, while Washington has become a favorite in the NFC. Both may look back at this year's draft in years to come as the building block of their success.

Cleveland picked Courtney Brown #1.

NBA Playoff Picks

By Justin McCarthy and Ali Ahmed

Indiana vs. Milwaukee

This is a matchup between a veteran team with years of playoff experience and an upstart team of young players led by a few seasoned veterans. In the past nine years, the Pacers have missed the playoffs only once, while the Bucks, in that same time frame, have only made the playoffs once. The Pacers are accustomed to the playoffs, and they know what it takes to advance to the next round, while the Bucks have not won a first round playoff series since 1989. The Bucks will need their superstars Allen and Robinson to step up their play and make their team a legitimate playoff threat. One player who the Bucks do have with valuable playoff experience is Sam Cassell, who led the point for the two Houston Rocket championship teams. The Pacers meanwhile will turn to Rose-their new leader-to lead them to the latter rounds. The Pacers will also turn to their old gun, Miller, to steal the show. Miller alone is capable of stealing a playoff series with his sniper-like sharpshooting abilities. The integral matchups to watch in this series will between Miller and Allen, two guys who can light it up from anywhere on the court with their jumpers; and Rose and Robinson, two agile and slashing shooters. **Justin's pick: Pacers in four**

Miami vs. Detroit

Although the Heat have split the season series with Detroit, they have not defeated them without Hardaway, and who knows if he'll be 100 percent when he returns from his sprained foot injury. Also, the Heat have a history of choking in the early rounds of the playoffs, being eliminated the last two years by the number seven and eight seeds respectively. In the past six years, the Heat have qualified for the playoffs five times, and four of those times they were eliminated in the first round. The Pistons have faired no better in first round series, losing in the first round three out of the last four years. There are many key players to keep an eye on. For the Heat, Mourning should have no problem in the middle establishing his presence on the boards and the scoreboard. Many critics, including my fellow writer, Ali, have said that Hardaway is not good enough and that he lacks the determination to lead a championship team. However, I do not agree with their sentiment, and I believe that Hardaway has the potential to lead the Heat into the late playoff rounds. For the Pistons, they will depend on Stackhouse, who should easily be able to dominate the older and slower Majerle. But the most important matchup in this series will be between Hill and Mashburn. Hill is a more integral part of his team, however Mashburn is capable of getting hot and taking over a game. If either one is able to dominate the other, then the series could be decided right there. **Justin's pick: Heat in five**

New York vs. Toronto

Toronto has dominated the Knicks in every possible way in every game they have played this season-winning three of them by double figures and losing one by less than a basket. However, the Knicks have one huge advantage over the young Raptors. This is Toronto's first ever playoff appearance, and it is yet to be seen whether it can handle the pressure of the playoffs. On the other hand, the Knicks have qualified for the playoffs in 12 consecutive seasons, and have advanced past the first round the last eight years. Despite all this, the Raptors seem to hold the Knicks in their pocket. They have virtually shut down the Knicks scoring attack, allowing only two players (Sprewell and Ewing once each) to score over twenty points. And Carter has been virtually unstoppable, as he has averaged 33 points a game against one of the best defenses in the league. However, it is yet to be determined whether or not the young Carter can lead his team past the Knicks in a playoff series. Personally, I believe that Carter is not experienced enough to lead a team through the playoffs, and remember last April when the defending Eastern Conference Champion Knicks entered the playoffs as the eighth seed. The Knicks have the uncanny ability that few teams possess-but that every team wants-to be able to transform into a different team playoff time. **Justin's pick: Knicks in five**

Charlotte vs. Philadelphia

Both of these teams are looking to be this year's Cinderella. However, the glass slipper can only fit one of them, and it looks as if it fits Tony Kukoc. The second Kukoc came to Philly, the 76ers were immediately hailed as a legitimate playoff contender. He has been the difference this latter part of the season for the Sixers. For instance, even though Charlotte has beaten the Sixers three times in four contests this season, the one game that they played after the acquisition of Kukoc, the Sixers won. Kukoc gives the Sixers a legitimate and established second option that they know they can rely on. Kukoc's playoff experience with Jordan's Bulls can only benefit the young Iverson and the rest of his teammates. The premier matchup to watch in this series will be between Iverson and Jones. No one-not even one of the best defenders in the league like Jones-can stop Iverson. He will just have to try to contain him and prevent him from exploding and taking over the series. If Iverson breaks lose, the Hornets would have stung themselves out of the playoffs. **Justin's pick: Sixers in four**

L.A. Lakers vs. Sacramento

After losing their season finale to the Sonics, the Kings now have the daunting task of facing the Lakers in the first round. The Kings can really put up numbers on the board, but the problem is that the Lakers can really play defense. The key to this series will really be Kobe Bryant. Kobe has turned into a defensive stopper at both the backcourt positions as well as at the number three spot. For the Kings to do well, they must really get dominating numbers out of Chris Webber. The Kings will need to get great production out of their bench to give the Lakers trouble, but I don't believe that their offensive firepower will be enough to give the Lakers and Shaq trouble. **Ali's pick: Lakers in four**

Utah vs. Seattle

I seriously believe that the Malone and Stockton duo is coming to an end. This will be the last time we see Stockton displaying his skills in a playoff series. Gary Payton has meant everything for his team this year and he should have a big series against the Jazz. The Jazz will really miss Shandon Anderson this year, as they will have no one to defend Gary Payton with. On the other side of the ball, Horace Grant will have his hands full against Malone, but the wily veteran should limit Malone form completely dominating the game. The Jazz need Russell to become the reliable second option. At the end though, I think that the Sonics, with Paterson, Barry, Maxwell and Lewis, have the athleticism to give Utah a lot of trouble. I might regret saying this, but I think that the Sonics will upset the Jazz with Payton leading the way. **Ali's pick: Sonics in five**

Portland vs. Minnesota

This should easily be the most exciting matchup in the playoffs out of both conferences. The two teams split their regular season series and, going into the playoffs, the Wolves have been red hot while the Blazers have been mediocre. Yet, the wolves are a very young team, while the Blazers are led by veterans like Smith, Shrempf and six-time NBA champion Pippen. The Wolves should give the Blazers trouble because they have versatile players who match up well with the Blazers. Who will stop Kevin Garnett? Wallace has a chance, but he will have to produce on the other side of the ball also. Stoudamire and Brandon should also be an interesting matchup, with both neutralizing each other. The series should come down to the bench and the match up of future star Szerbiak and aging Scottie Pippen. I'll take Pippen any time. **Ali's pick: Blazers in four**

Phoenix vs. San Antonio

This matchup has lost a lot of its appeal dues to injuries on both sides. The Spurs might lose Duncan, while the Suns have lost both Kidd and Tom Gugliotta. Due to their superior depth and improved play by Penny and Rogers, the Suns have kept playing well while the Spurs have struggled with Duncan barely 50%. This is when everyone realizes how the entire Spurs team is Duncan and Robinson. The Suns have enough talent to beat the Spurs, especially if KJ can regain his feel. He does not need to score, but his experience can help run the team smoothly. The Suns have enough weapons in Rogers, Robinson, Marion and Hardaway to carry the load, but they need the other players to play key roles. The question will be if Robinson can regain his dominating form of years ago and maintain it over a series. **Ali's pick: Suns in four**

Sports

Track head and shoulders above competitors

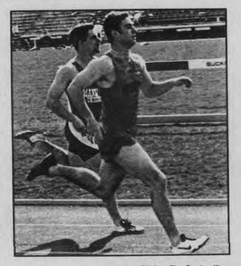
By Justin White

The Bucknell track teams have yet to meet their match on their home turf this season. Both the men's and women's teams dominated the Bucknell Heptagonal held at Christy Mathewson Memorial Stadium this past Saturday.

According to head coach Art Gulden, the teams that participated were "better than anyone in the Patriot League tournament except Army and Navy." This isn't good news for the Bison's league rivals, as both teams won by more than 75 points.

However, at least on the men's side, the score was not very representative of how close the meet really was. Scoring the meet as a dual meet, Bucknell would have only defeated second-place Lock Haven by about 20 points.

What does Bucknell have that none of these other teams have? The answer: depth and the ability to place high in every event.



Dan Blair—The Bucknellian

The Bison will host Shippensburg Saturday.

With the Patriot League Championships only three weeks away, the team is appropriately showing improvement every step of the way. The men had a number of very strong performances.

Senior co-captain Dave Pomfret won the pole vault with a school-record clearance of 16'. Another senior, Dave Bronfenbrenner, won the 3000m Steeplechase in a time of 8:59.56, good enough to move him into fifth on the BU All-Time Performers list. Shawn Mathews '01 won the discus event with a throw of 164' 1", moving him into second place in school history.

Other winners for the men included Matt Kaplan '00 in the hammer throw with a toss of 50.72m, James Hollins '01 in the triple jump with a leap of 46' 7.75" and Don Shump '00 in the shot put with a mark of 49' 2.5".

The women's team also dominated, winning 14 out of the 20 events and beating second-placeLock Haven by more than 130 points.

For the second week in a row, a new record was set in the 400m hurdles. However, this time it was broken by a different freshman. Khadija Shariff clocked in at 1:02.43, breaking Edwina Bourn's mark by .43 seconds.

"It was exactly what I wanted to do," Shariff said of her performance. Speaking of her friendly rivalry with Bourn, she stated, "We're best friends ... It might appear to someone who doesn't know us that there's a rivalry, but we work off of each other to help each other get better."

Seniors Carly Graytock and Linda Mangan and sophomores LaTonya McSwain and Becki Marshall swept the distance events for the Bison. Graytock took the 5000m (18:00.90), Mangan won the 1500m (4:45.65), McSwain won the 800m (2:15.41) and Marshall captured the 3000m (10:06.99).

Tri-captain Audrey Myers '00 won both the hammer throw and discus throws with distances of 48.54m and 39.84m, respectively. Also, tri-captain Kim McGrath continued to jump well, winning the long jump (18') and the triple jump (38'6.75").

Other winners were Andrea Nyce '02 in the pole vault with a clearance of 10', Yetunde Daniels '00 in the 200m dash in a time of 24.91 and Lori Allen '00 in the shot put with a 41'9" throw.

The Bison compete this Saturday in their final home meet of the season in a dual meet with Shippensburg. Shippensburg always brings tough competition for the Bison.

BASEBALL from page 11

played well and played good defense. It was unfortunate the way the game ended," Depew said.

In the final game of the series, the Midshipmen struck early, getting two runs in the top of the first. The Bison answered with a run of their own in the bottom of the inning, thanks to another RBI from Fresconi. Navy put four runs on the board during the fourth, fifth and sixth innings to take a 6-1 advantage. The Bison could not mount any offense until the last inning, scoring twice but falling in the end, 6-3.

"I was very disappointed in the way we did not hit," Depew said. "We didn't get it done. We just never got the hit or momentum we needed until the seventh."

Fresconi was named Patriot League Player of the Week for his stellar offensive performance. He went 8-13 with 11 RBIs on the weekend.

The Bison now stand at 6-6 and are in fourth place in the League with conference games remaining against Lehigh and Army. This weekend, the Bison host Lehigh in a crucial series.

"We have to have a good weekend this weekend," Depew said. "We cannot afford another .500 weekend."

The Bison face a tough opponent in Lehigh, who has the leading hitter in the nation. "We need everyone to be at the top of their game," Depew said.

SOFTBALL from page 11

8 and 10-20 overall.

The game remained scoreless until the fifth inning, when Holy Cross plated two to Bucknell's one. Coming back in the bottom of the seventh, the Bison scored two to take the game, 3-2.

Gill went 2-4 and had two RBI's off of two doubles, while Demetriades also went 2-4 and had one RBI. Janowski went 1-1 in a pinch hit appearance, while Ford and Zergebel also contributed hits in the winning effort.

"This game showed how much heart our team has," Zergebel said. "We can get up despite a letdown in the first game. "

Tan agreed. "In this game we showed that we don't give up in the end," she said. "It was definitely the biggest team effort we've had in a while, and it brought back a lot of morale by reminding us how we can really play."

The Bison host St. Joseph's today at 3:30 p.m. for their final doubleheader of the season.

1-1 week for Men's Tennis

Stephanie Metz—The Bucknellian

Men's tennis....

By Mike Brophy

Coming off of a very tough week of competition where it suffered three losses, the Bucknell men's tennis team posted a very solid win over Patriot League rival Lafayette. But the Bison's hopes of two consecutive wins were shattered, as they were dominated by one of the toughest Patriot League teams, Army. The Bison now hold a 6-11 record, with a 1-3 mark in league competition.

Facing Lafayette on Apr. 13, BU showed just how much potential the team could display, as it won all six singles matches and two of the three doubles matches to cruise 7-0. This victory gives the Bison six straight wins over the Leopards.

One highlighted match was number one singles player and senior captain T.K. Kelly's first victory of the season. Kelly was sidelined throughout the beginning of the season with several injuries, but he has now started to bring his game back to previous levels. And he proved this against Lafayette, with a 7-6 (5), 4-6, 6-4 triumph over H'Cone Thompson.

Unfortunately, the Bison's next match did not prove as effective, as they suffered a hard loss to Army, 7-0. Army, who looks to be the top team in the Patriot League this season, simply outplayed Bucknell; during this season Army has defeated Navy, a team that the Bison lost to 7-0 earlier in the season.

"(Army) was the toughest competition that we expected to face," head coach Bob Hammerlee said. "These guys are for real, but we expected a point or two."

Todd Jacobs '03 continued to play strong with a solid victory over Lafayette's Ryan Collins and a hard-fought match against his Army opponent. "I am very happy with the way things are going this season," Jacobs said. "I didn't expect to being playing this high on the team, but I am happy with my performance so far".

Jacobs noted that the team knows that its season record would be better if it wasn't affected by injuries, but each member is still working hard.

The Bison continued their league schedule on Wednesday, as they traveled to face Patriot League rival Lehigh.

Women drop a tough one to Lehigh

By Carmen Mauriello

The Bucknell women's tennis team dropped its third consecutive Patriot League contest last Saturday, falling to Lehigh 5-4. The pivotal points in the match were the number two and five singles matches, which both went three sets. Lehigh claimed both, and carried an advantage into doubles play that the Bison could not overcome.

Jill Wurzburg '03 came out strong at number two singles, capturing the first set 6-1 against Lehigh's Erica Feinman. But after dropping the second set 4-6, Wurzburg lost the hard-fought third set, 5-7.

At number five singles, Laura Maisel '03 bounced back from a 1-6 loss in her first set to take the second set 6-3 against Lehigh's Andrea Scott. Unfortunately, Maisel was swept 6-0 in the third set.

Singles winners for the Bison were co-captain Tracy Honko '00 at number four (7-6, (3), 7-5) and Kary Wolford '02 at number six (6-1, 6-3).

The Bison claimed two of the three doubles matches. Wolford was a double-winner on the day, as she teamed up with Maisel to seize number three doubles, 8-5. Kristen Inglis '02 and co-captain Kerry Callaghan '00 paired up to capture number one doubles, 9-7.

Wolford improved her singles record to 2-1 and her doubles mark to 1-2 with her performance. "Kary's just playing top tennis right now," head coach Rebecca Helt said. "She's at her peak and we need her to continue playing this way over the coming weeks."

Bucknell's match against Delaware was postponed due to rain this past Tuesday, and it is tentatively rescheduled for this coming Wednesday. Next up for the Bison is a match at Patriot League rival Army this Saturday.

The confidence of the Bison has begun to grow as the players have settled into their roles and the team has overcome some early turmoil. "I see improvement with each match," Honko said. "It has taken time for each of us to get adjusted to playing up a spot or two. I am extremely optimistic about our chances against Army and at Patriot Leagues."

"Our main focus over the next two matches is going to be on mental preparation," Helt said. "If we can go into (April 29-30's) Patriot League Championships mentally tough and play well, then we can come out of them feeling very proud about our performance."

Paige Cull—The Bucknellian

Laura Maisel '03 goes to the net.

Almost Bullish

I was reading *USA Today* last Monday and glanced upon Shaquille O'Neal's line in the Lakers 101-95 victory over Minnesota last Sunday: 33 points, 14-24 field goals, 14 boards and eight assists. "Off night," I thought. "Geez, and the Lakers only won by six. They must be slipping."

There's something wrong with that picture. It seems like we've begun to take for granted the dominance of Shaq and the Lakers without realizing the real implications: the Lakers of the 00's will be the Bulls of the 90's and Shaq will rival and possibly exceed Michael Jordan as the greatest NBA player ever.

Need some evidence: The Lakers closed the regular season with a 67-15 mark—the best in franchise history and the second-best in NBA history (to those darned Bulls). They've won 35 of their last 39 games and enter the playoffs as the West's top-seed. And Shaq is the undisputed pick for league MVP, as his 29.7 points per game and .574 field goal percentage lead the league.

How did the pieces come together for this soon-to-be dynasty? Well, it all started in 1996 when the Lakers wrestled a free-agent Shaq from the Orlando Magic. In addition, they drafted an 18-year-old prep phenom, Kobe Bryant, who would immediately pay dividends.

In addition to these two stars, the 96-97 Laker team boasted All-Star Eddie Jones, Nick Van Exel, Elden Campbell and Robert Horry. The young and versatile squad finished with a 56-26 regular season mark despite Shaq missing 31 games with a knee injury. The Lakers bowed out to Utah in the Western Conference Semifinals, but people around the league knew that they would be a team to be reckoned with in the future.

Commentary

Carmen Mauriello

Sports Editor

Shaq solidified himself as a force in the West, averaging 26.2 points and 12.5 rebounds per game.

They entered the 97-98 season with high hopes and did not disappoint in the regular season, gaining the best start in franchise history at 11-0 and finishing with 61 wins. Shaq, Van Exel, Jones and Bryant were all named All-Stars — the first time in 15 years that four players from the same team were selected—for leading the league's highest-scoring offense. Shaq posted another dominant campaign, leading the league in field goal percentage and finishing second to Jordan in scoring.

But after taking their Western Conference Semifinals series 4-1 over Seattle, the Lakers were swept by the Jazz in the conference finals. Critics began to question why this star-studded unit was unable to get it done come playoff time. The Lakers' coaching and team unity came under fire, as the players were seen as placing more importance on their individual performances instead of that of the team.

These concerns resulted in a coaching change and blockbuster trade in the lockout-shortened 98-99 season. Del Harris, often criticized for failing to keep discipline among his youthful team, was fired 12 games into the season and was replaced by assistant Kurt Rambis for the remainder of the season. Sharpshooter Glen Rice was brought over in exchange for Jones and Campbell. And Van Exel, a behavior problem, was let go.

The first link to the Bulls' dynasty was established, as Dennis Rodman was brought in to help on the boards. But Rodman's antics didn't mesh well with a team lacking cohesion and in need of leadership, so he was canned after 23 games.

The Lakers finished the year at 31-19 and were swept by the eventual-champion Spurs in the Western Semi's, despite another strong showing from Shaq, as his 26.3 points per game fell just below leading scoring Allen Iverson.

With the City of Angels clamoring for a championship, the Lakers' management decided to put down the big bucks and brought in coaching mastermind Phil Jackson and his triangle offense. The backcourt was strengthened by the addition of Bulls' guard Ron Harper.

Jackson's stern discipline and hard-nosed defensive strategies proved to be the missing puzzle piece for the Lakers, as their dominance this season has revealed.

The triangle offense has been a huge success, as Rice has flourished with an abundance of open threes resulting from double-teams on Shaq and Bryant has found his comfort zone. Although many predicted that Shaq would see diminished shots and productivity under the new system, he has instead prospered with the best season of his career.

And there's no indication that any of this will change come playoff time or in the next several years to come. The Lakers have secured many of their stars to longer-term deals and have the money to pay would-be free agents whatever their heart desires.

The most important factor in the establishment of a Lakers' dynasty is that the players are happy. They love their coach; they love the players they are surrounded by and their individual games are strengthened by the talent that surrounds them: and I'm sure they don't mind winning.

Because their pie is so big, everyone is getting a piece. Shaq's putting up insane numbers, Bryant's running run the show and Rice is getting a ton of open looks. And even role players like Harper, Derek Fisher, A.C. Green, Rick Fox and Robert Horry are getting their minutes.

So I personally don't see any end in sight to the Lakers' dynasty. The pieces have been there since '96; they just needed someone to put them all together and have found that in Jackson. The only thing that can stop them is a serious injury to Shaq, but I even think that they can compete even without the big man.

As for Shaq, he just keeps getting better and better. His sheer size and strength makes him virtually unguardable for many teams, and he'll put up big numbers regardless of who you put on him. But what has led to emerge as a threat to unseat Jordan as the king is the continued development of Shaq's game.

He came into the league relying totally on powering to the basket to get all of his points. But he's worked on his outside game and developed a great baseline jumper and unstoppable hook shot. Even more impressive are the strides Shaq has made in his passing game, which he has been forced to develop due to the almost constant double-teams he faces. His pin-point passes to Rice or a slashing Bryant have enabled the triangle offense to run to perfection. Even his free-throw shooting is on the upswing.

And, of course, you can't forget Shaq's presence in the middle on defense. He has worked to enhance his dominance defensively, as seen in his increasing averages of blocks and steals. Opponents are forced to rework their offensive strategies to avoid Shaq, which is no easy task when you try to go to the basket against the Lakers.

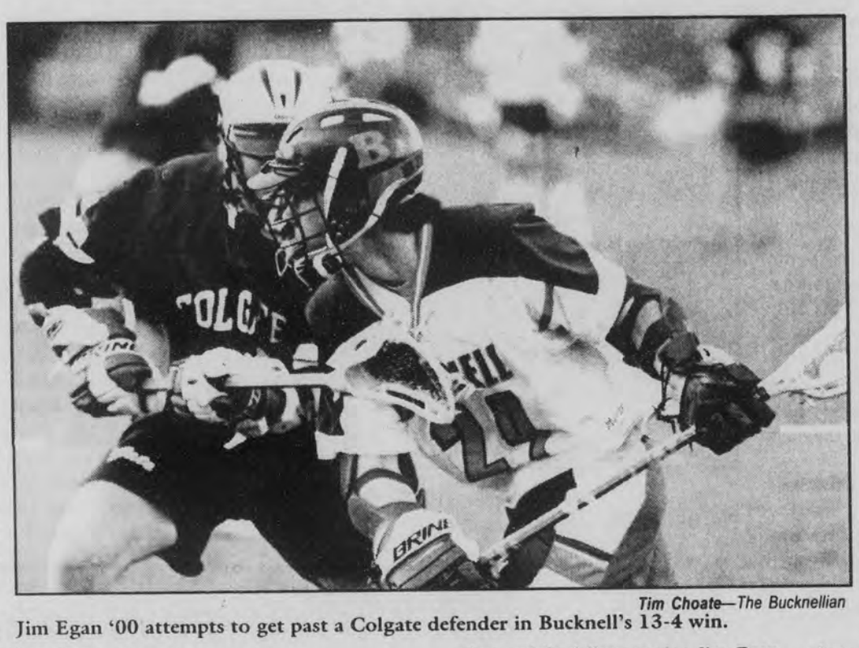
Never before has a player been so dominant in every aspect of the game. Just 28, Shaq has the potential to break several of the NBA's most revered records.

And built around their big man—like former Laker dynasties that featured Wilt Chamberlain and Kareem Abdul-Jabbar —the Lakers have the potential to steal more gold than Captain Hook.

And we'll be reading about their NBA championship series and saying, "Geez, they almost got taken to a fifth game."

#18 Bison dominate Colgate

By Mike Myers



Tim Choate—The Bucknellian

Jim Egan '00 attempts to get past a Colgate defender in Bucknell's 13-4 win.

The 18th-ranked Bucknell men's lacrosse team dominated Patriot League rival Colgate last Friday, 13-4. The Bison, who failed toscore the opening goal of the game for the first time all season, captured the lead by scoring with one minute remaining in the first and never looked back.

"Once again we were more physical than our opponents and this enabled us to dominate on both ends of the field," Michael Cheng '01 said. "Also, we were able to control the face-offs-something that Colgate is very good at. The team had a great game and we were able to put all the pieces together for the first time this year."

Cheng had an explosive game on offensive, racking up four goals and an assist.

Alex Gibson '00 displayed his usual offensive firepower by providing two goals and dishing out three assists, while fellow senior Jim Egan scored two goals and added one assist. Keith Poisella '00 and Brad VanNostrand '00 also notched two goals apiece for the Bison.

Justin Sussman '03 ran his record to 4-1 by playing a strong game between the pipes; stopping 14 of 24 shots, while allowing just four goals.

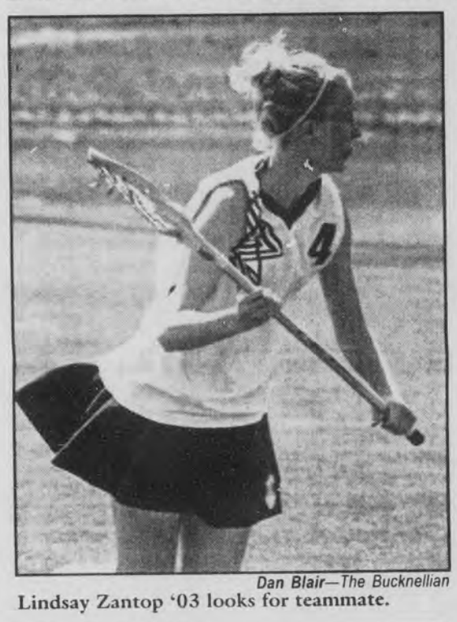
The Bison traveled to State College, Pa. to take on the Penn State Nittany Lions Wednesday, but dropped the non-league game, 10-9. Poisella scored midway through the fourth to give the Bison a 9-8 lead, but PSU switched goalies and held BU scoreless for the remainder, while it netted two goals.

Bucknell has two remaining games against Patriot League opponents this season; the Bison find themselves in a first-place tie with Hobart, with the latter holding the tiebreaker advantage.

"We can only win the rest of our games and hope that Lehigh can get its act together and beat Hobart," Poisella said. "That way our postseason hopes stay alive."

Bison put it all together against Lehigh

Bucknell's offense and defense in sync in 12-3 triumph over Patriot League rival



Dan Blair—The Bucknellian

Lindsay Zantop '03 looks for teammate.

By Carmen Mauriello

The Bucknell women's lacrosse team has had trouble all season putting together a consistent offensive and defensive performance for all 60 minutes.

When the Bison finally did so last Saturday in a 12-3 drubbing of Lehigh, they raised some eyebrows around the Patriot League as to just how bright the future is for this young squad.

The Bison stormed out of the gate, scoring the game's first two goals, and proceeded to take a 4-1 lead into the half. Suzanne Rafaelle '03 led the charge, scoring two of her four goals in the first half.

Ahead 7-1 in the middle stages of the second half, the Bison weathered a two-goal run by Lehigh and finished the game on a 5-0 run.

In addition to Rafaelle's four goals and an assist, Ashley Evans '01 and senior captain Krista Gerhard each tallied two goals and an assist. Kari Evans '01 found the net twice, Melissa Montefusco '02 tallied a goal and three assists and Jen Holiday '01 also registered a score.

Rafaelle, Bucknell's leading goal scorer with 28 tallies, has emerged as an integral part of the offense.

"Suzanne has played well all season, but on Saturday she really stepped it up and did some great things under pressure," head coach Barb Jordan said.

Freshman keeper Nicole Kallis deflected 24 Wildcat shots while only allowing three goals; in starting seven games for the Bison, Kallis has registered an impressive .650 save percentage. She credited her performance to the continued solid play of the defense and the improvement of the midfielders.

> *"The Lehigh victory was huge for us not just because we won, but because it was a total team effort and everyone played up to their potential, and played hard for 60 minutes."*
> *—head coach* ***Barb Jordan***

"We had a problem losing the ball in the midfield [earlier in the season]," Kallis said. "The midfielders' defensive transition has really improved and that's strengthened the defense a lot."

Jordan couldn't help but be impressed by her team's dominance. "The Lehigh victory was huge for us not just because we won, but because it was a total team effort and everyone played up to their potential, and played hard for 60 minutes," she said.

Unfortunately, the Bison couldn't keep their momentum rolling against Colgate this past Wednesday, as they fell 19-8. The next test for the Bison will be a home contest against American University this Saturday at 1:00 p.m.

"If we continue to play like we did against Lehigh, we will have reached our goal," Jordan said, "which was to play consistently and up to our potential."

Water polo nabs third at Alleghenys, earns bid to Eastern Championships

By Allison Kuhn

The Bucknell women's water polo team returned from the Allegheny Championships this past weekend with a 2-1 record; defeating Indiana University of Pennsylvania, 17-6, and Penn State, 15-9.

Bucknell's only loss came against Salem-Teikyo, 12-6, with The Bison's third place finish qualifying them for the Eastern Championships at Princeton on Apr. 29-30.

In their first game against IUP, who was seeded sixth, the Bison played a very strong offensive game —leading 10-2 after only one quarter. IUP was unable to penetrate the Bison's press defense and this allowed for the team to work together as a unit to claim the victory.

Paige Cull '01, Brooke Rea '02 and Katie Stahler '03 each scored three goals and Adrienne Schober '02 had two goals, five assists and two steals.

"We played well together and our defense and offense worked well as a system to stop IUP," co-captain Emily McKnight '00 said.

The Bison were hoping that the third time would be a charm against Salem-Teikyo, as they had fallen to Salem in two previous match-ups this season. However, after Salem jumped to an early lead 3-1 in the first quarter, the Bison became a bit shell-shocked.

In the second quarter, the Bison stepped up their defense and held Salem to only one goal. But after halftime, the Bison again let down their guard and allowed Salem four goals in the third quarter. Salem played effective defense that didn't allow the Bison's offensive sets any opportunities. Although the Bison managed to hang on to the ball in the outset, too many key turnovers led to a disastrous result.

Schober had two goals, one assist and four steals; Cull had one goal and three steals; and Julie McLaughlin '01, Katie Stahler '03 and Brooke Rea '02 each scored as well. Senior co-captain Kristin D'Agostino had an outstanding 15 saves in the game.

"I felt we played a very good game against Salem and played them better than we had in our prior two meetings," Zeigler said. "Early on we did not capitalize on opportunities to score that would have kept the game closer and given us a chance to win. Salem came out shooting and put up an incredible number of shots. They played a very good game from start to finish. That was by far the best I had seen them play this season."

In the final game of the weekend—with an Easterns' bid on the line—the Bison charged into the pool and dominated against the Nittany Lions. The defense shut out Penn State in the first quarter and, with a pair of goals from Cull, the Bison led 4-0 going into the second quarter. In the second quarter, the offense continued its strong play and outscored Penn State 6-1, giving the Orange and Blue a 10-1 lead at the half.

In the first two quarters, D'Agostino had 10 saves, allowing only the one goal. She played through the third quarter, allowing only four total goals, while grabbing 13 saves. This allowed Zeigler to give the entire team an opportunity to play.

Allison Hernandez '01, DeAnn Long '01 and Dana Clarke '03 each had a goal. Cull finished with four goals, one assist and three steals, while Rea had three goals.

"Although the team was very upset to not make to the championship game, that did not stop them from preparing for this third place game just a few hours later," Zeigler said. "We knew an Easterns bid was on the line and the team responded by coming out blazing against a team we have played twice with only one- and two-point close victories. We pressed Penn State all over the pool and forced turnovers, which led to counterattack goals."

The Bison are seeded 9th in the Eastern Tournament and are looking to place even higher than that. They hope to bring together all of their skills and play as a team for all four quarters.

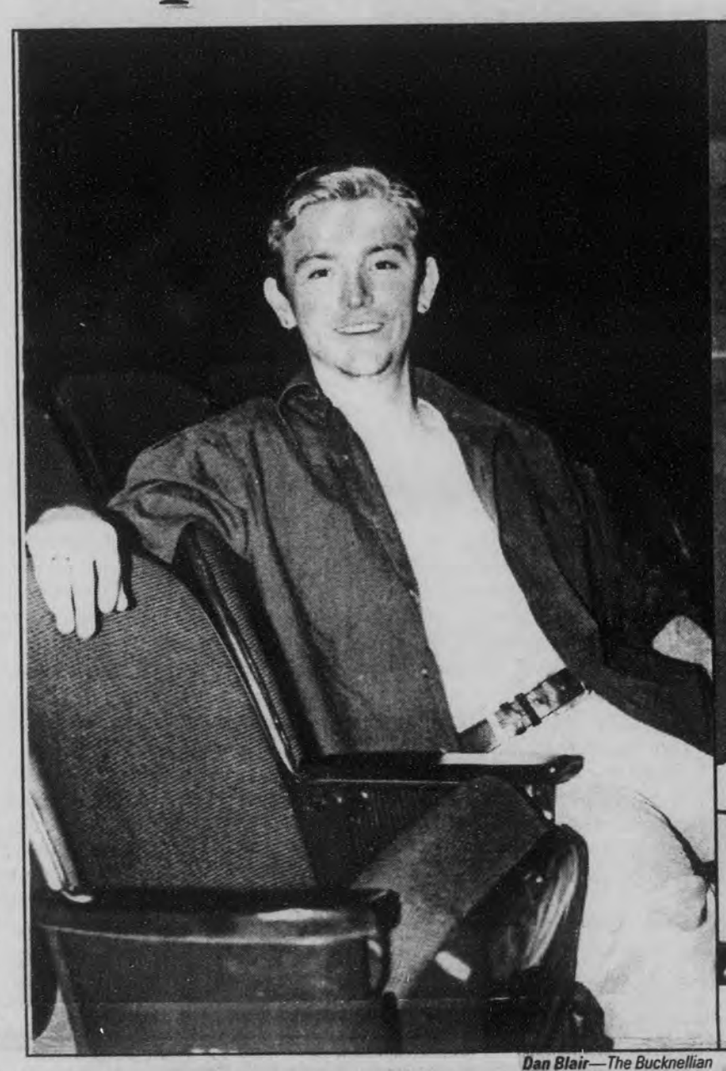
People of the Year

David Carpenter '00

Taking a stand, making a difference

By Rebecca Rowland



Dan Blair—The Bucknellian

Life at Bucknell has not always been easy for David Carpenter; in fact, life in general has not always been easy for David Carpenter. But as the old saying goes, good things don't always come cheap and for Carpenter, *The Bucknellian*'s Person of the Year, the price was worth paying.

"I've had an up and down time here over the last four years ... I've had some really difficult times at this school but I stuck through it," Carpenter said. "After four years of being all over the place, to see that you at least had some impact on the activities you have done is gratifying," Carpenter said.

Carpenter has indeed been "all over the place." Not one to sit back and wait for opportunity to come to him, Carpenter has made a concerted effort to become involved in activities that interest him from the moment he stepped onto campus four years ago.

One such activity is the theatre department. Carpenter has been a driving force in the department his entire college career, participating in almost every aspect of production from light design to directing to acting.

"The first thing I ever did in the theatre department was light board operator for a Tustin Theater benefit; it kind of snowballed from there," Carpenter said. "I walk on campus in the fall and I am in rehearsal usually until I get out."

Through his work with the theatre department, Carpenter has made connections that allowed him to pursue his love of theater professionally. After graduation Carpenter will move to New York City and work as an assistant to the artistic director of a theater company.

"All of the people who were in the first show I ever did here were alums and a woman who was in that show is a very close friend of mine who graduated in '77 by the name of Kathleen Kennedy ... Her writing partner is the assistant director of a theater in Massachusetts called the Miniature Theater of Chester where I worked last summer. There I worked with the artistic director of this theater in New York and when I called and said I was looking for a job, he told me to apply with his company."

To have already secured a job—a "dream job" to quote Carpenter—for after graduation is a testament to Carpenter's drive and ambition. He is quick to credit his education, both within the theatre department and without, as the key factor in his success.

"You have the opportunity here to do as much as you possibly want to ... you're not put into a track and told 'all you are going to do is act, all you are going to do is direct,' they give you the opportunity here to learn as much as you possibly can," Carpenter said.

Not nationally known for its theatre department, one wonders why a person

Allen Schweinsberg

Filling a crucial void

By Peter Van Emburgh

Dan Blair—The Bucknellian

When longtime Math professor Allen Schweinsberg accepted the one-year position of Interim Dean of Students, he was immediately placed in an unfamiliar setting within the University administration without any prior student affairs background. Instead of feeling like a 30-year tenured professor who is accustomed to the University, Schweinsberg felt more like a first-year student.

By filling in this position, Schweinsbreg continued to contribute to University service during the year which he had been scheduled to take a professional sabbatical.

"The challenge over the past year has been one of learning how to fit this position with no background in student affairs in such a way as to be useful to the other Deans," Schweinsberg said. "And maybe my greatest accomplishment is that they all still speak to me."

Following the abrupt departure of former Dean of Students Richard Chapman last summer, President Adams approached Schweinsberg one day and offered him the interim position.

"I felt an obligation to consider the office seriously," Schweinsberg said. "I felt that if Bro thought I could do the job and wanted me to do the job, then I ought to consider the offer."

His wife, Joanne Schweinsberg, also a math professor at the University, was shocked at Adams' proposition. "I would say that I was surprised when Allen was asked to be Dean of Students and absolutely shocked when he agreed," she said. "But Allen has some qualities that served him very well in this capacity—his sense of honesty and fairness as well as his overall sense of what is right and wrong."

The transition into the Dean's Office was relatively easy, according to Schweinsberg. "This crew of Associate Deans is [comprised of] experts in their areas, and that has made it relatively manageable for someone without a background in student affairs to come in and be an Interim Dean," Schweinsberg said. "There are very few instances where I can take personal credit—this is a real team operation."

However, a major challenge awaited for Dean Schweinsberg as the students arrived to campus in August.

Tower House, formerly the Tau Kappa Epsilon fraternity house, was renovated over the summer to accommodate the overcrowding of the dormitories. However, the house was "not in the perfect state of readiness," Schweinsberg commented.

According to Schweinsberg, many of the complaints were legitimate, but most of the complaints were solved simply with patience

see DEAN, page 2

BSG proposes bold measures

By Katie Marston

How can we get cable TV and extra reading days? Who found the trustees to help fund our new athletic facility? Ever wonder what exactly the Bucknell Student Government (BSG) does?

As president Chris Bouchoux explains, the members of the BSG, are continuously "working on the quality of life for the student body." This semester has indeed produced many new obstacles with decisions to be made by representatives of the student body.

Following student suggestions, BSG has extended library hours until 2 am, a change which will be implemented next semester. They have also presented a proposal to add an extra reading day into the period between the end of classes and final exams.

Dan Blair—The Bucknellian

Chris Bouchoux '01 and the rest of BSG have initiated several programs aimed at fulfilling students needs.

Although they have found that many other of the University's competitors have at least two reading days, faculty opposition has delayed the final decision.

Another major accomplishment of the BSG was facilitating the search process for a new University president. A Student Advisory Committee of 14 members interviewed the several candidates and decided on Dr. Rogers, agreeing with the University administration. Bouchoux hopes to continue the meetings of this group to share ideas and help represent the student body in University decisions.

In order to make themselves accessible to all student needs, BSG has open-group discussions with a diversity panel. Comprising of an international student, an Af-

see BSG, page 3

Candidates gear up for class elections

By Rachel Laskow

In the past, the Bucknell Student Government (BSG) has succeeded in getting more athletic equipment in the weight room and an extension of library hours, especially during finals time. BSG also helped in the recent presidential search, ultimately helping to choose Dr. Steffen Rogers as the University's fifteenth president.

Currently, BSG is working to get cable into the dorms, an extra reading day or two before exams, and a shuttle to operate around campus. These accomplishments could not have been made without the help of the class officers and congress, which as a whole compose the congress of BSG.

President Chris Bouchoux '01, Vice President of Operations Marsh Lewis '02, Vice President of Finance Nathan Sorber '02, and Vice President of Administration Nina Calo '02 serve as the executive board of BSG.

Lewis said, "Even though there is a growth of apathy on campus among students, BSG isn't just an idea. BSG doesn't just talk about ideas and debate them. It makes an effort to make intangible thoughts into tangible, concrete solutions."

On Monday, May 1 students will have a chance to vote for class officers and congress of their respective class for the 2000-2001 school year. The voting will take place online until midnight and the results will be announced the following day. For each class, a president (some jobs include running meeting and planning class events such senior nights), vice president (assists the president), secretary/treasurer (controls the finances of activities and takes minutes at meetings), and eight congress members will be elected.

Any student on campus can run for an office or congress position. Also, if a student wishes, he or she may run for both an office and a congress position.

If he/she is not elected into an office, he/she can still be elected as a congress member. Students were allowed to sign up to run until 6 p.m. on April 24. Campaigning for all positions begins this week and

Good Luck to the Class of 2000!

CARPENTER from page 1

who has wanted to work in theater since he was a young child would come to the University. When posed this question, Carpenter again demonstrates the foresight and maturity that have become his calling card.

"Versus someone who is in a bachelor's of fine arts program, we get a much more well-rounded education with a liberal arts degree," Carpenter said. "You give up the advantages of going to a strictly acting school to become an educated person."

Courtesy of David Carpenter

A large visiual reminder of the gay presence on campus, Carpenter's rainbow flag hangs behind him in his apartment window; Carpenter's junior year roommate calls the flag "more of an expression than a statement."

Carpenter has been involved with Cocktails, the student-directed plays, Company, the student run theater group and several showcases and dance recitals since his freshman year. It is his belief that one can't be a good actor or director without knowing about every aspect of the theater and has spent his years at the University living that belief.

"David has been immensely influential in the dance and theatre departments," Danna Frangione said. Frangione is an associate professor of dance at the University and Carpenter's self-declared mentor. "He has provided an energy and leadership to the programs—he is one of the few students that cross between theatre and dance. He is very collabritive with other artists."

To find someone with such passion is rare; to find him at Bucknell is even rarer. In a campus filled with apathy and lacking a strong sense of school unity, Carpenter has distinguished himself as a student who is willing to throw himself whole-heartedly into whatever he does and to stand up for his beliefs. He has gotten a lot of practice in the latter.

Courtesy of David Carpenter

Carpenter poses with the cast of "The Real Inspector Hound;" Carpenter has been a driving force in the theater department since his freshman year, contributing to almost every show either technically or creatively.

In addition to his work in the theatre department, Carpenter has dedicated a large portion of his time to Friends of Lesbians, Gays and Bisexuals (FLAG&B). Carpenter has been openly homosexual since his freshman year and, with the help of several other students, slowly built up awareness and acceptance of the gay community on campus through FLAG & B.

"We've taken an organization that was basically dead and built into something that was very powerful in campus, we just powerhoused our way through the University," Carpenter said. "We have shown people that if there is something you want to happen this University provides the opportunity to go ahead and make it happen."

This simple explanation drastically underscores just how difficult a task this was for Carpenter. In the Feb. 9, 1998 issue of *The Bucknellian*, a sophomore David Carpenter wrote an editorial entitled "Getting out of the Bucknell Closet: A Personal Narrative." No one who has never been in this position can recognize the courage it took for him to write this piece.

"[Freshman year,] I was in a new and frightening environment. I was living with this strange person, and good god, what if he found out I was gay? Would he kill me?" Carpenter wrote. "I was out just weeks before in a comfortable safe environment and now I was thrust back into the closet ... for the second time in my life, I began to seriously think about suicide."

"David was always very concerned with what people thought about him and he was always very concerned about others," remembers his freshman roommate Chris Ellis. "I admire him; he took what was certainly an awkward situation and actively took steps to make it better."

When asked about his feelings at that time, Carpenter doesn't dwell on the negatives. "Freshman year was very difficult in terms of being out," Carpenter concedes, but he immediately points out that "in FLAG & B you had people whom were willing to be openly gay in the face of a conservative, unsupportive student body. It is much easier now being out then it was then four years ago. I have a lot of hope for this school."

Indeed, Carpenter strongly believes that University students are not as conservative as they are thought to be and that, for a student desiring to lead an alternative lifestyle, this campus isn't all that bad.

Carpenter lives in the large gray house on the corner of Market and N. Seventh Sts.—the one with the big rainbow flag in the window. It seems that that flag embodies his entire philosophy on life.

"David hung that flag as an expression, he didn't really mean for it to be a statement," Kristin Colyer '99 said, his junior year roommate. "When some people in town didn't like it, David stood firm ... It takes a lot of courage to be willing to be a presence in town and on campus."

Carpenter and Colyer met in Carpenter's sophomore year when he was chosen to be the Junior Fellow for Social Justice. Colyer remembers that "people liked David; people who you would think would be the last people on earth to hang out with a 'gay guy' would come to our house. It was great."

David Carpenter has proved to be instrumental in both the furthering of the theatre department and the resurrecting of FLAG & B. His enthusiasm and leadership have taken him beyond the level of mere student and allowed him to be a newsmaker; a person who influences what happens here at the University. It is for these reasons that he has been chosen to be the Person of the Year.

Carpenter is a role model, and not only to homosexual students, but to anyone who needs proof that hard work and dedication are rewarding—it is a role he gladly accepts.

"I think we do have to accept a little responsibility," Carpenter said. "We've done a lot and it is rewarding to know that it has benefited."

"David is a wonderful role model," Frangione said. "My 13 year old son adores him. David shares his plays with him, has helped him to find literature he wouldn't normally be exposed to, looks at poetry with him ... he is wonderful."

This is the greatest compliment of all. It takes a lot to be an influential student but, it takes so much more to be an influential person—Carpenter has shown he can be both.

DEAN from page 1

and the cooperation of Physical Plant, the Office of Housing and Residential Life, and the administration.

Courtesy of Allen Schweinsberg

"I am very proud of my family," Interim Dean of Students Schweinsberg said. From left to right: Aaron, Schweinsberg, his wife Joanne (also a University math professor) and Jason.

"When I went up to the Tower House one afternoon, I was delighted with the way that the residents received me. I thought that they articulated their positions very clearly and eventually we got things worked out to most of the student's satisfaction," Schweinsberg said.

Not too long after the Tower House situation was settled did Schweinsberg face possibly the most difficult challenge of his tenure.

The September flash flood that ripped through the downhill portion campus and the downtown area of the St. Catherine's and 6th Streets was the worst flood to hit Lewisburg since the 1970s. Cars were destroyed and houses were left uninhabitable, leaving many students without access to food, a place to stay and in a very uncomfortable, shocked situation.

"There was a lot of communication back and forth between Public Safety, Dining Services, Vice President Charlie Pollock, myself, the other Deans and The Office of Housing and Residential Life," Schweinsberg said. "It was a difficult issue because the flood was so unusual—we had victims, but nobody was at fault."

Courtesy of Allen Schweinsberg

Taking advantage of the beautiful weather in 1977, Schweinsberg is shown here with one of his math classes. Schweinsberg has taught math for 30 years.

Schweinsberg worked tirelessly to solve the students' problems and he noted the difficulty in telling a student or his or her parents that their possessions could not be replaced.

"Perhaps what impressed me most [about Schweinsberg] is his sensitivity to students' needs and the lengths to which he'll go to solve a student's problem," said Charlie Pollock, interim vice president of student affairs. "I suspect this makes him a great teacher—as well as a great dean."

Schweinsberg experienced a critical issue from a new, administrative perspective—alcohol abuse. One of Schweinsberg's tangible accomplishments is the reassessment of President Adams' ten Point Plan to Reduce Alcohol Abuse.

"I don't think I understood until this year that this is a serious problem—it probably never even occurred to me to ask. It is a problem," he said. "I'll never look out in a classroom again and see empty seats and have the same feeling—one of the things that concerns me this year is the effect of alcohol abuse on other students—secondary effects."

Assistant Dean of Students Roy Baker applauded Schweinsberg's efforts in handling alcohol abuse and Greek life this past year.

"When Dean Schweinsberg returns from his sabbatical, I am going to make sure he becomes a University Advisor for one of our fraternities or sororities. He was also recently honored by the Greek community by being named the recipient of the Gary A. Sojka Leadership Award," Baker said.

Under Schweinsberg's leadership and assistance, the number of disciplinary incidents involving alcohol has decreased by approximately 20 percent this year.

Dr. Allen Schweinsberg arrived to the University in 1969, hired as an assistant professor of math. He received his BA, MS and Ph.D. from the University of Pittsburgh prior to arriving to campus.

Schweinsberg's only other administrative position was a one-year position as associate dean of the faculty.

He also participated in the faculty exchange one year, spending time as a professor at Trinity University in San Antonio, Tx.

When asked what the difference between his two administrative jobs during his career at the University, Schweinsberg replied, "This has been more difficult and stressful, partly because I had no background in student affairs, but also because a good deal of this job deals with handling crisis or "unhappy" situations."

"I've really enjoyed the excitement of sitting myself down in the midst of new colleagues with a totally new set of job responsibilities," Schweinsberg said. "I find it initially relaxing to set aside all of my mathematics and have an entirely new set of responsibilities and tasks thrown at me."

His colleagues have appreciated and praised his efforts of the past year.

Courtesy of Allen Schweinsberg

Shown here in a L'Agenda yearbook photo in 1969, Schweinsberg's first year as an assistant math professor.

"He has taken care to gather information where he needed it, he has struggled with difficult situations, lost sleep many times and remained the even-tempered, measured and dependable colleague I've known for over twenty years at Bucknell," Dean Ruth Burnham said.

Pollock said, "I'm extremely grateful for the opportunity to have worked with him this year, and for the wisdom he brought to the administration of student affairs."

After Schweinsberg hands the torch over to incoming Dean of Students Richard Ferraro this summer, he will look forward to his full-year professional sabbatical pursuing mathematical interests. Certainly, he looks forward to returning to the classroom the following year.

"I've often said to people that the job is like cold water in the face—sometimes it's painful, sometimes it's refreshing," Schweinsberg said.

Still, he remains modest about his yearlong accomplishments. "I think I've done my best to maintain a good office and collegial atmosphere," he said. "If most of the campus hasn't noticed that Bucknell has gotten by with an interim Dean, that is accomplishment enough."

The Bucknellian sees major changes ahead

By Brian Watson

Following another successful semester, *The Bucknellian* staff will see some major changes for the fall term. With the introduction of a new section and a restructuring of the editorial board, *The Bucknellian* will begin a new period of growth.

Along with some structural changes within the editorial staff, *The Bucknellian* will move away from its former procedures and begin saving each week's final copy electronically, cutting down on the technical problems experienced in the beginning of the spring semester.

Brian Watson '01 will return as editor-in-chief and will be joined by Heather Napolitano '01, who returns from a semester abroad.

Current managing editor Matt Albert will assume the newly created role of designing editor, becoming the supervisor of all layout and special design projects. Science and technology co-editor Matthew Trunnell will serve as managing editor for the fall semester.

Business manager Carolyn Moser '01 will return for the fall, and will assistant business manager Mark Langer '02, who also serves as the paper's production manager.

Peter Van Emburgh '02 will continue as news editor, sharing editorial responsibilities with current features editor Rebecca Rowland '02. Monica Montgomery '01, Trunnell's co-editor in science and technology, will move over to become news layout editor.

Kristen Jancuk '02 and Maureen Fick '02 will return as co-editors of the opinion section.

Assistant news editor Jim Leahy '03 will shift over to become features co-editor along with Katie Hays '03, a new addition to the editorial staff.

Jennie Scheerer '02 will stay on as arts and entertainment editor, and will be joined by new layout editor Natalie Casp '02.

Kate Nowak '01 returns from a semester abroad to resume her former role as science and technology editor. Features layout editor Alison Karbonik '02 will assume layout responsibilities for S&T.

Brooke Rea '02 joins the staff as sports co-editor, joining veteran Carmen Mauriello '02.

Adam Haas '01 and Jaime Troxell '02 will stay on as sports layout editors.

Matt Herbert '02 will return for his second semester as statistician.

For The Bucknellian's new Business and Politics section, sports editor and contributing editor Tim Scheu '01 will handle editing responsibilities.

Paige Cull '01 will continue as photo editor.

Kassie Bernard '03 will return for her second semester as national advertising representative, while Tim Choate '01 will welcome back Julie McLaughlin '01 to assist him with local advertising.

Chris Pizzo '01 and Scott Solomon '03 will serve as darkroom managers.

Kim Luedee '01 will remain as head copy editor.

Derrek Metz '02 will return as *The Bucknellian*'s circulation manager.

James Lee will return for his fifth year as adviser to *The Bucknellian*.

Despite the numerous additions, the editorial staff will lose several veterans.

Former editors-in-chief Chris Ellis '00 and Jared Silliker '00 will graduate, as will A&E layout editor Lindsay Gash '00 and the do-it-all Jonah Half '00.

Public Safety Log

April 19, 2000

INFORMATION/VEHICLE IMMOBILIZED—Public Safety immobilized a student's vehicle for numerous parking violations and violations of the state vehicle code.

April 21, 2000

UNDERAGE CONSUMPTION—While on routine patrol, Public Safety observed a female vomiting on 7th St. The individual was later identified as a student under the age of 21 years and intoxicated. Citations were issued for underage drinking and public drunkenness.

FIRE/ACCIDENTAL BURNING—Public Safety responded to Sigma Chi Fraternity for a fire alarm activation caused by a candle igniting a bed sheet. Public Safety extinguished the fire. The incident is under investigation.

MISSING PROPERTY—Public Safety responded to Leiser House for the report of five knives removed from the kitchen. The incident is under investigation.

April 22, 2000

INFORMATION—Public Safety responded to Larison Hall for the report of two males allegedly placing what appeared to be a gun into a bag. Lewisburg Police was notified. A witness was located in a search of the area. The incident was investigated and determined unconfirmed.

April 23, 2000

SIMPLE ASSAULT—A University student reported to Public Safety that an ex-boyfriend struck her on the head while she was at Phi Psi Fraternity. East Buffalo Township Police was contacted. The incident is under investigation.

BURGLARY—A University student reported to Public Safety that unknown person(s) did remove a wallet, $60, a Nintendo game system and a Sega game system from his unlocked room in Bucknell West Mod 5. East Buffalo Township Police was contacted. The incident is under investigation.

BURGLARY—A University student reported to Public Safety that unknown person(s) removed one laptop computer and 73 CD's from her unlocked room in Bucknell West Mod 25. East Buffalo Township Police was contacted. The incident is under investigation.

April 24, 2000

THEFT—A University employee reported to Public Safety that unknown person(s) removed a digital balance scale from Carnegie Building Room 13. The incident is under investigation.

BURGLARY—A University student reported to Public Safety that unknown person(s) removed a Playstation and five video games from his unlocked room at Bucknell West Mod 16. East Buffalo Township Police was contacted. The incident is under investigation.

THEFT—A University student reported to Public Safety that unknown person(s) removed 50 compact discs from Roberts Hall WVBU radio station room. The incident is under investigation.

April 25, 2000

HARASSMENT BY COMMUNICATION—Public Safety responded to a Bucknell West Mod for the report of a student receiving harassing phone calls. The incident is under investigation.

Pollock excels in student affairs

A University graduate, serving as Bro's "right-hand-man," makes strong contribution

By Laura Day

Everyday we walk across campus going about our business as usual. However, we seldom stop to think, nonetheless thank, the people who have made the University the wonderful place it is today.

One of those people is Charles Pollock.

A 1970 graduate and enthusiast, Pollock returned to the University in 1998 as adviser to the president and secretary of the University, and currently serves as the Interim Vice President of Student Affairs.

Most certainly a personable and well-rounded individual, Pollock is a man every student should have the opportunity to meet.

Pollock is probably best classified as the president's "right hand man." "That is how my original position here was envisioned," Pollock said.

Despite his change in title, many of the duties of his two positions at Bucknell have overlapped, with his job as secretary of the University remaining constant.

Pollock acts as a liaison between the president's office and the Board of Trustees. Additionally, he is directly involved in student affairs, chaplency issues, athletics and various other topics. He is an unbelievable information resource and consultant for the president.

On a daily basis, Pollock is turned to for help on a variety of issues. On-going projects include working with Dean Schweinsberg on the University's Ten Point Plan, continuing Greek Strategic Planning with Dean Baker and overseeing the University's Task Force on Residential Life.

No matter what aspect of student life he is dealing with, Pollock explained that he is "always looking at the big picture, not solely one particular area."

Pollock is also actively involved in "town-gown" relations and serves on various committees devoted to the issue.

One such committee is the Lewisburg Downtown Partnership; through this organization he strives to ensure the future of downtown Lewisburg, both economically and structurally.

Working in conjunction with the Responsible Housing Committee, Pollock is also trying to encourage more activism from Lewisburg landlords and responsible relationships with tenants.

According to Pollock, one major purpose of his work is to "open up as many channels of communication between Lewisburg residents and the University as possible."

Campus athletics is another area in which Pollock is involved. Dealing with issues such as gender equity, overseeing the department of athletics and continuing plans for the new facilities occupy a portion of Pollock's time.

Pollock also played an integral part in the selection process for the new director of athletics and dean of students.

In referring to the outcome of both searches for these two positions, Pollock said, "I am very happy with the results of both searches. They are two excellent people to join our community."

Many changes in leadership are occurring on campus this year. President William "Bro" Adams will be leaving after this year to take office at Colby College in Maine. Dr. Steffen Rogers will be his successor and Pollock may be the "right hand man" of a new legacy at Bucknell.

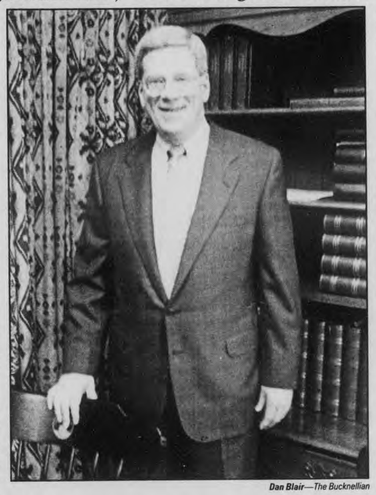
"If Bro felt this was good timing for the institution and for himself to make an administrative change, then it was in fact so," Pollock said.

Pollock is thrilled at the progress the University has made in recent years. "The public profile of Bucknell is the best it's ever been, and this is a great time of opportunity for all of us," Pollock said.

In the midst of such growth and prosperity, Pollock still works to improve some of the weaker facets of student life. He feels that the principle constraint is the dominance of alcohol on campus and is actively working to solve this problem.

Pollock does not want to eliminate alcohol on campus, merely keep it in perspective. By "enriching the student culture and making it multidimensional" through alternative programs and activities, students will be even more well rounded and educated, he said.

Overall, Pollock has thoroughly enjoyed his time at the University and feels that "it has been a great year." He has great hopes for the University's future, and is pleased to say that "Bro will leave Bucknell a provably better place than he found it."



Dan Blair—The Bucknellian

Charles Pollock '70 serves as interim vice president of student affairs.

News Briefs

Supreme Court Hears Gay Boy Scout Troop Leader Case

In 1990, James Dale lost his bid to become a Boy Scouts troop leader and was fired from the hallowed American institution because he is gay.

On Wednesday, the last day for arguments this term, the U.S. Supreme Court hears the case Dale brought against the Boy Scouts in 1992 and won in the New Jersey Supreme Court.

The high court will decide whether the Boy Scouts of America can continue to exclude gays as troop leaders. In essence, the justices must decide if an organization so inclusive that it has millions of members, may be exclusive when it chooses to be.

The Supreme Court could use this case to decide the broader issue of whether the Boy Scouts can prevent gays from becoming Scout members.

The justices agreed to review the state supreme court ruling that Dale's dismissal was illegal under New Jersey's anti-discrimination law.

D.C. Police Want to Change Teen Suspect in Zoo Shooting as Adult

A 16-year-old male is set to be arraigned Wednesday in connection with the National Zoo shootings that left seven youths wounded, including one boy who was in critical condition with a brain injury.

The teen-ager was taken into custody Tuesday at the home of a relative in northeast Washington, Assistant Police Chief Terrance Gainer said.

Police did not identify the suspect because of his age. He was initially charged with assault with intent to kill. "We're going to attempt to charge him as an adult for the assault," said Pete Newsham, police Second District commander.

Newsham said investigators had worked 24 hours checking leads in the case. "We were fortunate in that it all came down to one suspect," he said. "We have one shooter, and all indications is that there was one weapon."

Police said that when they arrived at the residence with an arrest warrant and a search warrant, they found the suspect in the basement, hiding behind a heater. He offered no resistance, police said. Officers also recovered a shotgun.

Officials had said the weapon used in the shootings was most likely a 9 mm handgun, but none was found near the suspect.

Russian Foreign Minister Restates Opposition to US Missile Defense System

Russian Foreign Minister Igor Ivanov on Tuesday reaffirmed his country's steadfast opposition to changes in the 1972 Anti-Ballistic Missile Treaty.

Washington has indicated it may ask Russia to amend the treaty if it goes ahead with a proposed national missile defense system, which the United States says would counter threats from nations such as North Korea, Iran and Iraq.

The ABM Treaty limits the scope of anti-missile systems on the assumption that if the United States and Russia knew that they could not defend themselves against nuclear attack, neither nation would make such an attack on the other.

In a speech to the conference on the Nuclear Nonproliferation Treaty at the United Nations, Ivanov said Russia would only consider further reductions in strategic offensive weapons if the ABM treaty were preserved without modifications.

Earlier this month, Russia's Duma approved the Strategic Arms Reduction Treaty II, which cleared the way for scrapping thousands of U.S. and Russian nuclear warheads. Talks on a new START III arms control treaty between Russia and the United States have already begun.

Letter to the University

Candles/Fire Extinguishers

To All Students:

As you may have heard, there was a small fire at the Sigma Chi chapter house early Friday morning. Damage was minimal and thankfully no one was injured. This fire could have been much worse, however, since two fire extinguishers in the house had previously discharged and were not working.

The fire was a result of a burning candle, and it underscores why the University prohibits candles in residential facilities. So I remind each of you that candles are strictly prohibited in all residential halls and fraternity houses, including non-University owned fraternity houses.

This event also underscores why the University takes so seriously the misuse of fire extinguishers. An extinguisher that is used inappropriately is not ready in the event of an emergency.

In light of recent fires at other colleges and universities, your cooperation in this matter and support of this policy will be greatly appreciated.

Allen Schweinsberg
Interim Dean of Students

This Week in Bucknellian Headline History

Bucknell Wins Great 13 Inning Game from Yale

April 25, 1910

Bucknell 5-Yale 3 was the score of the greatest baseball victory in the history of Bucknell. That the Orange and Blue men should be victorious when they faced their great opponent in the big thirteen-inning battle at New Haven, Wednesday afternoon, was unthought of, even by some members of the team. True, the locals had tied Cornell, but yet Yale defeated Cornell and Pennsylvania also, thereby making herself practically the baseball leader of the "Big Six." Bucknell, however, pluckily, met the victorious Yale nine on the latter's own grounds and defeated them before a crowd of nearly three thousand Yale rooters.

The victory of the local nine would have been even more decisive, had it not been for a little stage fright in the early part of the game, when Yale was allowed to secure three runs. When the Bucknell men settled down and began to play in their old time form, they gave one of the greatest exhibitions of ball playing that have ever been seen on the Yale diamond.

New Penitentiary to be Good Field for Sociologists

April 22, 1932

That a spirit of cooperation and friendly relationship will exist between Bucknell and the new Northeastern Federal Penitentiary on the outskirts of Lewisburg was indicated here today when Professor R.L. Sutherland, head of the department of sociology, made the statement that next year's sociology classes will do research work at the prison.

The penal institution will be operating by September. Authorities at Washington are planning to establish a guard school of instruction for the training of prison guards and keepers at the penitentiary. Permission has been given by President Homer P. Rainey to use various classrooms on the Hill during Summer School for these instruction purposes.

The authorities in turn have extended the use of the new institution for research work in sociology to Bucknell students. Professor Sutherland plans to have his criminology and advanced sociology students do considerable individual case-history work at the penitentiary, as well as to study actual penal conditions, in what is termed "the most modernly scientific and up-to-the-minute prison in the world."

Renovation of Davis to Commence Soon; Will Serve as Chapel

May 5, 1955

Construction of a second unit at Davis Gymnasium to provide expanded facilities for physical education and to afford, for the time being, a place for chapel services on the campus, will get under way shortly.

The new unit, to be built at the rear of the present central unit, as indicated in the architect's original plans for the gymnasium, will be 130 feet long and 60 feet wide. It will be constructed of concrete blocks and will have a brick facing to match the central unit.

Work on the building will begin before June 1 and is scheduled for completion by the opening of college in the fall.

The new gymnasium unit will have a seating capacity of approximately 800 persons. Use of removable chairs will enable the University to hold its regular weekly chapel in the structure without interfering with its use for physical education purposes, it was pointed out.

Wrestling, boxing, and indoor tennis are among the sports that will be accommodated in the unit that will provide an enclosed handball court.

Mascot Heads Returned

April 29, 1994

The heads of Bucky and Becky have been located and returned to their homes after a weeklong Bison hunt by public safety officers.

Though the expensive mascot heads were in good condition when they were found, Bucky did sustain minor injuries to his horns. The horns had been pushed down from their upright pointed position. Beth Engleman, cheerleading coach and secretary of the finance department, said that Bucky's horns had been intentionally damaged, and that the cost to repair or replace the horns would be "several hundred dollars."

Fortunately, there was "no facial damage" done to Bucky or Becky, said Engleman, because such damage is not as easily repaired.

An anonymous phone call on Saturday morning put an end to the headhunt. Public safety dispatch Brad Miller received an anonymous phone call at 2 a.m. Saturday from a male individual saying that he had taken Becky and Bucky's heads, and that they could be found in plastic bags behind the Sigma Phi Epsilon (SPE) house. Public Safety officers Donald Mull and Wayne Slear recovered the heads and pair of hands.

Lieutenant James Middleton from the Public Safety office said that the investigation into the thefts has been closed because the 'Missing' flyers posted around campus stated that if the heads were returned undamaged, no further inquiry would be made into the thefts.

ELECTIONS from page 1

students may not spend more than $20 and must keep their receipts.

"The best way is to get your name out and face out there," Lewis said.

Currently, Jessica Jackley '00, Alex Russell '01, Aidan Campbell '02, and Laura Day '03 serve as president for their respective classes.

Both Russell and Day are running for president again, however, Campbell is not because he is going abroad.

"I have learned how hard it actually is to get things done here, how much time and energy needs to be spent to make sure that projects are completed," Campbell said.

"I've made a significant effort to get more people involved because it is their university," Russell said. "Junior year is difficult with students abroad. I've wanted to be senior class president since last year—it will be a year when everyone is here."

Day said, "I am running again for president of the Class of 2003 because I strongly believe that school spirit and class unity are vital aspects of college life. I have thoroughly enjoyed my first year as President and would like to continue planning events for our class and bringing the members of 2003 together via dances, charity efforts and activities."

"Our class governance has many goals for the upcoming year—we hope to do some more charity activities next year and we have also thrown around a variety of other ideas for outdoor bashes and dances," Day said. "Overall, our principle goal is to continue to provide fun, social activities for the class of 2003 which will unite the class and continue the spirit that is already so pervasive."

"I am excited that a lot of people are running. I hope all of the candidates are as committed as they are now," Bouchoux said.

BSG from page 1

rican-American, a homosexual, and the director of the Jewish campus organization, the group considers the special needs of these different life styles. Such suggestions as setting aside a prayer room for Muslim students and extra storage space for international students have been considered.

A major issue that the BSG has been seriously examining is the installment of cable television in campus dorm rooms—they have visited a CATV director in Danville and discussed costs with the Physical Plant. The Committee on Complimentary Activities (CCA) will be making a final decision next fall.

Although the cable wires have been laid, many members of the campus community feel cable to be contrary to the academic environment of the University. However, BSG has passed this decision with the belief that students can handle this outside distraction.

Recently, BSG has proposed an increase in the student activities fee. The extra fifty dollars has been passed by the student government and is being examined by the CCA and the planning and budgeting committee for the fall of 2001.

This addition is attributed to an increase in the student programming fee, Uptown funding, a reserve fund for new clubs, BSG's portion of the Chrysalis Ball and student funding of the new athletic facility.

The development office has explained that, by using student funds to help pay for the new facility, students will have a direct impact on the development of the building. These contributions will be acknowledged with a plaque dedicated to the classes of 2002 and 2003.

BSG President Chris Bouchoux '01 said that he and the rest of the members know that they were elected in order to get things done for the students. He encourages comments and suggestions, as well as outside student attendance at weekly BSG meetings. As Bouchoux explained, "Our goal is to represent and speak for the improved life of the entire student body."

EDITORIAL

Conquer and destroy?

The recent announcement of American University's move into the Patriot League has plenty of positive implications for both the school and the entire conference. Unfortunately, several American athletes, including one sophomore basketball player quoted in Tuesday's Washington Post claiming that no one will want to see an "American-Bucknell" basketball game, believe that the new conference offers nothing but an unnecessary step down for American University athletics.

On an academic level, American's inclusion in the Patriot League is anything but a setback. With a similar undergraduate profile to the University (despite a larger student body), American seems to be a perfect fit. In reality, its transition to the conference will only bolster the institution's academic reputation.

American University's inclusion to the Patriot League also, on some level at least, preserves the viability of the league itself. The Patriot League-with only seven full-time members-was in danger of losing its automatic bid to the NCAA men's and women's basketball tournaments, considerable national recognition and (as was speculation) Navy to Conference USA. By adding American, the Patriot League gives Navy a natural rival, provides the league valuable exposure in the DC metro area, and preserves the league in a time where movement among NCAA Division I Schools is prevalent. Simply because it was in danger of falling apart, the Patriot League felt a sense of urgency to expand by at least one member, and the inclusion of American-a school that fits the Patriot league 'mold' in many ways-reflects the league's need to expand and its desire to add schools which fit the league's academic profile.

But the addition of American comes with, it can be argued, a potentially serious cost. Two years ago, the League Presidents reluctantly approved a plan to allow Holy Cross to offer full basketball scholarships in men's and women's basketball (Lehigh later took advantage of the plan as well). Now American, which has offered scholarships in all sports while a member of Conference USA, will push the scholarship envelope even further. The Patriot League decided to allow American to continue giving scholarships in all sports, and will permit other league schools to follow suit.

The Patriot League_in some sense—has always offered some form of aid to athletes. Army and Navy give al students free education in exchange for military service, Lehigh and Holy Cross offer scholarship in basketball (Lehigh also gives them in the non-Patriot league sport of wrestling), and Colgate, Bucknell and Lafayette offer some preferential aid packages to athletes. But full scholarships in all sports? That's a realm through which the League has dared not venture.

But the days of the Patriot League being the only non-Ivy Division I conference to not offer scholarships has passed. The league cannot call itself a non-scholarship conference anymore, even if some schools choose not to offer scholarships. Bucknell has been traditionally steadfast in its desire to maintain a non-scholarship stance, and that position-at least in the near future-is likely to remain firm.

But the questions are now on the table? What will American's inclusion do to the competitive balance of the League? Should all Patriot League schools start offering athletic scholarships?

John Feinstein's soon-to-be-published book on Patriot League basketball examines what seems to be the last of a dying breed, "The Last Amateurs," as the author calls them. Will the publication signal the end of an era?

The Patriot League has stood tall throughout collegiate athletics' transition into big-money programs. Scholarships will not necessarily bring championship caliber athletics to the conference, so why should the Patriot League compromise its principles? While the chance to offer scholarships would certainly boost our own athletic program, the University and its fellow conference members should not abandon the strong principles it has strived on for so long.

Should the construction on Fraternity Road have been done over the summer?

Yes

By Ryan Delahanty

Our campus has been under construction for what seems like forever. The new dorm and the music building have destroyed Swartz field and made driving through the stadium parking lot next to impossible. While these changes are inconvenient, they are also time consuming and in order to have the buildings ready for use next year, their construction needed to begin.

What I find to be an annoyance that I cannot understand is the recent closings of Fraternity Road. For the past few weeks, all of Fraternity Rd. has been closed at one time or another. As of now, the portion of Seventh St. that meets Fraternity Rd. between Phi Psi and Roberts is closed and will be closed for the next three weeks.

The roads are closed because steam lines have to be laid connecting the new buildings to various physical plant buildings at the far end of campus. Yes, it is necessary for the lines to be laid and yes the only way to do that is to dig up the road but, did they have to do it now?

By laying the pipe a portion at a time the construction process is slowed. Wouldn't it have made more sense to wait until all students had left for summer break and dug up the road all at once and then laid the lines? Doing it this way would probably cut the work time in half on the project, therefore saving money for the University.

What used to be a two-second drive from downhill LC to the health center now takes many minutes since a driver must go through the Gateway parking lot, back on River Rd., up past the physical plant to get there. Complaining over a two-minute drive may sound petty but it's the principal of the thing - why couldn't the construction wait two more weeks and make things easier on everyone?

Once the portions of Fraternity Rd. that have had pipe laid below them are reopened, students run into another problem - potholes. The roads are patched with gravel and large rough spots are exposed. This is not good for cars and I am sure many a front end will be knocked out of alignment, not to mention that it is uncomfortable to drive on and unsightly to look at

The laying of the steam lines would have been better for everyone involved if the University had waited until the year was over.

No

By Rebecca Rowland

In order to get to the newspaper office today I had to drive a whole thirty seconds out of my way because I couldn't drive straight up Seventh St. Bummer. But, wait a second! I just remembered - I am not the only person that the University is worried about pleasing! No, there is a whole list of other people more important than I am who control decisions like when to lay steam pipe for the new dorm and new music building and if they decided to lay it now, than now it is.

Our campus is tiny - it barely even qualifies as a driving campus - so how can we get so upset when we are told that we won't be able to drive in a ten square foot area? There are other ways to get from across Fraternity Rd. or to the health center than Seventh St. In the all-campus email that was sent out these routes were mentioned: River Rd. goes to the Fraternity Rd. parking lot, the health center and even back by the observatory. So what's the problem?

While it is tempting to say that the University should have waited until school got out, maybe that just wasn't a viable option. Many maintenance jobs are done around campus in the summer like cleaning every building, landscaping, painting dorm rooms, washing furniture and carpets as well as adding or subtracting new equipment to classroom buildings. In order to do these, physical plant staff have to be able to drive directly up to where they are going and park their trucks full of equipment right in front of where they are working.

If Fraternity Rd. were to be closed while the physical plant staff was trying to do this, it would make their jobs a lot more difficult. Students can walk to the health center from the LC, therefore bypassing the construction at the Fraternity Rd./Seventh St. intersection. I find it hard to imagine University employees carrying power washers around campus.

Sure all of the construction has left Fraternity Rd. in bad shape and I'll agree that the blocked road is an inconvenience (albeit a small one) but it only lasted for about a month. When we return to the school in the fall all of the construction will be done, the roads will be repaired and we will have two more new beautiful buildings. The troubles we students has to go through were worth it.

Locking Horns

Letter to the Editor

We members of the BCEJ are writing both to thank *The Bucknellian* for its generous coverage of our effort to stop Bucknell from sending its anti-union letter to employees (in the April 13th edition of the paper), and also to clarify some things about our group's composition and structure. We sincerely appreciate the work of Brian and *The Bucknellian* to give us adequate space to address our concerns. However, we feel the collective nature of our group and student leadership in the group were underemphasized.

First, we meant for the following names to appear as signatories of the letter: Kristen Erickson, Brian Eyler, Dawn Lonsinger, Mike McCaffrey, Julie McLaughlin, Joell Molina, Saundra Morris, Karl Patten, Megan Rancier, Charles Sackrey and Andrew Taylor (Steering Committee, BCEJ).

We feel that group participation was minimized by the erasure of our signatures, and were frustrated not to be mentioned in connection with a venture in which we had played so large a role.

Second, under the photo of Professors Morris and Sackrey, it was stated that they "created the BCEJ." We feel it is necessary to correct this statement. In fact, several of the persons mentioned above had a crucial role in the group's formation. Before any real idea of The Bucknell Caucus for Economic Justice as an official group ever emerged, there was a core group of concerned individuals who were in dialogue with one another about economic justice issues at Bucknell and in the larger world. We eventually became the BCEJ through student initiative. Thus, Professors Morris and Sackrey neither "created" the group nor "head" it. We are a collective.

Finally, it is important to mention the student voices that contributed to the article. In addition to Morris and Sackrey, Dawn Lonsinger and Andrew Taylor were both interviewed, and none of their reflections were included. This was especially important since they, along with Kristen Erickson, were also present in the BCEJ meeting with Vice-President Plympton.

Again, thank you for your coverage, and for giving us this opportunity to clarify.

Sincerely,
The Bucknell Caucus
for Economic Justice

Your mission: get opinionated! Only four months to prepare. (jancuk@)

Practice what you preach

America belittles treaty creating potential for international crisis

By Gretchen Schrock

The expectation of progress in negotiations between the United States and Russia on the issue of nuclear arms reductions is quickly dissipating as the U.S. government falls deeper into the realms of hypocrisy and arrogance.

On April 22, the Russian parliament ratified, by a vote of 298 to 74, the Comprehensive Test Ban Treaty, which the U.S. Senate rejected last October after the Clinton administration strongly fought for its approval in 1996.

This major arms reduction accord calls for the halving of the American and Russian arsenals to no more than 3,500 warheads each and shows willingness on the part of the Russians to continue abiding by the 1972 Anti-Ballistic Missile (ABM) Treaty, something the U.S. completely lacks.

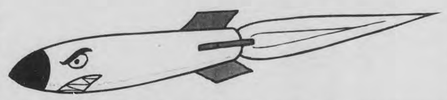
Numerous senators and the Clinton administration are clamoring for the creation of a national antimissile defense system, which is in violation of the ABM Treaty. The senators largely favor a "full, robust defense system" and some even want to forget the treaty, as if it is simply a nuisance hindering their political dreams.

The presidential Republican nominee, George W. Bush, has said that he would erect an antiballistic missile system "at the earliest possible date" and is willing to withdraw from the treaty if Russia refuses to agree to his terms.

How is Washington going to deal with the slight technicality of having to defy an international treaty? Simply amend the treaty. However, such an amendment would require Russian approval. Russians view the American need for a missile defense system as an over-exaggerated cover for its real designs to undermine the national strategic deterrent forces of Russia and China. Thus, the Russians are never going to agree to an amendment.

The U.S. government claims that it must protect its citizens from the threat of nuclear terror from such "rogue" states as North Korea, Iraq and Iran and the possibility of accidental launches.

"The American plans of a national missile defense is not perceived in Russia as something that is justified by the North Korean or Iranian nuclear programs," said Sergei Rogov, the director of the U.S. and Canada Institute.



If the U.S. does force Russia into amending the treaty, the government will face an international relations nightmare. Why should America be allowed to alter international treaties at will and yet that same privilege is denied other countries?

More than 150 states have signed the Test Ban treaty and more than 50 have ratified it, but until 44 nations specifically designated in the treaty have ratified it, it will not take effect. One of those countries that has yet to ratify is the U.S. How can the American government expect the nuclear arsenal to decrease or the testing of warheads to cease overseas if it is unwilling to ratify a treaty specifically designed to do that?

The administration denounces Pakistan and India for testing nuclear arms that may ignite a nuclear war but will not under any circumstances stop researching and testing of nuclear arms in its own country.

Furthermore, China has responded to the U.S. demands for a treaty amendment by vowing to expand its own nuclear arsenal. Russia has stated that the framework for the arms agreements would be destroyed by an American withdrawal from the accord.

It further warned that it would not only stop reducing its arsenal but may also deploy new multi-warhead missiles, abandon the agreement banning medium-range missiles and even withdraw from the accord limiting conventional arms on the European continent.

The potential for an international conflict is increasing thanks to the foolishness of the U.S. Senate and the White House. Those in favor of defying the ABM Treaty are creating world enemies by believing that since the U.S. is the sole superpower in this new international hierarchy, it should be able to do as it pleases.

American arrogance is already angering and alienating Europeans, what difference is it if the rest of the world is annoyed? The state of American leadership in the global political and economic scene is greater threatened by its own arrogance and hypocrisy than by any nuclear warhead deployed by a "rogue" state.

Summer jobs?

Rewarding employment hard to find

By Kristen Jancuk

As we all prepare to take leave of campus for a well-deserved summer vacation, deciding what to do with the months ahead can be exciting and challenging ... or it can be a rather large pain. While I'm sure some of you, especially seniors, are looking forward to well-paying jobs, internships and extended vacations in Nassau, many of us are not so lucky.

Being the diligent student that I am, I began planning my summer by looking for an internship. I discovered two things.

1. Even though there are 50 states and hundreds of thousands of college students in the U.S., decent internships can be found in only two locations: New York City and Washington D.C.

2. If you happen to find a semi-decent internship remotely close to you, it will require at least 40 hours of your week and pay you exactly zilch.

I understand that most internships are going to be in big cities and I'm willing to accept that, but this "unpaid internship" idea strikes me as, well, ludicrous. If I spend 40 hours or more of my time running around getting coffee and making photocopies for some creepy guy in a business suit the least the company could do is provide a stipend. A secretary does many of the same things, but makes $12 an hour!

So, to recap, in order to have the word "internship" appear on my resume, I have to give up eating and sleep in a cardboard box across the street because I can't afford to drive to work.

I gave up on the internship idea because I'm pretty fond of my health and I started looking for a regular job. Foiled again. I found out that not only am I in the wrong major but that the only people who will be working when they graduate are computer science and engineering majors. It seems that everyone else should practice saying "Would you like fries with that?"

I am, of course, exaggerating, but the point remains that the jobs available don't cover a broad range, especially temporary summer positions.

Finally, I thought that I could gain some office experience as a receptionist or a secretary; not as exciting as interning at the Washington Post but quite a few steps up from McDonald's. However, it appears that answering the phone is trickier than I thought. Every job description I read included the words "experience necessary." How can I possibly gain experience if you won't employee me? I can't be the only one who sees this contradiction.

It seems that all the effort we put in as students suddenly becomes insignificant when we begin the transition into the "real world." Why can't my 20-page paper on the Ecuadorian economy attest to my work ethic and research skills? I believe that the "real world" severely underestimates what college study requires of students and in turn, we are denied many opportunities to demonstrate what we have achieved.

So now, exhausted and frustrated by my job search, I will return once again this summer to making ice cream sundaes at the local Friendly's and trying not to attack the woman with four screaming, drooling children who insists that she always gets whipped cream on her milkshake and no one has ever charged her for it before. This is a fine example of my fine-tuned "people skills" but some how, I don't think the CEO critiquing my flimsy resume will see it that way.

FLAG&B's "tolerance" flows in one direction

By Michael Boland

Don't groups who are trying to elicit support for a political cause usually have their allies do something unusual as a means of voicing their support? I thought that was how it worked.

For example, when African-Americans fought for civil rights in the Deep South of the 1960's, they didn't just keep on going about their lives. They changed their patterns of behavior (i.e., they stopped riding buses in the city of Montgomery), and did something radical. That was what made people take notice.

This leads me to question why FLAG&B (Friends of Lesbians, Gays, and Bisexuals) chose "Jeans Day" as their means of protest.

Encouraging people to wear something that they were probably going to wear anyway does not exactly translate into a resounding chorus of campus-wide support for FLAG&B's agenda.

The attention afforded FLAG&B by Jeans Day and the article about it in last week's *Bucknellian* caught my eye. After reading the article, I believe that the alternative community here at Bucknell may misunderstand the nature of the resistance to its cause.

I also think that a group that pushes so hard for 'tolerance' and 'diversity' should, perhaps, be more careful in their characterization of those who disagree with them.

The manner in which supporters of traditional male/female relations are being portrayed seems paternalistic. I hope FLAG&B realizes that, fortunately, not every person who opposes 'gay rights' is the violent, ignorant sort (like Matthew Shepard's killers).

I am confident that most of the people whose minds FLAG&B is determined to change are nothing like that.

They are compassionate people whose moral opposition to homosexual conduct may be rooted not in blind fear or hatred, but rather in their personal convictions about right and wrong. They bear no ill will towards gays themselves, but they have a moral disapproval of their conduct.

There is a crucial distinction to be made between "notoriously conservative Bucknellians'" attitudes towards the gay person and their attitudes towards homosexual behavior in general. Though at times difficult, it is a distinction that can be made.

Unfortunately, I find that the homosexual community too often responds with a rhetorical broadsword, responding to any sort of opposition by chastising their opponents as "ignorant" or "bigoted." What kind of tolerance is it that flows in only one direction? Bucknellians' social conservatism is a choice; it's not a campus-wide syndrome that must be 'overcome.' To present it as such borders on intolerance.

When gay activists dismiss their opponents' moral beliefs, and insist that they must either change or keep quiet, that is not tolerance, it is intolerance. I believe we are seeing more of this behavior in regards to opinions about homosexuality.

When groups such as FLAG&B become active in their community and challenge traditional beliefs about love between men and women, they are praised for their "optimism" and "enthusiasm" in "always wanting to change other people's ideas about what's acceptable," to quote last week's article.

However, when groups such as Exodus International, a faith-based group which counsels individuals who wish to leave their gay lifestyle behind, try to influence society's ideas of what is "acceptable" in regards to sexuality, they are decried as 'narrow minded' and 'imposing their morality on others.' This is a double standard that perhaps both FLAG&B and those in opposition to them need to take into consideration.

Warning: it's you versus the campus

By Maureen Fick

I stepped out of my mod on a misty morning, puddles gathering on either side of the narrow pathway leading to the tunnel that gives way to the expanse of our beautiful campus. This scene seemed innocent enough. A heavy bag of books on my back, a waterproof jacket tucked under my arm, I was prepared for almost any calamity. I felt confident, inspired to exercise the control I was certain comes with that level of preparedness.

I was wrong. Although I may have been the epitome of forethought when it comes to potential challenges Mother Nature could throw my way, I had not considered another threat—the campus itself.

Despite our obviously bright constructors and diligent maintenance crews, certain hazards have been left unattended. And I met one that morning.

Boldly beginning to cross the street that runs between Coleman Hall and the Weis Center, I concentrated my attention on a car slowing down to make the turn. I let it go ahead of me and, as my foot met the well-intended crosswalk, I immediately found myself blindly propelled forward.

Luckily, a brief flailing of my arms and a string of expletives helped me right myself enough to continue uneventfully that time.

Crosswalks serve an important purpose in designating a safe crossing zone for pedestrians but the materials from which they are composed could very well be lethal. In dry, agreeable weather the comforting white stripes seem harmless. But, if you so much as spit on them, they undergo an instantaneous transformation into what resembles a sheet of ice, sending you (and your already precarious heeled boots) skating across them. Meanwhile, you desperately attempt to regain your balance, and your pride, by the time you come to an abrupt halt with the concrete on the other side. Stay alert in inclement weather and avoid the crosswalks when possible. Even the most unassuming elements of student life can prove hazardous.

Another I encountered is on the tennis courts. On a warm spring night when a balmy breeze blows and the ordinary pressures of producing evidence of intellect to be handed in the next day are in a lull, there are few activities as enjoyable as an outdoor round of tennis. However, keep in mind, as you deposit quarters into the light machines by the fieldhouse, that the light activated will turn off when the amount of time purchased is up. And it goes off suddenly.

The first time I played at night I expected a warning before I would be plunged into total darkness. Once again, I was wrong. Lightheartedly lobbing the ball to my partner, I was relishing the comfortable temperature, the unusual feeling of freedom and the peacefulness of the isolated courts behind the fieldhouse.

Then, a microsecond after the ball began its trajectory back in my direction, it disappeared, replaced by a total blackness, dense and consuming.

Momentarily confused, I snapped out of my shock when the ball collided with my shoulder and I realized I was in the dark—nearly alone—next to the graveyard. I shrieked, my partner shrieked, and, while we managed to feel our ways out of the court and back into the welcome lighting of the fieldhouse driveway, the experience left me wary of playing tennis without the luxury of night-vision glasses.

Certainly these are not the only hidden hazards here at Bucknell but I hope they act as sufficient examples and warnings. Remember, it is you versus the campus and the more defenses you develop against inconspicuous hazards, the better off you will be.

Less talk, more action

By Maren Johnson

I wanted to take the opportunity this week not to delve into my opinion on some hot topic or another, but to thank the two women who wrote the article last week about eating disorders and distorted body image at our university. These issues are difficult to bring up and just as difficult to discuss.

Maybe that is the reason why these women are writing about it at a time when they are far removed from the Bucknell experience. Being here and seeing every day, whether it is blatant or subtle, puts a much different slant on the issue than being past the stage where you are part of it.

I don't intend to belittle the women for their courage in bringing up and writing about eating disorders publicly, but I think it is important to hear the voice of a student; someone who is here now to witness as well as experience the effects of our obsession with thinness.

Everyone should be willing to be that voice, but I will be the first to admit that among girlfriends and peers it is more than just a sticky subject. I am not trying in any way to berate and lecture those affected by eating disorders. To some degree we all have a distorted body image from time to time.

What I really want to impress upon anyone reading this is that we need to be constantly reinforcing the attitude that there is no ideal body that is perfect or that we should aspire to.

It may be that Bucknell's rather homogenous population creates a need not to distinguish oneself, but to become part of the group. However, the issue of eating disorders is not specific to Bucknell—it happens everywhere. Some environments are just more conducive to the problem than others. The fact is that all too often we let it go.

I don't doubt that there is a single person here who is not a victim of an eating disorder or is close to someone who is. The most important thing you can do for that person is to talk to them, to bring it out in the open, to let them know that they are not only hurting themselves but others as well. This is the most difficult and most important thing you can do.

Sometimes women don't realize what they are doing to themselves while everyone around them can see it clearly. Instead of reiterating the signs of an eating disorder and telling us not to succumb to the pressures of being thin, more time should be spent educating us on having the courage to help a friend in need.

Often girls are afraid that they'll sound didactic, motherly or bitchy by trying to help a friend. Others are scared of what it will do to the friendship itself. Eating disorders have a wonderful way of alienating everyone involved.

This is something that affects us all, but we are afraid to talk about it openly and honestly. We are afraid to get mad. We are infiltrated with what we should be and unable to accept and enjoy what we are.

I don't want to preach, and I know that change is almost never immediate, but if writing this strikes a chord with even a few people, I will know that I have begun to make my contribution to the solution.

FORUM

Seniors reflect on Bucknell experience

Senior Editor

Chris Ellis

The phrase has become so overused, so prevalent around campus that it has almost become cliche.

"Don't let your schoolwork stand in the way of your college education."

I wondered what it meant when I first came to Bucknell nearly four years ago, wondered how the activities, the programs, the culture of a college setting could be more important than the ideas taught in the classroom. I saw plenty of activities, for sure, and I planned to get involved heavily and have as much fun as possible, but extracurricular activities seemed, at the outset, to be mere diversion, pleasure.

The true learning that would take place in my college career, I was certain, would come from the classroom. Four years and countless experiences later, I couldn't have been more wrong.

The faculty and classroom experiences I've had here have been enriching. Maybe I just received all the right advice from all the right people to take all the right professors, but I will graduate from Bucknell having never filled out a negative course evaluation.

My professors at Bucknell generally seemed to care, to be interested, to actually want to teach. It's a quality I admired when I came to school here and one I'll leave appreciating even more.

Upon leaving Bucknell, my academic experiences will quickly fade and my grades and courses will become distant memories.

But will that matter? Almost certainly not. The true experiences and learning hat takes place at Bucknell—for those who wish to seek it—take place outside the classroom (besides, as a liberal arts major, what from the classroom is actually relevant to real-world experience, anyway?)

From day one, Bucknell seemed to me to be full of contradictions—intricacies that made it unique.

After four years, those contradictions have been what I've found to be most intriguing and enriching about the whole experience.

A painfully conservative student body and a painfully liberal faculty. A University that is committed to liberal arts education but has some of the best undergraduate engineering and management programs in the country.

A school small enough that you can at least recognize most of your senior class by the time you graduate, but large enough to compete nationally in athletics and academics.

A school with an historical reputation for being extraordinarily receptive to its students, but one which chooses a commencement speaker that will represent none of the undergraduate experience for almost all of the student body (Fine. Finances and availability dictate that we can't get Colin Powell. We understand that. Try to find someone at least tangentially relevant to something).

It has been learning about these contradictions—trying to understand the people and personalities that comprise Bucknell's culture—which has been the most rewarding experience for me. Classwork? That was always a distant second. Or third. Or fourth. To truly learn at Bucknell, it almost has to be.

My freshman year roommate—David Carpenter, the Bucknellian's deserving choice for Student of the Year—taught me more about being open-minded in forming my opinions on things than four years of Marxist economics ever could.

My experience as co editor-in-chief of *The Bucknellian* taught me more experience in dealing with administrators and speaking confidently than any public speaking class or any oral presentation could ever dream of, and showed me more about how to deal with deadlines and pressure than even the most demanding research paper.

Perhaps most beneficially of all, my experience in the Greek system has taught me how to be a leader, to handle myself in relationships with other people, and how to better myself both now and in the future than any other experience that Bucknell could have offered.

It gave me the opportunity to make decisions, to work with people and provided a network from which I could take chances and work to the best of my ability to become a more productive person.

Defending the Greek system—both publicly and privately—has also given me valuable experience in attempting to calmly defend my opinion to a group of faculty members whose closed-minded views on the system make a mockery of the free discussion of ideas that a liberal arts education is supposed to stand for (hey, there are hardheads in the real world too, right?)

As I close my Bucknell career, I will obviously know that it was studying and attending class that will enable me to pick up the $120,000 piece of paper that my parents saved for for so long. But I will also know that there is nothing that a liberal arts education can give you that rivals what the Bucknell experience will teach you.

Bucknell still has strides to make in giving the opportunities that I've been fortunate enough to experience to all of its students. I must confess that I have "fit the mold" of a Bucknell student from time to time, and that has helped give me the advantages I've received.

The University must focus on its commitment to its diversity and must realize that an admissions commitment to diversity is worthless if the institution at large doesn't share it. Opportunities must be expanded for alternate social activities, and ethnic and racial minorities must be given experiences that are commensurate with the one enjoyed by the other demographics represented at Bucknell.

But, for everyone, the opportunities are still there, and I leave this University feeling confident that I've taken full advantage of them.

The people of Bucknell—my *Bucknellian* coworkers, my fraternity brothers, my girlfriend, and everyone else that's comprised the Bucknell culture that I've experienced—have made the experience worthwhile.

Four years from now, I will remember little from the classroom—I won't know what conditions are necessary for economic development in Pakistan, or what factors decided the 1980 Presidential election, or what feminist critique of a social issue I read in some (all?) of my classes stood for, or why I was supposed to accept it as truth.

But I will remember the experiences—both social and otherwise—that got me acquainted with Bucknell's culture, and, in some small way, at least, the culture of the "real world." Not only will I remember these experiences, but I will draw on them every day, use them to help form a worldview of a "bubble" that extends far beyond Central Pennsylvania.

That's why I feel that I'm leaving college more educated and considerably more prepared to face life than when I came. The advice is simple. Education is important, and grades will get you a start. But under no circumstances, for whatever reason, 'let your schoolwork stand in the way of your college education.'

Because after the books are closed, learning starts.

Senior Editor

Jared Silliker

Well, as you can see, I got a new photo for my column this week as I gave myself a much-needed haircut over the weekend. And yes, I do cut my own hair, albeit not an exact science.

Last week in this space I took some time to discuss my personal criticisms of Bucknell. Interestingly, I think I received more comments about this piece than any in my four years here—responses even from people I don't know walking across campus.

In this, an update is in order—on the up side, I've received two faculty invites for get-togethers and thanks to Professor Shackelford, I was even able to have class outside for once.

To my knowledge, however, there has been no change in policy by the gatekeepers of Davis Gym and my lunch bill still goes over meal credit in the Bison.

Enough, though—as alluded to last week, I could not resign myself to leave Bucknell with negative thoughts of such a great institution. Hopefully this won't come across as pumping the University up, but rather as final impressions of my college career. Take it for what its worth, I guess.

This is mostly about what I will miss most about Bucknell, the things that have made my four years here priceless (I know, you're all tired of Mastercard).

But really, we always talk about the cost of a college education these days-we pay for the right to come to this campus and attend classes and become part of the Bucknell community.

So now as seniors—as is customary—it is time to reflect and ask, was it worth it? Was the time spent here priceless? Can you really buy the college experience with Mastercard?

I would say no to the latter, and although I wasn't writing the big checks to Bucknell's finance office, these four years have been priceless and far outweigh the costs. The $64,000 question—which will never be posed on any "Millionaire" show—what makes Bucknell so special?

I most definitely do not have all the answers to this one, but I can tell you about some things that have made my life here most enjoyable. Not to sound cliche, but it revolves around the people here.

Maybe they say this on all campuses, but this place seems to thrive because it attracts and develops good people—athletic, intelligent, polite, artistic, personable, outspoken, quiet, kind—whatever the characteristic may be. These people create Bucknell's unique character.

Many aspects of this institution are indescribable and intangible. It's something you feel when you arrive on campus for the first time and in many ways will be what I feel when I drive away with my diploma on the seat next to me.

The nature of the excitement has changed a bit—pulling up to Smith Hall in August 1996 with my father brought an intense sense of what was to come—what would those first few days be like? Would I get along with my roommate? Now that excitement has turned to a reflection of what has transpired and of celebration. How have our lives changed? Where do we go now? We can take a step back and admire the collection of friends we have made and all that we have accomplished.

Monday I even found myself still learning things about Bucknell—with less than a month until graduation. This learning came through one of the great ambassadors of Bucknell, Brad Tufts, who is retiring from the Athletic Department this week after 41 years of service.

After our interview, Brad walked me through the nearby cemetery showing me the gravesites of Bucknell greats that came before either of us—namely Christy Mathewson and George Henry Ramer. Most of you will recognize these two names; if not, I urge you to find out.

Please take the time to read my account of Brad Tufts' retirement and reflections of his time at Bucknell—not for me, though; read it for him, because Brad Tufts and other mentors here are the people that make Bucknell the special place that it is.

Another group of people that shape Bucknell is the faculty. Last week, I criticized student-faculty interactions without conceding this point, I should take this opportunity to thank the faculty as well. Not only have they challenged me intellectually, but I have found it extremely easy to become close friends with many of my professors.

Also connected to the quality of people at Bucknell, there are facets that we often take for granted after four years. Trust plays a big role in this. I have always been impressed that I can leave my belongings unattended just about anywhere on this campus, and not think twice about it.

I've never once felt nervous or threatened walking alone at night on this campus, although I know this probably isn't the case throughout the student body. There is a fairly high sense of safety here, though, which I'm sure makes my mother happy every day.

I don't think I've locked my room door since a short period of time freshman year. We also do not have to sign-in visitors or present ID cards to enter dorms—both annoying processes that I know are enforced at other schools.

I think this notion of trust, in turn, leads directly to a sense a community—a place we have comfortably been able to call home for four years.

In this community, there have almost been too many things to become involved in at Bucknell, and thankfully I've been lucky enough to jump in on several unique opportunities including fraternity and Greek life, varsity tennis, intramurals and of course working for this publication.

The diversity of activities has certainly been the backbone of my career here, and seems to be a cornerstone of Bucknell's existence-encouraging the growth of balanced young men and women.

I've always told people that Bucknell is "just the right size" where you see people you know everywhere you go, but still meet new people all the time. There are even seniors, not to mention underclassmen that I'm just getting to know now. I even find myself becoming frustrated in this as I feel we have begun to run out of time here.

I'm just going to miss a lot of things, as I'm sure all seniors do—some I can foresee already, while others will hit me in a few months or years. I'm going to miss bumping into friends all day long, every day. I'll miss eating with groups of friends for just about every meal.

I know that some of these basic parts of our daily routine will soon be gone. Sure, they will be replaced by new activities and new friends will be made.Yes, I'm excited to be out on my own too.

As I did when graduating from high school, I realized it was time to move on. I've learned my "college lessons" and been through the drill, met my requirements, etc. Now we've reached that point where we have to leave and actually do something with our lives—use what we've "learned." Some of us have distinct plans, others like myself are teetering between a few possibilities, and some students still have no idea what lies ahead.

I'm sure once I'm settled in to a new life, I'll look back and wonder why I was ever hesitant to leave Lewisburg.

I guess the idea that we will all go our separate ways on May 21 is just a bit daunting—a core group of friends I'm sure will remain lifelong friends. I will bump into others when I least expect it. With others I will email and exchange Christmas cards. Then there are those that I won't see until our reunions. And finally, there are members of my graduating class that I will never see again—for whatever reason—May 21 will be our last goodbye.

A lot of great people have been a part of my priceless experience at Bucknell and no matter what role they played, I would thank them all.

By Meredith Mickel

There is no place like My Bucknell. Many students have come and gone from this Lewisburg campus, but none have experienced My Bucknell. My Bucknell welcomed me to the University community four years ago, in the fall of 1996. It has offered a variety of learning experiences, both inside and outside of the classroom. I have been able to travel abroad and do my student teaching in New Zealand as well as see the sun rise over the Susquehanna River (although beautiful, I only needed one semester of crew to experience it!) I have continued to be a part of varsity athletics and, thus, the spirit of My Bucknell. The spirit of the University radiates from its alumni and can be seen throughout the stands at our sporting events and at campus functions like Open House.

When I came to Bucknell it belonged to other students. Each one of these students had their own Bucknell and their own experiences and memories. I had no memories because they all lay in front of me. Now I look back at my four years and find it hard to determine just where My Bucknell became Our Bucknell. Somewhere in this seemingly brief time it happened. Somewhere some of the newness wore off and we became familiar with the events surrounding the campus community and with the friends we had become. In fact, we became family. We turned to each other when we were happy and when we were not, when there was fun to be had and when there was work to be done. We can't imagine turning anywhere else. We are one in Bucknell and now we must turn to each other one last time.

I will always look in wonder at this beautiful campus and its students. I will always be amazed that we have all been lucky enough to experience Our Bucknell together. I will remember, with tenderness, the events that make a little part of this experience remain as My Bucknell. I will not forget moving into Vedder Hall my freshman year or forming career-long friendships that mean the world to me. I will not forget the feeling of standing under the basket or on the sidelines as one of our teams takes the lead and the band plays, "Ray Bucknell." After all, that is who we are.

As my four years draws to a close and I prepare to stand in front of one last tour group I think about what lies ahead of them. I see how each member of our senior class has been afforded the opportunity to become his or her own person while also becoming part of a greater whole. Each one of us became a Bucknellian four years ago. Each created his or her own experience and memories. I think about these prospective students and wonder what their Bucknell will be like? Sure, as their time draws to a close they too will find themselves ready to experience life beyond Bucknell. I can only hope that they guard their memories as carefully and cherish them as much as I do mine. After all, they will be living the legacy of My Bucknell.

By Maureen Kelly

Bucknell has taught me many things in the four years I have spent here: 1. Not all challenges are as hard as you think. 2. Some challenges are harder than you imagined. 3. Not everyone is meant to be your friend but the ones who are your friends are the best you could have hoped for, and 4. Time really does know how to fly.

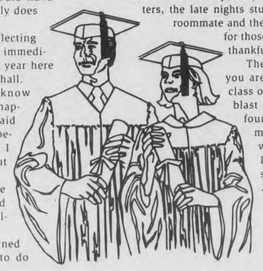
When I think about reflecting on my senior year, my mind immediately drifts back to my first year here on Smith 3D, my freshmen hall.

In reality, I did not know much about what was to happen in college, yet as I said goodbye to my parents I believed I knew everything. I had no idea what I was about to learn at Bucknell.

Bucknell teaches us to be a success academically and socially as well as personally.

At Bucknell, I have learned more about what I want to do with my life, who I want to share it with and why I want to be that person. There have been many professors and family members who have helped me to attain my goals. Without them I don't think a lot of us would have gotten by.

However, the accomplishment of my goals has also come through the laughter of my friends, the tears over a breakup, the jokes with my sorority sisters, the late nights studying, the anger at my roommate and the fear for my future. It is for those times that I am equally thankful.



They say time flies when you are having fun. Well, the class of 2000 must have had a blast because I watched our four years race right past my eyes. I don't know where the time went but I know it was well spent. To the class of 2001, 2002 and 2003, enjoy your time here.

To the class of 2000, remember how fast it went and enjoy every moment of the future.

FEATURES

Michael Payne stays busy

By Katie Hays

With perhaps more quiet focus than lighthearted humor (though his colleagues and students know him for both) Michael Payne, presidential professor of English for the past 18 years and professor of English literature at Bucknell for a remarkable 31 years, has earned an honorable reputation for both his teaching and scholarship.

But he prefers not to speak of this.

A conversation with Payne might center on his recent visit to Athens rather than describing the reason for his visit (his invitation to give lectures at the prestigious American University of Greece). Payne details his experience there, recounting his observations of a superstitious dog that refused to enter the Tomb of Clytemnestra. He describes a small, raised piece of land in Athens (the singular spot on which Orestes was tried, St. Paul preached and Socrates taught) and his listener is transported.

Moreover, when the topic centers around Payne's numerous publications (he has over fifty), he chooses the subject of one such publication and elaborates on it, discussing Foucault or Derrida with enthusiasm, but preferring that the achievements of Michael Payne remain in the shadows. Payne sets an example. He dedicates himself to that which he loves, take an interest in others, and readily converses on nearly any topic.

On the topic of his dedication to Bucknell, Payne revealed, "Some universities are either so famous or so ancient that it takes an incredible crisis for any change or innovation to occur. At Bucknell, individual students or individual faculty members can make a difference in what they care about at any given time. Whether it's the development of the scholars program or changes in residential life, individuals here can make changes."

Payne himself made several changes in his life, both in college and after. "As a freshman, I started as a chemical engineering major. I liked the class and still find the subject highly interesting, but I also took a classics course that first year, as well as a freshman English course, he said. "My freshman classes had 1,000 students, 850 students, 600 students and 25 students. There was something about that 25—student classics course I liked. I converted."

After the "conversion" to English, Payne earned his B.A. in the humanities at Southern Oregon University. After graduating, he taught high school English before enrolling in graduate school at the University of Oregon. There, he specialized in Shakespeare and taught before coming to Bucknell.

Payne speaks favorably of Bucknell, describing quietly, "It's small enough not to be a monster. It's big enough not to be a mold. Academically, it's an interesting and challenging place. From the teacher's point of view, it is pleasurable to be in a place where one can help students to see their excellence, rather than helping them to combat their arrogance.

Dan Blair—The Bucknellian

Prof. Michael Payne tackles all he does with modesty

Payne currently teaches courses in literary theory and Shakespeare, as well as one entitled "Milton, Blake, and the Bible." Recently, he initiated a program at Bucknell through which students in his children's literature class read to preschoolers.

"I stole the idea," he grinned. "In 1997, I took a sabbatical and visited my daughter in Oregon; there, I read to a child in the SMART program, which is designed to 'Start Making A Reader Today.' The little boy to whom I read, Miguel, told me, 'Michael, you're the only man I ever talk to.' It was a good program, so I used the idea when I returned to Bucknell."

Besides initiating the reading program, Payne is an avid concert—goer, attending most of the Weis Center's musical events. He is also a fan of the women's basketball team and listens to many of the lecturers who visit the campus.

Despite his many on—campus activities, Payne said, "Of course, I live in town and not on campus. So I'm sometimes there too." His contagious chuckle follows. Besides his book—filled office in the corner of the Vaughn Literature building, Payne inhabits a historic Lewisburg home, owned by the Packwood House museum. "A female artist whose work is on display in Packwood House helped to design the house where I now live," Payne described.

Currently, Payne is working on new journal articles; his main project has to do with the foundation seminar that he teaches, "Darwin, Marx, Nietszche, Freud." He elaborated, "These four thinkers brought about a crisis of knowledge; the fields that they touched were never the same after them. Now, we look back and see what kind of lasting changes they brought."

Payne's areas of specialty are numerous, ranging from Shakespeare and Renaissance Literature to Cultural and Critical Theory, from Milton and Blake to Virginia Woolf and Bloomsbury, and from Biblical Literature to Children's Literature. He has given lectures and papers in London, Russia and Athens. As he leans forward over his desk, weighing his words carefully, ever attentive and engaged in the moment, Payne is more than his achievements reveal of him.

At the mention of the revered Shakespeare professor, students have been known to pause in their work to remark articulately, "Yo, he's the man." Yes, the phrase is cliché, but it may be an apt description. Payne is quiet and witty, indrawn and interested, assertive and humble. With all of his enigmatic and seemingly contradictory traits, he reminds us of the reason for our respect.

He's human, and we like him.

Foodtown stays in the family

Local shop retains its family roots in the face of Market Street competition

By Paul Benedetto

In today's modern, technologically advancing world ruled by corporate giants like Weis and Wal—Mart, people so rarely have the time or the inclination to develop a relationship with their community's family—run businesses. In a society where "bigger" and "faster" always mean better, street—front shop windows that once reflected the bustling daily life of Lewisburg's Market Street now greet us with plywood boards and the haunting memory of small—town life that once was.

Many may not be very familiar with some of Lewisburg's smaller and more personal independently owned businesses. You may be too accustomed to the fast—paced life of a big city and find rural living in central Pennsylvania far too lackadaisical. But there are still some people who wish they could return to the days of drug store milk shakes and local dry goods stores. Some of those people are Paul Matrey, Jr. and his family. They are the second generation owners, managers and employees of Lewisburg's last friendly, family grocery store—Foodtown.

> *"It has always been a family run business. It was my father before me ... and [now] it is my wife, Terry and I."*
>
> *— Paul Matrey*

In a brief interview with Mr. Matrey, I was given a most informative history lesson on the store's property, its previous owners and its integrality to the Borough of Lewisburg. When Ludwig Derr founded Lewisburg, he hired Samuel Weiser to survey the land on which the town was built. For his services, Weiser was given the property upon which Foodtown sits, as financial reimbursement proved to be impossible after Derr paid William Penn in Philadelphia for the land.

In 1831, John Walls, a local resident of Lewisburg, bought the property and constructed the building that still lines Market Street to this day. Between the years of 1831 and 1965, 225 Market Street served the community as dry goods store and bookstore, owned and operated by the Walls family. In 1965, the property deeds changed hands for the third and final time since the town's founding. It was Mr. Matrey's father, Paul Matrey Sr., who bought the property and soon turned it into a business that would be passed down from generation to generation, the symbol and livelihood of the Matrey family.

For the last thirty—five years, Foodtown has been an independently owned and run family business and an integral part of the townspeople's daily life. Of course the battle has been much more tiresome for a small family than for corporate shareholders, but the indefatigable Matrey family continues to serve their customers with a smile 363 days a year from nine in the morning to nine at night.

Undoubtedly, it is the perseverance and sense of duty that characterizes the Matrey family that has allowed them to assume responsibility at one of the gravest moments in the town's history. In the summer of 1972, the Susquehanna River flooded so profusely that it left Lewisburg a stranded island for more than a week. At that time, when so many other local communities in the river valley were demolished, it was the honorable efforts of the Matrey family that helped save Lewisburg. Paul Matrey's father received emergency rations from the National Guard via parachute to distribute throughout the town, rescuing the community from tragedy.

Paul Matrey is proud of the business his father created and feels that there is something noble in honoring his father's memory by keeping Foodtown alive. "It has always been a family run business," Matrey said. "It was my father before me, and for the last twelve years it has been my wife, Terry and I." When I asked him when his son, Gregory would inherit the family business, he replied, "Well, he's only eighteen months old. It will be at least another two or three years."

There is no question that the Matreys' exemplary service and loyalty to the community have helped Foodtown to stay in business for the last thirty—five years. But if you are still not convinced that their pertinacity will win out in the end against the ever—expanding Weis Markets, then I suggest you take a trip down to 225 Market Street. You can taste for yourself the quality and freshness of their homemade salads prepared daily, and deli sandwiches stuffed with a little slice of love.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

I have grown up with the belief that a guy should treat a girl like a lady. He should be a gentleman and give her the respect that she deserves. After I broke up with my boyfriend a few months ago, I went on the hunt for a guy who would treat me as I felt I deserved to be treated, essentially like a princess. It took a lot of guys, some time, and a lot of broken hearts, but I finally felt as though I found my own prince.

At first our relationship was going great; we spent a ton of time together, and I really felt as though we were right for one another. We have a lot in common enjoy each other's company. Additionally, and perhaps most importantly of all, he always treated me as though I came first in his life. I guess you could say he was at my beck and call, and he didn't even mind; to him, being with me was a pleasure.

However, we have been dating for about 8 months now, and the charm and charisma that he once had is no longer there for me. While we still spend time with one another, he no longer treats me as if I am the only thing in the world that means anything to him. Nowadays he goes out with guy friends to the bar, or to another friend's house to just hang out, and consequently leaves me behind in the dust.

This doesn't happen very often. I feel really lonely without him, and sometimes I get mad that he would rather spend time with other friends than with me. It seems that he is treating me like I am just some regular girlfriend now, a country hick that he picked up at the bowling alley. I guess I really don't know what to do about our relationship. I really care for him, but maybe he just isn't the gentleman that I once pictured him as.

To be quite honest, I don't feel I can be treated as a second priority any longer. I should probably say something to him about how I feel, but I just don't know how it will come out. So I ask you, how can I tell him about what I am feeling and how I want to be treated? I want to save our relationship, but I think that maybe he just isn't right for me.

A Deserving Girl

Dear A Deserving Girl,

Let me start of by saying that you sound like a dominatrix more than anything else. So what if your boyfriend chooses to go out with his friends occasionally? He has every right to do so.

Despite the fact that he should spend time with you because you are his girlfriend, he is still entitled to, and needs to, spend time with other people. Secondly, let me tell you that there is a difference between a gentleman and someone who is going to be at your "beck and call," as you put it.

I personally don't think that anyone in his right mind would be at someone else's beck and call; that just isn't how things work. If someone did in fact choose to do so, he either has nothing else to do with his time or perhaps feels as though you need all the attention that you can get, because, let's be real, maybe you don't have very many friends.

What I am getting at is the fact that you can't expect people to treat you like that, and they should not feel the need to act that way. There is a difference between someone who is going to be there and care for you, and who enjoys your company, and someone who is going to massage the corns on your feet.

In view of the situation, I think that it would be wise to say something to your boyfriend. There is definitely nothing wrong with telling him how you feel. However, you have to be ready for him to tell you anything.

He may feel, as he probably should, that you are overbearing and somewhat controlling. I mean, let's be real; not wanting someone to go out with friends is just plain wrong. You should probably also try to realize that you are not being treated as a second priority. He may think of you all of the time, and want to spend time with you.

However, people still need to do other things in their lives, and sometimes the time that people spend away from one another is just as good as the time that they spend together.

You should also consider the fact that possibly nothing has changed in your relationship, and just your perception of the situation has changed. Sometimes people go through what is known as the honeymooner period, when everything is perfect, and the other person is your dream; you know the deal.

Anyway, perhaps your relationship is just becoming normal (I think what you want the relationship to be is in no way normal, but that is beside the point.) The two of you may just be growing accustomed to one another, and the thrill of a new relationship that was once there is changing, and to a point, you have to accept that.

As I have already said, I think that talking to him would solve some problems. You may lean a lot from one another just from a simple conversation. However, I believe that you may have to rethink what you are looking for in a guy.

To be honest, I don't think that any person on the male or female side of any relationship would want to live up to what you expect.

So change what you expect a little bit and don't feel the need to find someone perfect. You may find that you are a lot happier in the end. In the words of Blink 182, "Some girls try too hard to impress with the way that they dress, with those things on their chests, and the things they suggest.

Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink, there is no need to worry; all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. Questions or comments can be sent to Eli Winkler at box C2815, attn: Wink Thinks. Please note that Wink Thinks is meant to be instructional as well as entertaining. Engineers get some real world experience

Students aid in planning a new Market Street that will be safer for pedestrians and more efficient at handling traffic

By Blaire Zeiders

Have you ever strolled down Market Street in downtown Lewisburg, contemplating traffic patterns that some better planning might improve? Have you, perhaps, had the irresistible urge to spend over 1,000 hours devising and calculating solutions to these situations?

For 35 students in Associate Professor of Civil and Environmental Engineering Richard McGinnis' civil engineering class, these concerns have become key, and their projects regarding those concerns are attracting attention.

Students enrolled in McGinnis' "Introduction to Transportation Engineering" (CENG 330) class have been working diligently since February preparing design alternatives for Market Street that will be sensitive to both the businesses and residences of the Lewisburg community.

Student designers must consider the expected increase in traffic due to improvements on Route 147, as well as Market Street's connection to Route 15, and take into account the Lewisburg River Bridge. Next year, in the project's continuation, some student designs may actually be implemented.

On Tuesday, April 25, the students presented their project ideas to an interested audience at the Brynwood Room, on Sixth Street at 7 p.m. The group assembled heard solutions ranging from a William Penn Drive bypass, a Water Street to River Road bypass, the changing of crosswalks downtown and retiming of crossing signals.

Throughout the semester, students in McGinnis' class worked in groups, keeping journals regarding their plans and ideas for improvements, submitting weekly reports on group progression.

Dan Blair—The Bucknellian

Professor McGinnis and two students in front of their proposed solutions to Lewisburg's growing traffic problems.

Traffic volume on Market Street, the unfriendliness of Market Street to pedestrians and residents, and parking in the downtown area kept them occupied as they struggled optimistically toward the "best of all possible" designs.

This project's interest lies in the fact that it applies what students have learned in the classroom to actual problems that they may have themselves noticed on walks through Lewisburg. Additional learning opportunities also arise after the student planning period.

McGinnis mentioned that some minor problems arise when the designs are unveiled to the public, with some people perceiving the engineers' ideas as 'too elaborate.' "A compromise has to be reached before the design can be seriously considered," he said.

McGinnis continued, "Last year, some designs were drawn up concerning the area around the monument in downtown Lewisburg. The four—way stop is not exactly what the engineers and I had in mind, but it seems to serve its purpose."

The engineers have now had the valuable opportunity of working with people who have real concerns about their projects. Residents were asked to be receptive to the students' questions and to give their opinions about what they thought would improve the efficiency and appearance of Market Street.

The combination of these suggestions, as well as techniques from the classroom and personal creativity, promises to yield some interesting results.

Now that the project is approaching its conclusion, the students and public had a chance to reunite and discuss the outcome of the engineers' labors.

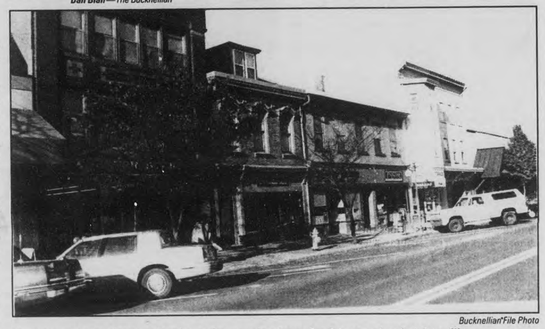
With the academic year drawing to its close and finals appearing on the horizon, the pressure is on for many students, and McGinnis recognizes this. He added, "[This project] is more work ... but is more fun and could improve the town."

"Although most students will move on and either graduate or choose not to continue in this branch of engineering," McGinnis said, "a few juniors will have the chance to see some of the effects of their toil. This year is really geared towards coming up with ideas, but next year some of these designs may actually be implemented." McGinnis is hoping that a few of the students will take this on next year.

Which of the designs are most successful and whether those designs will make the transition from plans on paper to concrete realities has yet to be determined, but McGinnis stresses that it is the project itself that contains the reward for students. They learn valuable skills and encounter problems that they might not consider until entering their careers.

Whether it's for a career or out of speculative interest, if you do have the urge to literally make your mark to improve a community or city, consider talking to students in McGinnis' class who may share your desire, and who have already acted on it.

When it comes to the improvement of Lewisburg, all roads lead to Market Street, and with the contributions of a few motivated University students, the possibilities are endless.

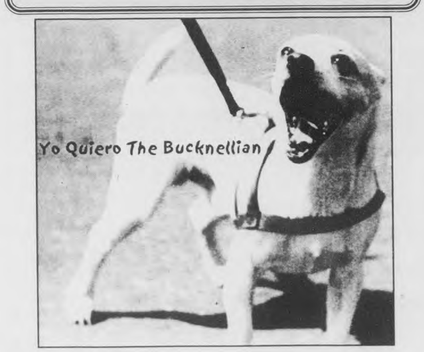


Bucknellian File Photo

Downtown Market Street as it exists today, creating havoc for drivers and pedestrians alike.

The Bucknellian editorial staff would like to thank all subscribers, advertisers, and loyal readers for their support and feedback throughout the year.

We wish Chris Ellis, Jared Silliker, Jonah Half and Lindsay Gash all the best in the future. Thank you all for your dedication and enthusiasm!



Walk to benefit Women in Transition

By Helen Shen

The Susquehanna Valley Women in Transition (SVWIT) will be celebrating its 25th anniversary by sponsoring its annual walk this Saturday, April 29, 2000.

Walk 2000, which will be held at the Shikellamy State Park and Marina, is sure to attract philanthropists of all kinds. Whether one chooses to walk alone or to bring family, friends, or even co—workers, this Saturday's event will no doubt benefit the community.

Susquehanna Valley Women in Transition is a local organization that not only encourages the community to 'walk away from violence' but also supports those who have been victims of domestic violence or sexual assault.

"We serve about 2500 women, men, and children per year," said Marty Gates, the executive director of SVWIT, who also teaches part—time at the University.

The SVWIT house, whose location is kept secret, houses up to 13 adults and children at a time. "I say 'adults' because not just women are battered and sexually assaulted now. We have provided services to men too," Gates said. The house serves men, women and children in the counties of Snyder, Union and North Umberland.

The SVWIT house is not the only service that Susquehanna Valley Women in Transition provides. "We also run up to eight support groups per week," added Gates.

SVWIT also focuses greatly on the education of young people in the community's public schools. Not only do they provide programs on sexual assault for the public schools in the area, but Bucknellians also benefit from SVWIT. Working with the Panhellenic Council, SVWIT provides many programs that spur awareness among students.

They also provide a 24—hour hotline. This number (1—800—850—7948) allows callers to speak to someone who is well—trained and ready to help. SVWIT offers hospital accompaniment. Members of the staff go to hospital examinations with victims of battery or sexual assault and provide emotional support.

This year's walk is not the only fundraiser SVWIT sponsors. In January, a membership drive raises money for the group, and a service auction in March also proves to benefit SVWIT's cause. "Businesses of all types donate services, from dental exams to beauty care," Gates added

But the annual SVWIT walk is one—of—a—kind, for it is a fun activity that offers the community (including Bucknell students) an opportunity to contribute to the organization. Registration for the walk begins at 9:00 am, and the walk officially starts at 10:00.

It takes only one hour to walk two times around Shikellamy State Park and Marina (only five kilometers) and afterward, even more amusement awaits. Three guest speakers are scheduled to address the walkers: a survivor, a public official, and a member of the SVWIT staff. Refreshments and food will be served and a live band is expected to perform.

Why the Shikellamy State Park? "[It] gives us a fully accessible walkway," Gates said. "And we don't have to worry about traffic." More than 60 walkers arrive early in the morning, ready to walk for a good cause. "It really is a nice reason to come out for a walk," offers Gates.

Indeed, helping to raise money in order to fund a service for battered and sexually assaulted members of the community is a great reason to take a walk on a Saturday morning.

Gates is very enthusiastic about the attitude of the Bucknellians. "The sororities and fraternities are constantly doing service projects. They are very helpful in raising money for us," she said.

She appreciates the services performed by Bucknellians: whether it is painting, cleaning, or providing childcare, Bucknell shares a close relationship of care and service with SVWIT.

"We do appreciate support from the community," Gates said. "And we encourage services from Bucknell as well." For those who are willing to "walk away from violence," this Saturday brings a perfect opportunity to find those sneakers and spend a morning walking for a good cause.

University praises Dunker's community service efforts

Sophomore's Milton YMCA basketball programs net top University prizes, praise throughout campus community

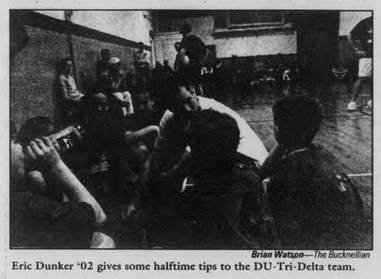
By Brian Watson

When Eric Dunker '02 came to the University, he decided to take a proactive role in helping area youths. Dunker took his love—basketball—and turned it into an enormously successful community service.

After developing a six—week instructional basketball clinic in the fall of 1998, Dunker expanded his efforts into a spring basketball league, with all coaching coming from fraternity and sorority members. For his dedication to the cause, he was honored with both the 1999—2000 Outstanding University Volunteer and Outstanding Greek Sophomore awards during the past two weeks.

"I thought it was a good idea because the kids didn't have any spring basketball leagues," Dunker said. "When I was a kid, businesses sponsored my teams, so I thought this was something that the fraternities and sororities could do."

When he arrived at the University, Dunker realized that basketball wasn't a prevalent sport in the Lewisburg area. With help from several close friends, he was able to set up an instructional clinic on Saturday mornings last fall at the Milton YMCA, giving kids the chance to learn the fundamentals of the game and test them out in drills and scrimmages.



Brian Watson—The Bucknellian

Eric Dunker '02 gives some halftime tips to the DU-Tri-Delta team.

The money each player pays goes to the Milton YMCA, which will be used to develop other youth programs.

Katherine Westphal '02 was instrumental in distributing flyers, designing T—shirts and creating posters for local school districts. She and Dunker distributed over 2,000 flyers to local youths and sent propaganda to various area school districts.

Assistant Professor of Management Keith Willoughby has been a constant spectator at games and applauds the efforts of the coaches. Willoughby's son, Mark, plays point guard for the Delta Upsilon—Delta Delta Delta team.

"Our experience with the Milton basketball league has been extremely positive. The league has helped the players to build individual as well as team—oriented skills," Willoughby said. "By volunteering their time, I think the coaches show the players (and their parents) that they really care about what they are doing."

Darren Shames '02 coached and assisted Dunker in both the fall and spring programs. "I am amazed at how far the league has come along; it is a credit to the amount of time, effort, and personal sacrifice that Dunker has put forth to help the kids," Shames said. "Eric basically developed the league entirely on his own. It has intertwined the Greek system and the community for one common good."

Friends often ask Dunker why he puts so much time into his community service exploits.

"The reason I have so much motivation is because it makes me happier," Dunker said. "It gives me the chance to make a difference in people's lives."

In the future, Dunker plans to bring all the Greeks into the league, and also incorporate sports teams and academic organizations.

Brian Watson—The Bucknellian

Dunker (center, in white shirt) poses with the coaches and players of the four teams in the Bucknell/Milton YMCA Basketball League.

"I'm so impressed with the level of dedication and enthusiasm exhibited by the fraternities and sororities so far," Dunker said. "This is something that could get much bigger. Everything I envisioned is coming true. It couldn't be better."

"The greatest reward of working with the kids is seeing the excitement and pure joy on their faces every time they come to play," Shames said. "I am surprised at how much these kids have actually improved, and I think that is a tribute to the effort put forth by all of the volunteers."

Willoughby echoed their enthusiasm: "The coaches display an infectious brand of enthusiasm and provide an excellent role—model for the players. You can really tell they enjoy helping out the kids."

Management company sales proceeds help serve the local community

By Lou Palma, Angela Beblo, Emma Stefanski and Adam Haas

Do you know where the money you spend on MG 101 products goes? Are the company members entitled to their profits? Does the Bookstore keep it? NOPE! The money is donated to a charity of the company's choice.

However, it is not enough to just donate money to a charity. Part of the MG101 experience is participating in a service project benefiting this charity. This year's companies, Alota Blankotas, Buck—Flops, and Cattyshack provided service for two very important local charities.

Company A, Alota Blankotas, performed its service project at the Northumberland Housing Authority under the guidance of Shannon Thatcher, head of activities at the authority. Alota Blankotas' service division was lead by vice president Lou Palma '03, and the division did a great job of helping out Shannon Thatcher. Melissa Gallagher '03 played a great role as she worked directly with Thatcher to create activities that would be both educational and fun. Other members of the service division included Linette Hosler '03, Jon Bowers '02, Pat Boyle '02, and Brad Humphrey '03.

"The theme of Alota Blankotas' service project was "The Olympics." In the Olympics, kids from Northumberland participated in events that stressed friendly competition. The Olympics culminated with a community barbecue, at which the Northumberland Community had a chance to come together. The project was a great success and a good time was had by both company members and the kids of Northumberland.

Courtesy of www.tdscats.com

Jell—O. Slime. Noodle necklaces. What do these three things have in common? All three were part of numerous activities run by members of Buck—Flops, Management Company B, during "No Class Activities Days" on March 30 and 31 at the Donald L. Heiter Community Center in Lewisburg.

Each day, approximately 30 children from the area came to the center to participate in activities ranging from an egg hunt to face/hand painting to relay races. Each company member was in charge of an activity.

Buck—Flops chose to help with the project as a way to give children an alternative to staying at home and watching TV or running around without anything to do for the two days that Lewisburg area schools did not have classes.

The service division of Buck—Flops included Matt Gorman '02, Angela Beblo '02, and Kristen Grubic '02 and was led by Emma Stefanski '02. The four members worked closely with Donna DiFranco at the center.

Their work included an aggressive advertising campaign, planning activities, and purchasing necessary supplies. The profits from the sales of flip—flops and temporary tattoos were used by the center partly to purchase supplies and all left over supplies were left at the center for future use. Remaining profits will be used to help fund the center's Habitat for Humanity trip to Philadelphia.

Company C, Cattyshack, performed their service project at T & D Cats of the World Menagerie. Many of you may have not realized that there are lions, tigers and bears, living only miles away from our central Pennsylvania campus. Down route 45, in Penns' Creek, Terry Mattev, a retired state policeman runs this wildlife refuge and rehabilitation center. Here, injured, abused and malnourished animals are cared for. As the name implies, many of these animals are big cats, which includes lions and tigers. Specifically, Terry has 11 tigers, including both Bengal and Siberian Tigers. These magnificent animals have been confiscated from circuses, private homes, and even zoos that have not properly cared for these endangered species.

Courtesy of www.tdscats.com

Without Terry's intervention, these animals would most likely die, reducing the already dwindling population. In fact, the status of tigers in the world is extremely dim—biologists predict that with the current birth/death rate, there will be no tigers left in the wild by 2020.

T & D cares for a myriad of other species, including deer, fish, raccoons, emus, cougars and a coyote to name a few. The organization receives no external funding other than private donations. This means that Terry must rely on volunteers to help with the physical labor necessary to maintain the facility. These are the reasons that Company C, Cattyshack, chose to make T & Ds their service project. Cattyshack spent April 1 and 2 at T & Ds helping building the fence for a new tiger enclosure.

The money earned from the selling of pint glasses, which totaled $1,137.06 was also given to T & D to buy food and supplies for future projects. If you are interested in making a difference and helping at T & Ds, you can reach them at www.tdscats.com, or you can call Adam Haas '01 at 75722.

Dance company's spring performance combines talents

By Krista McCabe

The Bucknell Dance Company will be performing their spring performance on Friday, April 28 and Saturday, April 29. The performances are at 8:30 pm each night at the Weis Center for the Performing Arts.

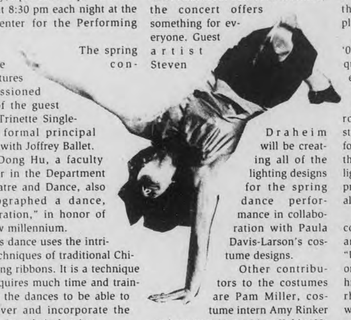
The spring dance concert features commissioned work of the guest artist, Trinette Singleton, a formal principal dancer with Joffrey Ballet.

Er-Dong Hu, a faculty member in the Department of Theatre and Dance, also choreographed a dance, "Celebration," in honor of the new millennium.

This dance uses the intricate techniques of traditional Chinese long ribbons. It is a technique that requires much time and training for the dances to be able to maneuver and incorporate the ribbons into their dancing.

The concert will also include a piece directed by former Bucknell Department of Theatre and Dance professor Shellie Cash and will be performed by six returning alumni of the Bucknell Dance Company. This year's spring dance concert is a true collaboration of the talents of the past and present talents of the Department.

Because the Dance Company uses a wide range of dance styles and music from ballroom to ethnic, the concert offers something for everyone. Guest artist Steven Draheim will be creating all of the lighting designs for the spring dance performance in collaboration with Paula Davis-Larson's costume designs.



Other contributors to the costumes are Pam Miller, costume intern Amy Rinker and costume intern Mary Kokie '02.

The costume and set designs have been produced by the Department of Theatre and Dance with special funding from the Bucknell Association for the Arts and the Bucknell Student Government.

Many of the pieces being performed have been done by members of the Dance Company that are students at Bucknell. Here is detailed description of the student choreographers and what they have planned:

Sarah Wagner '01 is choreographing a quirky modern piece entitled "33 1/3" based on three traditional ballroom dancing styles including the foxtrot, the tango and the cha-cha. Her music is light, fun and features surprising rhythms and unconventional patterns.

Kristy Kuhn '00 is working with contrasting combinations of jazz and modern dance in her piece "Urban Beat." Instead of focussing on a narrative theme or story, Kuhn's work emphasized the dueling rhythmic nature of her music which combines lyrical melodies with powerful techno beat.

Steve Stasson '00 creates with his piece, "In Time," a pounding, upbeat, in-your-face tap dance. Stasson has tried to go beyond the traditional expectations and conventions of tap dancing by livening up the stage with hard-hitting sounds and styles.

Kimberly Nastasi '00 has created her piece "The Enchantment" to tell a story based on a myth that follows two young lovers through their struggle with evil, exploring the human passions of love, desire, obsession, jealousy and rage.

Chrissy Carter '00 is working with the senior members of the Dance Company to create "Senior Night," a final farewell to four years of dancing together at Bucknell. This piece gives each of the dancers an opportunity to project their individual personalities on stage.

For many of the dancers this will be their last performance at Bucknell. For four years they have amazed us with their movements, their rhythm and most of all their talent.

If you have never seen the Dance Company perform you are missing out, and this is your last chance to see these amazing seniors show off their hard work and ability for the last time at Bucknell.

Courtesy of Department of Theatre and Dance

Danna Frangione associate professor of dance and Kristy Kuhn '00 dance in "Celebration."

Student film festival on the way

By Courtenay Mastain

Spending a full week of sleepless nights in preparation for their farewell to the University, Theo Avgerinos '00 and Jeremy Walker '00 will present the campus with Hoodwink and Hooey Pictures Third Annual Student Film Festival at on Saturday, Apr. 29 at 7:30 p.m and Sunday at 4 p.m. in the Powers Theatre in Coleman Hall.

A culmination of four years of their solid efforts as founders and dedicated members to the campus' film club, the festival will feature a variety of shows created by accomplished seniors and the rising talents of underclassmen, ranging in length from extremely short—three minutes, to substantial — 25 minutes.

One of the major films, *Burg-Fellas*, a collaborative effort between Avgerinos and Walker as well as other seniors who have been with the club from its beginnings, marks the one and only time the two actually worked together as they ususally pursue individual projects.

With an all star cast including Jay Klaitz '00, Carlos Rossi '00, James Rizzo '00, Micah Schweizer '00, Dan Spink '00 and Walker, *Burg-Fellas* chronicles a day in the life of Tony, the head of a Lewisburg mob-family, played by Avgerinos who calls the film "a sizeable satire playing on *The Sopranos*, *Goodfellas* and *The Godfather*."

Completing the interdepartmental major he designed in film studies, Avgerinos will show an originally written and directed film about a young idealist at the edge of his life as he meets a wandering vet hiker at an overlook, starring Gary Grant, professor of theatre, and Roger Sica entitled *Over Smoke*.

In addition to entertaining audiences with the ingenious creativity of Hoodwink and Hooey's founders, the festival will include films from aspiring filmmakers.

Russ Munson's '01 epic comedy *Spinnage* deals with the challenges one faces when trying to become the best ping pong player. In the festival's first documentary, Walker and Schweitzer collaborated to bring alive the experience of the American worker. Walker will also show *Romeo and Julian*, his satire on Shakespeare's classic play, illuminating the phobias of the interminably ridiculed campus.

The future of Hoodwink and Hooey, Eric Hart '01, Craig Laskowski '02 and C.J. Swenson '02 will also show their work while Mike Potts '00 will premiere his final film.

HOODWINK & HOOEY PICTURES PRESENTS:
a THEO AVGERINOS film
When a young idealist meets a wandering vet...
OVER SMOKE
Roger Sica & Gary Grant
Premiers at the Spring Hoodwink & Hooey Film Festival
April 29, 7:30 - April 30, 4:00
Powers Theatre, Coleman Hall

Avgerinos and Walker's dream of a student run filmmaking club, which they cultivated within their first meeting in an acting class freshman year, has reached tremendous success. "Our club has had over a hundred members, produced more than a hundred films, held previous festivals, inspired alumni to seek film careers, and helped jumpstart student and faculty interest to create a film studies minor on campus, available next fall," Avgerinos said.

As their college experience comes to a close, Avgerinos and Walker will have left their mark on the University, "the festival is our final and greatest goodbye to Bucknell as we've brought myths, art and entertainment to campus for the past for years through Hoodwink and Hooey. I'll miss it all when I'm gone, but then again, that's why Walker and I plan to take over the movie world next!"

ALTERNATIVE ENTERTAINMENT
Events in our area you may not even be aware of!

By Katie Parker

RESTAURANTS:

Elizabeth's Bistro: Downtown Lewisburg, across from the Campus Theatre. Open Wednesday-Saturday for lunch and dinner. Reservations necessary. Wonderful food and an amazingly cosmopolitan atmosphere make this an excellent choice for a romantic meal or for a special occasion. But we do mean SPECIAL: Elizabeth's is a little on the pricey side, and if you are a picky eater, you may not like their limited, seasonal menu. It's definitely a place to think about if you are looking for an expensive alternative to the Bison.

Market St. Deli: Downtown Lewisburg, across from the gazebo in the park. Open every day until 4, later on weekends. Great deli-style sandwiches and a homey, family atmosphere makes this a personal favorite for weekend lunches. As the weather gets nicer, get your food to-go and have a picnic in the park.

BOWLING:

Imperial Lanes: Milton, take Rt. 405 for about ten minutes, it's on your left. Open every night until midnight. Really college-oriented, this small bowling alley offers good rates and Rock'n'Bowl (a DJ and glow-in-the-dark bowling) for college students on Tuesday nights. Lots of Bucknell bowlers have already discovered this place, so don't be surprised if you see some friends there. They also offer four pool tables and a variety of arcade games if you're not into bowling. Prices are reasonable. Call ahead for reservations, especially on Weds-Fri, because of league bowling.

CAFES:

Cafe Latte: N. 3rd St., very small, around the corner from CVS Pharmacy. This small, family-owned business on 3rd St. is an excellent place to relax. Besides the town regulars, you can see the occasional Bucknell student reading a book over a cup of joe. The coffee is excellent, the company is always good, and despite being very small inside, you also have the possibility of sitting outside on the porch to enjoy a sunny day.

SECOND REMINDERS: IMPORTANT EVENTS YOU DON'T WANT TO MISS!!!!

April 28th, all day: Arbor Day. Plan to plant a tree. Do it yourself! Wal-Mart's Garden Center offers small trees for planting, as well as other plants if you don't feel like making the big project for a tree. Or, do it as a group — by contacting the National Arbor Foundation at www.arborday.org, you and your friends can receive ten trees for $10 as well as information on how to plant, where to plant, and how to help out with their many other causes.

April 28th - May 7th: The 31st Annual Lewisburg Arts Festival. The whole town of Lewisburg will be transformed for this tradition, with arts & crafts booths up and down Market St. and events ranging from performances by local musicians to a pet parade for children and their pets. Pick up a schedule of events at the Bookseller's downtown, or just show up during these dates for a fun and welcome escape from exam week. Come out and support the local Arts Council and your local community of artists.

April 29th, 10 am to 5 pm: 23rd Annual Renaissance Jamboree: Downtown Bloomsburg (rain or shine). This community fair, featuring arts & crafts, non-profit food and games, booths, entertainment and rides (just to name a few) will be taking place in downtown Bloomsburg approximately 25 minutes away, east on 80. Take a break from all that studying and act like a kid again!

For any further information related to upcoming events in the Susquehanna Valley, or for help planning personal weekend excursions for the arts, email klparker@bucknell.edu.

Second Chrysalis Ball coming to campus

By Erica Delsandro

The tradition continues! The Second Annual Chrysalis Ball is this Saturday, April 29th — do you have your ticket? Once again, Bucknell University is hosting the event of the season and you are invited to take part in the tradition.

The Chrysalis Ball, a gala event, fosters true Bucknell community spirit by bringing together students, faculty, staff and alumni for an evening of elegance and enchantment.

The Chrysalis vision began early last year. Page Hall '99, was working on the Traditions Task Force, an organization dedicated to reinforcing and fostering Bucknell traditions.

She was committed to the value of traditions, however was discouraged by the lack of such on campus. Hall wanted the University to be an institution whose spirit and tradition was valued as well as apparent. It was from this that Chrysalis was born.

Last year, Bucknell was introduced to the first Chrysalis Ball. Members of the Bucknell community, students and faculty, alumni and staff, came together to share and celebrate.

Because the first Chrysalis Ball was a success, it is now intended to become an annual event.

A year later, other Bucknellians who share Hall's dedication and a commitment to tradition work to continue the success of Chrysalis. Once again, the entire Bucknell community is invited to partake in what is the newest campus tradition.

For the second year, Bucknell University will host the Chrysalis Ball in the hopes of once again creating an elegant evening for all Bucknellians to enjoy and share.

What better way to reinforce a new tradition than by welcoming it into the new millennium?

This year, Chrysalis is a countdown to the new millenium and a celebration of the traditions that span the century. This year, the band Standing Room Only will be delving into the musical archives as they serenade Bucknell with favorite tunes from the decades.

To truly recreate the party of the century, the Fieldhouse will be transformed into Central Park with the New York City skyline on the horizon.

In this way, the Bucknell community can join together to welcome the new millennium while celebrating the traditions that make up a century.

Surely there is no better way to strengthen an up and coming Bucknell tradition than by making it an event honoring the value and importance of such traditions. So, come dance through the decades at this year's Chrysalis Ball.

Chemistry majors recognized at Bloomsburg

Two University students receive second place at the Intercollegiate Student Chemists' Convention for chemistry research

By Monica Montgomery

Patrick Farrell '01 and Jeremy Pronchik '00 were recognized last weekend for their outstanding achievements in chemistry at the 64th Annual Intercollegiate Student Chemists' Convention (ISC) held at Bloomsburg University.

Brian Scaria '00 was also nominated and represented the University at the convention.

The ISC awards a first and second place prize in five areas of chemistry: analytical, organic, inorganic, physical and biochemistry. Out of 10 students in each category, Farrell won second place for analytical chemistry and Pronchik took second place for physical chemistry.

Under the supervision of their research advisors, Associate Professors of Chemistry Timothy Strein and Brian Williams, Farrell and Pronchik researched their respective topics last summer while Farrell continued his research over this past year.

"All three [students] gave really good talks," Strein said.

Williams said, "The presentations were very professional, given the level of the students. [Their presentations] would have stood up well at a professional chemistry conference. It was very beneficial for all the students."

Farrell's research topic was "Using Ferrocenes as a probe for activation of carbon fiber microelectrodes: laser vs. electrochemical treatment." The presentation centered on using 11 micrometer fibers to measure current, examining electron trasfer and reversability of electrodes.

Pronchik presented "Computational analysis of solvatochromic behavior as found in 2-DCN." The presentation focused on the changes in spectra due to solvent interactions.

Scaria's presentation focused on "Binary solution interaction via viscometry and densitometry," which measured the temperature changes, viscosity and density of liquid measures and fit them to mathematical functions.

There were several schools that were involved in the competition, including Bloomsburg University, Chestnut Hill College, Elizabethtown College, Franklin and Marshall College, Gettysburg College, Goucher College, Indiana University of Pennsylvania, Juniata College, Lycoming College, Muhlenberg College, Seton Hall University, University of Delaware and Ursinus College.

The ISC Convention is an annual event that is held in April, in which the University students are encouraged by the faculty to attend.

"This is something that we try to encourage students to participate in," Williams said.

This year, Farrell and Pronchik were both awarded by the ISC with wooden plaques.

"I'm happy, and even though I didn't win first place, it was a good learning experience," Farrell said.

Both students felt that the competition was not cutthroat.

"Students were nervous, and you could tell, but everyone was very friendly and supportive," Pronchik said.

"It was good to get out there and present yourself. Especially if you are interested in your topic," Scaria said.

There were two judges for each section; however, Farrell, Pronchik and Scaria presented their research to a large group of students and faculty.

Three of the judges were from the University. Associate Professor of Chemistry Alison Draper, Visiting Assistant Professor of Chemistry Kevin Gwaltney, and Professor of Chemistry Charles Root judged the sessions on organic, inorganic and biochemistry.

"I had a little bit of school spirit in my presentation—I had a little bison on my front page," Pronchik said.

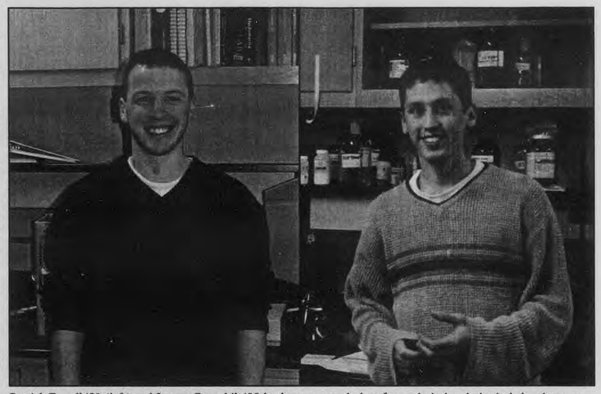
Farrell and Pronchik were both heavily influenced by their high school chemistry and science teachers, and that influence has continued with their favorite University professors.

"The chemistry department [at Bucknell] is very solid," Pronchik said.

Pronchik was recently inducted into the Phi Beta Kappa society and was also awarded the American Chemical Society award for Outstanding Performance in the Susquehanna Valley. After his graduation this spring, Pronchik plans to work for a year before continuing on to medical school.

Farrell was accepted into the combined B.S./M.S. program at Bucknell, which allows him to complete his Bachelor of Science in Chemistry by the end of his senior year and receive his Masters at the end of the following summer. He plans to continue his education at a graduate school in forensic science.

Previous winners of the ISC include David Daycock '00 and Mike Dorwart '00. Both received first place awards for their presentations in analytical chemistry for the 63rd annual Intercollegiate Student Chemists' Convention.



Patrick Farrell '01 (left) and Jeremy Pronchik '00 both won second place for analytical and physical chemistry, respectively at the Intercollegiate Student Chemists' Convention held at Bloomsburg University on April 15, 2000.

Book review: *The Cluetrain Manifesto*

The Internet is transforming communication, spelling the end of business as usual

By Matthew Trunnell

Breaking out of the tried-and-true standards for just about everything, *The Cluetrain Manifesto* is a must-read for anyone who expects to have a job in the next decade.

Old guard capitalists should take cover as Locke, Levin, Searls and Weinberger explore the impact of the Internet on business operation. From the most fundamental levels of intra-business communications to the disgusting, faceless public relations "key messages," the corporation is being turned on its head.

It all started late last year, when the four authors developed 95 theses based on their collective experiences in several high-tech companies, including IBM, Sun Microsystems, the *Linux Journal* and NPR. They published these theses relating how the playing field is rapidly changing at *www.cluetrain.com*.

From the revelation that "markets are conversations," the theses develop how consumers can use the Internet to converse with each other—building a virtual powerhouse of consumer knowledge.

For example, thesis No. 2: "Markets consist of human beings, not demographic sectors." No. 6 reads "The Internet is enabling conversations among human beings that were simply not possible in the era of mass media;" No. 20, "Companies need to realize their markets are often laughing, At them." And No. 26, "Public relations does not relate to the public. Companies are deeply afraid of their markets."

Since their website became popular, the four have expanded on these tenets in eight essays which make up the book, with each essay providing compelling examples and argument.

Central to their argument is the concept of voice—how we as consumers have lost input into the companies we buy from and how the voice of those companies has lost its human quality.

"We are all victims of this assault on voice, the attempt to get us to shut up and listen to the narrowest range of ideas imaginable," Weinberger writes. Meanwhile, the Web is only widening the "range of ideas" that people can listen to—and participate in.

Also attacked in the book is the empire of advertising. Thesis No. 74: "We are immune to advertising. Just forget it." Sound familiar?

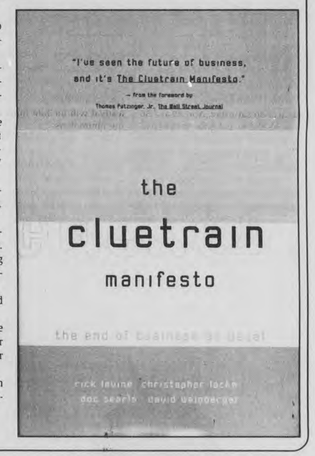
Public relations and advertising is where corporations have lost their voice—and consumers know it. Instead of hearing "key messages" from the marketing department, customers want to converse with real employees - whether to complain or make suggestions.

Instead of Public Relations, Searls writes, it should be called Private Relations.

But do not mistake *The Cluetrain Manifesto* to be another book on management philosophy, or another management fad. The authors make no claims for ten-point plans to rejuvenate old business.

Instead, the point is to reinstate voice—human qualities—back into the lifeblood of companies. Humor. Honesty. Real conversation.

All aboard the *Cluetrain!*



"I've seen the future of business, and it's The Cluetrain Manifesto."

Artistic merits of iMac triumph over traditional PCs

By Matt Laszewski

If I asked you what comes in five fruity flavors, is available in stores everywhere and has had numerous imitators since it's introduction, what would you guess I was talking about?

If you said LifeSavers, you get credit for trying, but the candy I'm talking about costs a thousand dollars a package ... a little steep for your average roll of 15 O shaped sweets.

I'm talking about the iMac, the computer that is being hailed as the next revolution in the computer industry. The last time anyone talked this much about a conglomeration of plastic and wires was when Apple Computer introduced the original Macintosh back in 1984. Those machines were credited with bringing computers into the mainstream and are now so famous that they have earned themselves a place in the New York Museum of Modern Art.

What made the original Macs so popular was that they were designed for the masses. They were unobtrusive and unthreatening as opposed to the big mainframes that had come before them.

However, since those original Macs made their debut, other companies in the industry haven't adhered to the philosophy of simple and unobtrusive design. Since the original Macs were released, computers have come in a series of fairly similar sedate boxes, which were usually a beige or just plain boring gray color. They were designed to look mysterious, ominous and complicated. While this look served to elevate the stature of those who were able to understand and use them, it left the majority of the population uncomfortable and wary of them.

When the iMac debuted, it was obvious that Apple had left behind these unimaginative design conventions. Everything from the shape of the machine to the color and even the price was new and different.

When computer gurus saw it they hated it. "Too gaudy" some said, still others thought it was "clunky" or "just plain silly."

Those reactions were just what Apple was looking for though because the iMac wasn't targeted at these young male, violent video game playing, computer-programming individuals. Instead, it seems that just as they had in 1984 with the release of the original Mac, Apple was aiming at an entirely new market for its products.

The first departure from standard designs is the fact that they are translucent. By making the machines clear, people could peer inside and see what it was they were buying. No longer was the computer a magical "black box" whose inner workings were impossible to decipher or barely even grasp.

While the iMac certainly didn't explain to its users how it worked, allowing them to peer inside still removed a great deal of the mystery and mystique present in other computers.

Courtesy of apple.com

Also unique to the iMac was its shape and physical design. Again, rather than the standard box that sits under the table, the iMac is one giant unit that rests in plain view.

It's easy to see why some would say that the iMac looks more like modern art than a modern machine since it has smooth and graceful curves rather than hard edges found on most computers. The soft lines also serve to give the machine a less forbidding look. No one would ever think of hugging or taking a bite out of an old computer, but that is in fact the main thrust of a multi-million dollar ad campaign that includes posters showing the five new colored machines and simply the word "YUM" in big bold letters.

The colors serve to help users feel less threatened by the machines. In a recent press release from Pantone Inc., representatives from the company discussed the effect that colors have on people. Pantone is an Apple business partner specializing in color control software mainly for publishing.

The new iMac colors are said to "offer consumers the opportunity to express themselves and bring an element of personality to their work space."

The soft lines also serve to give the machine a less forbidding look. No one would ever think of hugging or taking a bite out of an old computer, but that is in fact the main thrust of a multi-million dollar ad campaign that includes posters showing the five new colored machines and simply the word "YUM" in big bold letters.

The different colors are often associated with different personality types. Blue, for example, is one of the most popular colors in the United States and is commonly associated with virtues like consistency and truth while grape on the other hand signals a passionate and magical person. One can be assured that when these computers were designed, this information was part of the creative process between Apple and Pantone.

While the scientific basis for statements like these might be slightly questionable, there is no getting around the fact that when people see these machines they evoke emotions not normally associated with computers. In fact, it's even safe to say that until the iMac's debut, it was uncommon to associate any emotion with computers, except maybe frustration.

Although Apple and its co-founder Steve Jobs are credited for this "innovation" in computer design, it may in fact be slightly erroneous to say that they did any more than simply realize a new trend in the global economy and act upon it.

Corporations and designers recognize that color can evoke emotions, including ones that will make a person purchase a computer. The corresponding trend toward more color in products on the market did not start with the iMac.

Pantone said in a press release that this year has seen a dramatic increase in color on the fashion runways.

Other products too can be identified which predate the iMac but have profited greatly, sometimes even in the face of superior competition, simply because color and style were two major elements of their designs and not their competitors. For example, the new and hot selling Volkswagen Beetle shares the same type of rounded futuristic design as the iMac.

Whatever the reasons may be for our society's recent infatuation with aesthetically pleasing designs for machinery, there is no denying that in a world of greater and greater competition companies have decided to include form and style as part of their design process.

We as members of this society can sit back and enjoy the modern art in our midst. What a wonderful country we live in where even the pot-scrubbers look good.

The danger of date rape drugs: One drink is all that it takes

By Emily Carter

Recent studies show that one in four women are raped in their lifetime. Faced with this terrifying reality, women must be constantly aware of the dangers they face.

For many of us, this is quite difficult. We want to have a good time without worrying about the numerous ways in which our bodies can be violated. So, often, we choose to ignore the statistics and think ourselves to be in control of any given situation. But what if you are not in control? What if there is no way you could fight back? What if you were unconscious?

Unfortunately, these questions are far from hypothetical. As most of you are probably aware, a rising number of sexual assaults have occurred as a result of date—rape drugs. When slipped into a drink, these drugs are colorless, odorless and are unbeknownst to the victim. The most commonly used drugs, Rohypnol and GHB, are unfortunately all too accessible.

Rohypnol, also known as "roofies," is illegal in the United States. The drug takes effect 15 to 30 minutes after ingestion, producing a drunken appearance and possible unconsciousness. This altered physical state makes fighting back impossible. Roofies may also result in memory loss so a victim may be incapable of accurately recounting the rape or taking legal action.

GHB, commonly known as Liquid X, becomes toxic if mixed incorrectly or if mixed with alcohol. Fifteen to thirty minutes after ingestion, the drug produces symptoms of dizziness and confusion and may result in a coma or death. Just four hours after ingestion, GHB is not detectable in blood, but traces may remain in urine for up to 24 hours, so it is essential that a victim go for help as soon as possible. Because of its harmful side effects, GHB was not approved by the FDA in 1990. This has, however, failed to solve the problem. Since 1990, there have been 58 GHB-related deaths, and

more than 5,700 overdoses reported to the Drug Enforcement Agency. Additionally, drugs related to GHB are sold over the counter as sleep aids and muscle builders.

Date-rape drugs cause a person to be intoxicated to the point of helplessness. Imagine the possible scenarios:

1. You watch as your attacker rapes you, but are unable to move a muscle, even to scream.

2. You wake up in someone else's bed, completely undressed, with no memory of the night before.

3. You never wake up.

Consider the real-life story of fifteen year old Samantha Reid, who was drugged by three men at a party outside Detroit in January, 1999. After drinking a soda containing GHB, Reid slipped into a coma and died the next morning. Two of her friends were also drugged but both recovered from the incident. The drugging resulted in the nation's first trial involving GHB-related death. Four men were put on trial this year, three for manslaughter and one for being an accessory to the crime. Last month the defendants charged with manslaughter were sentenced to at least seven and up to fifteen years in prison. Reid's death, and the court case that followed, have resulted in increased nationwide awareness of the danger of date-rape drugs.

As summer begins, students will likely be in new and unfamiliar places. When in a bar, a club, or at a party, be aware of your surroundings. Take these necessary precautions:

—Open your own bottles and cans and pour your own drinks.

—Keep an eye on your glass at all times. Do not leave your drink unattended.

—Don't drink anything that looks or tastes unusual. Beware of drinks that taste salty or soda that is flat: these can be signs of GHB.

—Don't drink from a punch bowl or other open containers.

—At a bar or a club, only take drinks from the server.

—Watch out for your friends. If someone appears disproportionately intoxicated in relation to the amount of alcohol consumed, they may be in danger.

—Anyone who has been drugged should be taken to the emergency room as soon as possible. If you suspect that a friend has been drugged, call 911 immediately.

TECHNOLOGY EDITORIAL

How AMD did it

Rick Hoskinson, S&T Editorialist

Many are quick to criticize Intel for their dominance of the microprocessor market over the last 20 years. Many accusations of technology stagnation and "controlled progress" have been leveled at the mega-corporation. For years only a few "bargain basement" competitors have been willing to challenge Intel's hold on the PC market. The reality, however, is that microprocessor manufacture is one of the most difficult industries to break in to.

Recently though, an old company has picked up a few new tricks. American Micro Devices (AMD) is finally providing real competition for Intel's processor monopoly. Their newest line of microprocessors has surpassed Intel in both speed and price.

For years AMD worked in the shadow of Intel. The company produced inexpensive alternatives to the Intel architecture. Their low-cost chips were fraught with compatibility and manufacturing problems. Most of the chips were reverse engineered versions of their Intel counterparts. Consumers could expect to get exactly what they paid for—an inexpensive knockoff.

The history

AMD's problem wasn't in their R&D departments. AMD and Intel had similar origins. Both were "Fairchildren"—companies that started after several unhappy engineers left Fairchild Semiconductor in the late 60's. Both were founded in 1969 by groups of talented engineers. Since it was a fledgling company, AMD had little in the way of real funding.

Intel, however, received a huge initial investment from Art Rock, a successful venture capitalist at the time. Intel's Fred Moss and Federico Faggin were able to use their ample resources to produce the world's first microprocessor, the 4004. For the next two decades, AMD would be playing catch-up to Intel.

AMD's woes did not end with the technology leap. Microprocessor manufacture is one of the most complex industrial processes ever conceived. Over 250 separate steps are taken to produce each chip. The conditions are amazingly sanitary, for a single speck of dust can spell disaster for one of the complex machines used in manufacture.

As a result, the cost of a microprocessor fabrication factory is immense. AMD simply did not have the funding needed for adequate manufacture.

With little share in the PC market, AMD spent most of its research dollars on proprietary chip and memory design. This proved disastrous in 1986 when the Japanese silicon manufacturing markets opened up. In less than a year, AMD was a company struggling to survive. In 1989, AMD was forced to look to other markets, as the extremely low cost of Asian semiconductors was putting them out of business.

By now, AMD was seriously looking to break in on Intel's PC monopoly. In 1991, after a five-year arbitration, AMD was awarded rights to manufacture 386 processors. Unfortunately by this time, Intel was well ahead of AMD in terms of research and market power. AMD was in for 7 years of playing catch up to the Intel R&D machine.

With AMD's newest fabrication plants in place, it was able to unveil it's Pentium III—killer in 1999.

Success

The AMD Athlon (K7) microprocessor is both faster and less expensive than the current generation of Intel microprocessors. With this new chip, AMD has finally overcome its initial setbacks and beaten Intel at their own game.

The next few years will be interesting for microprocessor markets. Both Intel and AMD are looking into the high-end markets with their next processors. Their chips are a significant leap over the current generation of PC microprocessors and could bring about a massive change in the way computers are used. Many companies including IBM, RedHat, Microsoft, and Compaq, are very interested in what significant changes these new chips may bring about.

Sleeping beats cramming, researchers say

Lynne Waldman

It's the night before the monster exam that could make or break your grade for the semester.

Like every other college student who's mastered the fine art of procrastination, you've let your reading pile up on you, your work escape you, and now (24 hours and counting till Armageddon) you dust off your book, crack it open for the first time and sit down for a serious all-night cramming session.

Despite professors' warnings to study class material each day,

cramming has long been college students' study method of choice. However, biologists are now joining professors in this fight against cramming.

By beginning to unravel the biochemical basis of memory formation, biologists have found convincing evidence that attacks this favored study method.

Their conclusion: staying up all night—with blood-shot, burning eyes, hand clenching your double mocha espresso, madly studying material covered during the last month of class—will not help you pass your exam, period.

Recalling material for an exam requires that the topics has entered your long-term memory. If information is to be retained for 24 hours, it is said to be committed to long-term memory, whereas information in short-term or working memory is held onto for a mere 15 to 20 seconds.

According to Drs. Alcino Silva, Tim Tully and Jerry Yin of Cold Spring Harbor Laboratory, on Long Island, the molecular switch critical in the creation of long-term memories is the protein CREB. CREB is present in nerve cells in both an activator form and a repressor form.

Activator CREB turns on genes needed for long-term memory formation, and repressor CREB acts as a filter that prevents the storage of unnecessary information by inhibiting activator CREB. Therefore, either the removal of CREB repressor or increased levels of CREB activator is necessary for nerve cells to create a lasting memory.

Since the quantity of information that can be stored in long-term memory during a study session is limited by the amount of CREB activator within nerve cells, students can only learn so much material before using up their activator CREB.

The bottom line is that shorter study sessions allow activator CREB to be recycled and thus operative for the next bout of studying, while cramming depletes nerve cells of activator CREB, making them unable to store information in the long-term memory.

Interestingly, the double mocha espresso you down while trying to jam information into your brain may biologically aid your last-minute pursuit of knowledge.

Rolipram, a compound found in coffee, inhibits the activity of repressor CREB, allowing more activator CREB to be available for memory building.

Despite evidence that espresso, cappuccino, and the like may help boost your active CREB levels, don't take this information as license to infuse yourself with massive amounts of coffee.

As coffee addicts are well aware, these liquid stimulants come with unfavorable side effects, and biologists know that cramming while on rolipram is far from being a perfect substitute for spacing your study sessions.

Instead of pulling an all-nighter cram-session, you should simply go to bed. Think about it—with your brain cells drained of activator CREB, material will seep into your long-term memory just as fast through osmosis.

At this point, I know what you're thinking, "Yeah, yeah, this is all well and good, but I swear cramming works; I know from experience."

Like you, I was convinced in the power of cramming when I first learned about CREB. Having spent many sleepless nights cramming for exams and believing I have learned more material than humanly possible during the wee hours of the morning, I would have sworn on my life that cramming is truly an effective study method.

Biological evidence, however, implies that students' faith in cramming is solely based on the psychological confidence it gives them prior to an exam. Because of the power of mind over matter, you may continue to cram like mad for raw self-assurance. Just know that your cramming won't result in creation of neural pathways needed for long-term memory, and if you're at all like me, the only biological outcome of an all-night cramming session will be a bad cold for the next two weeks.

Still, it's probably inevitable that you will find yourself cramming even after reading this article. At least you now know that your rolipram-loaded beverage from the café will assist you in your last hurrah of studying and that you can tackle your exam with psychological confidence.

Do not be quick to blame parents

By Monica Montgomery and Allison Karbonik

It has probably crossed your mind that there are some people that "just don't get it." It might be your roommate, or even the guy down the hall. One of your friends might be a bit slow to pick up on a joke.

Well, do not blame that kid's parents for dropping him or her as a child. It is just the way that he or she was brought up.

For many years, researchers have debated the issue of nature versus nurture. Nativists believe that a person's biological makeup determines their actions and personality. They believe that people develop according to certain predetermined stages that unfold as they develop.

Environmentalists believe the opposite from nativists. They believe that all knowledge is acquired through experience. People learn and develop from their perceptions of their surroundings.

We all know that genes affect some of our personality traits, and you can usually pick a parent that you are more "like." Now scientists are looking into a connection between genetic makeup and humor.

According to *New Scientist Magazine*, your sense of humor does not come from your genes, but rather from the environment in which you grew up.

> *Your sense of humor does not come from your genes, but rather from the environment in which you grew up.*

Biologists in London were surprised to find that a reaction to a Gary Larson cartoon had nothing to do with human genes.

Tim Spector and Lynn Cherkas, researchers at St. Thomas' Hospital in London, studied 71 pairs of monozygotic (identical) twins and 56 pairs of fraternal twins. By taking each twin into a separate room, they were asked to rate five "The Far Side" comics on a scale from 1 to 10.

The results showed that while siblings do have similar views, the identical twins were no more likely to agree than fraternal twins. Identical twins share exactly the same genes, while fraternal twins share only half the genes, similar to regular siblings.

"This is interesting, because twin studies of personality traits almost always show genetic effects," said Robert Plomin, a behavioral geneticist at the Institute of Psychiatry in London.

Identical twins are usually similar in many other personality traits. Researchers have studied similarities between identical twins who are raised in different environments. In most of these studies, monozygotic twins have similar personalities and intelligences.

Everyone agrees that the study on humor, however, needs more research.

"I would like to see a larger study confirm the findings, and it may be that the results depend heavily on the specific nature of the study," Plomin said.

Spector agrees his team needs to perform a more thorough examination of the recent findings. He hopes to do more research into humor, especially sexual innuendos.

So next time you crack a joke and someone does not pick up on it as quick as everyone else, or maybe they just don't find it funny, remember that they were just raised a bit differently.

The Bucknellian Sports

Athlete of the Week

Matt Potalivo '00, a Bison pitcher, who in his first career at-bat smacked a homerun to dead center in Bucknell's 17-6 victory over Susquehanna.

Bison move into second place

Orange and Blue buoyed by outstanding pitching performances over the weekend

By Andrew Bevan

After a tough defeat at the hands of St. Bonaventure, the Bucknell baseball team got back on the winning track by sweeping their four-game series with Lehigh this past weekend.

Last Thursday the Bison went up against St. Bonaventure in a non-conference matchup. The Bison fell behind early after the Bonnies jumped to a 2-0 lead in the top of the first. The Bison responded with three runs of their own to take a one-run lead after the opening inning. Senior tri-captain Frank Frescони hit his tenth home run of the year to put the Bison up by a run.

However, the Bonnies came right back in the top of the second, plating four runs and scoring four more in the top of the fourth to take a 10-3 lead. St. Bonaventure put three more runs on the board in the following inning to take an insurmountable ten-run lead. Bucknell's bats went silent after the first, with the team only registering two more hits throughout the rest of the game, as the Bison fell 15-6.

Eric Fishman '03 went 2-4 at the plate with a triple to lead the Bison offensively. Sophomore Blaine Sharpless was the most effective pitcher for the Bison, throwing four innings of four-hit baseball surrendering three runs and striking out three.

"I was disappointed that we did not hit well. It was one of our poorer performances all year," head coach Gene Depew said.

Then the Bison turned their sights to Lehigh in a very crucial series for them and their postseason hopes.

In the first game of the series on Sunday, the Bison edged out the Mountain Hawks in a pitcher's duel, thanks to a four-run fifth inning that gave them a 5-3 lead. The Mountain Hawks could only manage one more run the rest of the way and the Orange and Blue took the first game of the series, 5-4.

Scott Perry '00 put in a masterful performance on the mound for the Bison, going the distance while surrendering three runs on four hits, and striking out six while only walking two. Juniors Brad Gething and Ian Joseph sparked the Bison offensively, each going 2-3 with three RBIs.

In the second game the Bison got out of the gates quickly, plating six runs in the bottom half of the first. Ed Soley '00 continued Bucknell's streak of excellent pitching, taking a no-hitter into the sixth inning. Soley shut out the Mountain Hawks on four hits, while only walking two and striking out seven in a complete game effort. Soley was named Patriot League Pitcher of the Week for his performance.

Tim Choate—The Bucknellian

The baseball team is looking to beat Army this Saturday and Sunday.

Joseph and tri-captain Tyler Prout '00 both went 2-4 with an RBI for the Orange and Blue. Junior first baseman Russ Lindberg had a breakout game, going 3-4 with five RBIs at the plate. Lindberg had a double and two triples as the Bison cruised to a 13-0 victory.

The teams played another doubleheader on Monday. After giving up a run in the top of the third, the Bison evened the score at one in the bottom of the sixth, thanks to a sacrifice fly from Frescони.

In the bottom of the seventh, Fishman got things going for the Bison with a leadoff pinch-hit single up the middle. Senior Rick Ciccione then came in to pinch hit as well and executed an excellent sacrifice bunt to put Fishman in scoring position with one out. After Chris Herron '01 struck out, the Mountain Hawks intentionally walked Joseph to bring junior outfielder Kevin Eiben to the plate. Eiben came through in the clutch, connecting on a line drive over the left-fielder's head to score Fishman and give the Bison a 2-1 victory.

Tri-captain Matt Potalivo '00 continued the excellent work of the Bison pitching staff, notching their third complete game and four-hitter, securing his fifth victory of the season. He walked three while striking out five.

"It was a good pitcher's duel. We played good defense and we got the hits when we needed them in the seventh to win," Depew said.

In the second half of the doubleheader, the Bison capitalized on several mistakes by the Mountain Hawks en route to an 8-1 victory. The Bison scored their first four runs of the game thanks to miscues from the opposing side. The Orange and Blue added four runs in the bottom of the sixth, two of them coming from a double to right field by Prout. Frescони and Prout sparked the Bison offensively, driving in two runs a piece.

Sophomore Chris Lackett put in a strong outing on the mound for the Bison, picking up his fourth win of the year, while shutting out Lehigh through the first four innings. Lackett ended up going five and two-thirds innings, scattering seven hits and giving up one run, while striking out six and walking three. Sophomore Gregg Farmery came on in the sixth with the tying run at the plate and picked up his first save of the year, giving up just one hit while striking out two.

"The second game was a matter of us again using the momentum from the first game," Depew said. "It was a great

American to enter Patriot League

By Chris Ellis

The Patriot League was searching for members that fit its mold. American University was searching for a league that better fit its academic mission. The result was a decision that, for now, keeps the Patriot League viable, but potentially could alter the member institutions' philosophies on athletic scholarships.

American University, a school of about 8,000 graduate and undergraduate students located in Washington, D.C., announced this week that it has decided to leave the Colonial Athletic Association (CAA) and apply for full membership in the Patriot League. The addition of American to the league still must be formally ratified by Presidents of Patriot League schools, but that approval seems to be a mere formality. As a result, the Patriot League will expand to eight full time members, and thus preserve its immediate health. Expansion of the patriot League had been a key concern for several years, and American's addition satisfies the League's desire to add members who fit the patriot League's athletic and philosophical profile.

"The patriot League had been very concerned with expanding its membership for quite some time," said Director of Athletic Communications Todd Newcomb. "It has been the thrust of the Executive Director's job to get the League headed in the right direction with expansion."

The addition of American allows the Patriot League to retain its automatic bids to the NCAA men's and women's basketball tournaments and also gives Patriot League institutions exposure to the Washington, D.C. market. In addition, American's presence will give Navy a natural rival and traveling partner. Bucknell administrators welcomed the addition of American as a school whose athletic and academic profile 'fits the mold' of Patriot League institutions.

"American is an outstanding addition to the Patriot League," said Director of Athletics John Hardt. "Not only is (American) a fine academic institution, but it has a very competitive Division I athletic program. But from an academic and competitive perspective, American was a very good fit."

American joined the Patriot League partly for athletic reasons but also partly because it wants to trim its athletic budget and enhance the University's academic reputation. In an interview with *The Washington Post*, American University president cited the Patriot League's 'strong academic reputation' and its ability to 'value athletics in an academic setting' as reasons to join the League. American was one of only three private institutions in the Colonial Athletic Association and didn't seem to be academically similar to the other CAA schools.

But even though American—with an undergraduate academic profile similar to Bucknell's and one of the best academic institutions in the Colonial Athletic Association—seems to be a good fit geographically and academically for the Patriot League, American's inclusion in the League alters the League's historic commitment to need based aid. American University currently offers athletic scholarships in all of its 14 athletic programs, and the Patriot League will allow American to continue offering scholarships. The Patriot League was a solely need-based league until two years ago, when it allowed schools to offer athletic scholarships in their basketball programs. The addition of American means that the Patriot League has shifted its stance again-the league now will allow all of its member schools to offer athletic scholarships in all sports except football. American does not have a football program.

The scholarship issue—which became extremely contentious when Holy Cross was first permitted to offer basketball scholarships—will likely become a major issue for Patriot League schools again.

"In many cases this raises a concern," Newcomb said. "In other cases, it raises the hope that Bucknell will have some kind of discussion along the lines of scholarships. This is an issue that threatens to take away the level playing field for schools like Bucknell. Schools like Colgate, Lafayette and Bucknell, schools which have held steadfastly by their need-based policy, may have to rethink their positions."

Hardt, despite recognizing the official change in Patriot League policy, does not feel that the addition of scholarships represents a major change in Patriot League philosophy. Army and Navy currently give all students de-facto scholarships in exchange for military service, Holy Cross and Lehigh offer scholarships for basketball, and the three other patriot League schools-including Bucknell-give some form of preferential grants to some athletes. The addition of American, then, would represent only a formalizing of Patriot League policy.

"There's probably more read into (the scholarship issue) than there should be," Hardt said. "The issues and policies for financial aid will now be left to the discretion of each individual institution. This is a policy that reflects an evolution of Patriot League philosophy—I don't think the addition of American represents any radical departure from existing policy."

Bucknell's role in a scholarship Patriot League can also be questioned. Bucknell, along with Lafayette and Colgate, currently does not offer full athletic scholarships to students.

"I don't see the dialogue on scholarships accelerating," Hardt said. "It's been an ongoing dialogue ever since the Holy Cross 'compromise' was implemented.... We have to make sure that we are assured a level playing field with the rest of the Patriot League schools."

The scholarship issue will likely be revisited in a year or two, after American beings play as a full-time member in the conference. For now, though, the addition of American assures that the Patriot League will continue to exist as an NCAA conference with an automatic bid to the men's and women's basketball tournaments, and may be the beginning of a process in which the Patriot League will add more member institutions—institutions which previously were not permitted to join the league because of their scholarship policies.

"The Patriot League simply cannot call itself a non-scholarship conference anymore," Newcomb said. "It's a scholarship conference now. I don't think that the league is going to sit back and be content with eight members, and ultimately, this decision opens the door for more expansion."

Athletes of the Year

Linebacker Shawn Redd '01 (right) was named first-team All-Patriot League and led the Bison in tackles. Redd's performance this season propelled the Bison to the Patriot League Championships.

Bison drop pair to George Mason

By Brooke Rea

The Bucknell softball team played its last two doubleheaders of the season Saturday against George Mason and Tuesday against St. Francis. Despite an impressive effort in all four games, the Bison were swept by both teams.

Over the weekend, the Bison showed their unstoppable spirit when they stepped up their play for the second game against George Mason, after being dominated, 7-0, in the first matchup earlier in the day. In the nightcap, the Bison played much more solidly, but came up just short, falling 4-1.

George Mason came out strong in the first half of the nightcap, scoring all four of their runs in the first three innings. After that, Bucknell was able to hold them in check and score one of their own in the sixth. Sophomore Jenna Demetriades plated BU's only run off of a double from Meredith Gill '03.

On Tuesday the Bison faced St. Francis and fell 6-5, 7-5 in two close and well-played games.

"We lost both games," said captain Kristina Tan '00. "But we fought hard the whole way offensively and defensively. It was a good way to finish up the season and also good preparation for the weekend."

In the opener, BU remained scoreless most of the game while St. Francis had two by the bottom of the fourth. In the fifth inning both teams plated two runs, bringing the score to 4-2. Bucknell's runs came off of a homerun by Tan and a run by Heather Janowski '02.

Stephanie Metz—The Bucknellian

Jenna Demetriades '02 at the plate.

In the sixth inning, Bucknell tallied another run off of a homer by Charity Ford '01. In the top of the seventh, BU's last two runs came off of RBIs by Demetriades and Lauren Titus '02, both doubles, but the Red Flash answered back with a two-run homer in the bottom of the inning. A strong offensive effort by both teams left the Bison falling short 6-5.

In the second match-up, St. Francis jumped to an early 4-1 lead in the second inning and Bucknell was never able to catch up. By the top of the third the Bison had cut the lead to 4-3 with runs by Ford and Nicole Zergebel '00.

Scoring was in the hands of the Red Flash for the next four innings, giving them a 7-3 advantage in the seventh frame.

But Bucknell refused to give up and plated two runs in the inning before St. Francis could claim the 7-5 victory.

Standouts in this game includ-

Men's tennis finishes season; looks to Patriots

By Mike Brophy

The Bucknell men's tennis team's very tough season continued last week as they faced up against Lehigh and St. Francis (PA).

Trying to improve their disappointing season record of 6-11, the Bison concentrated on the matches at hand. The first match pinned the team against Patriot League rival Lehigh. Winning two of the three doubles matches, Bucknell was up one point on Lehigh and was in prime position to win the match.

But as the singles matches began, the Bison saw the match slip away. In four of the six matches, Bucknell lost the first set.

In the end, the Bison posted two singles wins, with senior T.K. Kelly and sophomore Alex Davydov earing victories. Both of these matches went to three sets.

But Bucknell eventually lost four of the remaining singles matches, which swung the match to Lehigh, 4-3.

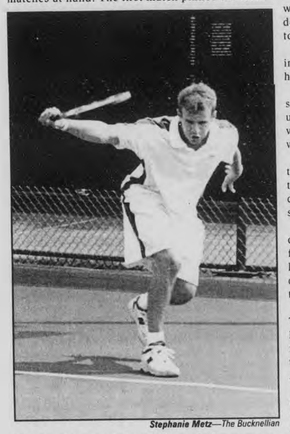
The next match proved to be better for the Bison, as they concluded their regular season schedule with a 5-2 victory over St. Francis (PA). This victory did not come as a surprise to the team, as it won all four meetings between the two schools.

In Kelly's final career singles match at home, the Bucknell senior unfortunately dropped a tough three setter (6-3, 0-6, 6-2). The rest of the team competed well, winning four singles matches and sweeping all three doubles matches.

Although Kelly lost his final home match, his career at Bucknell has been phenomenal. He is fourth place on Bucknell's all-time singles victory list with 43 wins. He also contributed greatly in doubles, winning a total of 42 matches, putting him third all-time.

This Friday, Bucknell enters the Patriot League Tournament. Coming in as the number five seed, Bucknell looks to seek revenge over Lehigh in the first round of the tournament. If all goes well with this match, the Bison would face off against host Army.

Coach Bob Hammerlee was optimistic about his team's chances. "We hope to get revenge against Lehigh and then to give Army the best match that we can give them," Hammerlee said.



Stephanie Metz—The Bucknellian

The tennis hope to redeem a disappointing season as the enter the Patriot League Tournament on Friday.

Football kicks things off with annual Blue-Orange match-up

By Joshua Gish

Linebacker Dane Helsing '03 returned an interception 25 yards for a game winning touchdown to give Blue a 14-7 victory over Orange in the Bison Football Spring Game.

Helsing, who was recently moved to linebacker from quarterback during spring practice, made it obvious that the coaches made the right decision as he stepped in front of Todd Wenrich's '03 pass and sprinted to the corner of the end zone for the game-winning score. "I was just covering my zone and the ball was right there," said Helsing. "I'm new at this position [linebacker], and I hope today was an indication of what I might be able to do there in the future."

Tied only with Mark Tallman '02, Helsing also shined with his team leading six tackles and tallied a tackle for a loss and four unassisted stops.

"Dane has had a big spring for us," said head coach Tom Gadd. "We moved him to a position that we think will allow him to make a big impact for us.

Early on, the Blue team led the contest until Orange quarterback Todd Wenrich '03 fired a bullet through traffic to his tight-end Greg Readinger '02 allowing him to step into the end zone. Following the successful point after attempt by Chris Lundberg '03, the Orange evened the score at 7-7.

Following Helsing's interception return, the Orange team failed to penetrate the Blue's defense again. This defense was held up through the work of Helsing who again showed his prowess as he broke up Orange's final possession of the day and enthusiastically ended a very successful game. Tallman was also credited with strong defensive action maintaining his position in the Orange backfield all game and tallying a tackle for a loss and a quarterback sack.

Similarly acclaimed was junior defensive end Matt Borich who recorded two assisted tackles and teamed up with Pete Christathakis '03 to apply the pressure on Wenrich that forced the defeating interception. Freshman Adam Minggia was also recognized for his play on the Blue team totaling five tackles at the cornerback position.

LaMario Bradwell '01 rushed for 62 yards on nine carries and caught three passes for an additional 57 yards . Jabu Powell '02 opened the game strong with a 78-yard blast to Gerald Funderburg '02 on a halfback pass but was held to just two possessions for 11 yards until he turned his ankle early in the first quarter.

Other notable players were fullback Matt Kawczenski '02 (who ran for 14 yards on three carries), tailback Ricco Rosini '02 (who tallied ten yards on two carries), and quarterback Chad Mehle '02 (who completed three of seven passes for a total of 57 yards).

Sophomore tailback Tony Varano led the opposing team's offense with a game-high 49 rushing yards in 13 attempts. Weinrich connected on 11 of 23 passes for 122 yards and added 29 yards on seven attempts. Readinger lead the receivers with three receptions for 60 yards while defensive back George Cowan '02 added three receptions from 19 yards and Varano three for 17.

The Blue defensive stronghold was upheld by Justin Lustig '00 and Darsean Johnson '02 with four tackles apiece and Joe Massey '03 who added two quarterback sacks and a forced fumble.

Readinger was named the most improved offensive player of the spring and Dane was named most improved defensive player of the spring.

The Bison will open their 2000 season on September 2 when they travel to Virginia for a 7:00 p.m. game with the Richmond Spiders. Bucknell's first home game is on September 16 against Cornell at 1:00 p.m.

BU coach earns honor from peers

By Jim Leahy

Bucknell University men's golf coach Tommy Thompson has been selected as the 2000 Patriot League Men's Golf Coach of the Year in a unanimous vote of his peers. This is Thompson's first coach of the year honor in seventeen seasons.

Thompson led his team to a second-place finish at the Patriot League Golf Championship last weekend. The Bison, who were picked to finish fourth in the preseason coaches' poll, turned in a two-day total of 914 to finish three strokes back of Navy.

On the links, Thompson has guided Bucknell to over 100 dual-match victories. He also coached the 1988 Colonial League champions and 1987 East Coast Conference champions. In his 30-plus years at Bucknell, he has also coached the baseball, tennis and junior varsity basketball teams.

As a head baseball coach from 1967-81, Thompson directed his program to one of the most dramatic turnabouts in Bucknell athletic history, guiding a team that finished 0-15 in 1968 to the Middle Atlantic Conference Championship and a 15-4 record in 1969.

Thompson, a 1960 Bucknell graduate, excelled as both a basketball and baseball player. He captained the basketball team and was a very successful pitcher on the baseball team. He later went on to pitch professionally within the Detroit Tigers organization for three seasons.

In 1986, Thompson was inducted into the Bucknell Athletic Hall of Fame.

Tennis winless in League

By Carmen Mauriello

The Bucknell women's tennis team fell to 4-8 overall and 0-4 in the Patriot League after suffering a 9-0 blanking by league powerhouse Army last Saturday. But this Friday and Saturday, the Bison and their rivals will throw their records out the window and compete in the winner-take-all Patriot League Championships this weekend at Army.

The Bison learned just how stiff the competition at Patriots will be when they traveled to West Point, N.Y. to challenge Army. The Bison didn't take a set in any of the six singles matches or the three doubles contests.

The most competitive match was played by freshman Laura Maisel at number five singles. She fell 4-6, 3-6, dropping her season record to 5-7 overall.

The top singles records for the Bison belong to Kary Wolford '02 at 4-4 and Kristen Inglis '02 at 5-6.

The Bison are optimistic about their chances of pulling an upset at Patriots. "Everyone's anxious to play," Maisel said. "We have a good chance despite our rough start [to the season]. Everyone's confident and looking forward to competing."

The Bison will lose their two senior co-captains, Kerry Callaghan and Tracy Honko, to graduation. Callaghan has compiled a 6-18 singles record in '00 with 11 of her 12 matches coming at the number one position. Honko's record this season is 10-14, with the majority coming at the number four position.

The leadership of the two seniors will be greatly missed by the Bison. Both have led the team through troubled waters in their careers.

"This season, in particular, has been up and down, but we've pulled together to make things positive," Callaghan said. "My best experience has been meeting my teammates. We've grown into a really close-knit unit."

"I have definitely had an incredible experience with tennis at Bucknell," Honko said. "It has added so much to my four years."

"Kerry has been such a great co-captain and friend," Honko added. "She has made all the obstacles we have overcome so much easier."

SOFTBALL from page B1

ed Titus, going 2-2 with an RBI, and Ford and Janowski going 2-4. Stephanie Morgan '01, Kerry Klein '03, Zergebel and Dugan all had one hit in the contest as BU outslugged St. Francis 10-7.

BU's regular season ends with a record of 10-25 in overall play. At the Patriot League Tournament this Friday the Bison are seeded sixth and will play third seed Lafayette at 3:00 p.m. Despite a rocky season, Tan is confident that Bucknell will make a good showing at the tournament.

"We have put the ups and downs of this season behind us and are prepared to be completely committed to the great opportunity we have in the tournament," she said. "Any wins and losses before this weekend are meaningless, but I think we've learned a lot about how to work together as a team."

Although Tan hopes for victory this weekend, she still keeps things in perspective. "No matter what happens this weekend," she said, "this is a great team of girls with a lot of heart and I have truly enjoyed playing with them."

The Blue and Orange lose only two seniors this year, returning 18 women and welcoming new recruits. "This is a young team with a ton of talent," Tan said. "As they grow and mature together, I am confident that they will become one of the most successful teams Bucknell has ever seen."

BASEBALL from page 1

combination of good pitching and errorless baseball."

A major reason for Bucknell's four-game sweep of Lehigh was the effective work of the pitching staff. The staff gave up only three earned runs the entire series and had three complete games and a great relief effort in the fourth game. They reduced the overall team ERA by half a run over the series, taking it from 6.20 to 5.70.

The Bison continued their season on Wednesday in their final regular season home game against neighborhood rival Susquehanna, turning in a dominating offensive performance en route to a 17-6 victory.

In the highlight of the game, Potalivo, who had never had an at-bat in his four-year career at Bucknell, connected on home run over the fence in left center. Outfielder Mike Ritz '01 had a home run as well, and freshman Zachary Allen picked up his first victory of the year. Prout was 3- 4 on the day with a triple and two doubles.

The Bison now find themselves at 20-21 on the year and in second place in the Patriot League with a league mark of 10-6, one game behind first-place Navy. After a non-conference matchup against Towson today, the Bison travel to West Point this weekend to face the Cadets in their last four games of regular season.

"If we can win three of these games, we can guarantee ourselves a post-season appearance for the fifth straight year," Depew said. "We need to have another successful weekend."

If the Bison sweep the weekend series and Navy stumbles against Lafayette, there is a possibility that the Bison could gain the top seed and host the Patriot League Tournament for the second consecutive year.

Also, this weekend represents the culmination of the careers of seven seniors who have left an indelible mark on the Bucknell baseball program.

Scott Perry, Ed Soley and Potalivo have 12 of the 19 wins and have pitched over half of the innings for the Bison pitching staff this year.

Prout is leading the team with a .399 average and is on the verge of breaking close six to ten school records. Fresconi, currently second on the team in hitting, is not far behind Prout, as he's close to breaking the school and league single-season home run record. Both Prout and Fresconi have had good years defensively, with Prout playing a very solid second base and Fresconi being a force behind home plate, especially this past weekend when we threw out three baserunners.

Unfortunately, the other senior pitcher, Mark Stetina, suffered a season-ending elbow injury after his second start of the year, in a game where he picked up a key win for the Bison against Lafayette. Rick Ciccione has served as a very effective role player for the Bison this year, playing both middle infield positions and anywhere in the outfield.

"We will definitely miss all of these guys. They will be difficult to replace," Depew said.

As Depew looks at next year's squad, he sees a very different team, as the Bison are losing three starting pitchers and their 3-4 hitters from the lineup.

"We have an outstanding junior class and there is a possibility that we could have nine seniors on the field next year," Depew said.

The Bison will return all three of their starting outfielders along with two starting infielders and two of their three catchers. Also, the Bison look forward to the return of senior pitcher Kevin McDowell.

"What kind of improvement our younger pitchers make and McDowell's return as a healthy contributor will be keys for us next year," Depew said.

Celebrating six decades in Bucknell athletics

A tribute to Brad Tufts

By Jared Silliker

Brad Tufts' first day of work at Bucknell was June 29, 1959.

He has not worked elsewhere since.

In that time, he found ways to touch countless people's lives.

Into his sixth decade in Lewisburg, Tufts has finally decided to call it quits after 41 years of service current Associate Athletic Director has served Bucknell in numerous capacities and has become a University icon—a ubiquitous image at University and athletic events. His institutional knowledge and loyalty are second to none.

"Quite simply, I'm not sure another person will walk through the doors of Bucknell University as committed and as dedicated to this University as Brad Tufts," Heather Lewis, head womens' field hockey coach, said.

Tufts plans to retire to Hilton Head, S.C. with his wife, Betty, who will also retire from the University this year. She is currently the Associate Director of Admissions. Their joint retirement comes with 34 years of marriage, after Mrs. Tufts began work in 1964 as the Assistant Dean of Women. The two were married in Rooke Chapel on in June 1966.

"Brad and Betty Tufts are what Bucknell is all about," Todd Newcomb, director of athletic communication, said. "When [Brad] leaves us, one of the University's most valuable resources will leave us."

New beginnings

Tufts first stepped foot on campus the day after graduating from Colgate University in 1959, and was soon hired as the Director of Sports Information. He was a go-getter from the very beginning.

He was supposed to start work on July 1, a Wednesday. But he called his first boss at Bucknell, Trennie Eisley, then director of Public Relations, and asked if he could just start on Monday.

"I will forever be grateful to [Trennie] for having the faith to hire me three months out of college," Tufts said. "She was so loyal and taught me a ton about writing, public relations and Bucknell."

In 1964, Tufts changed gears somewhat. In what he called the best thing professionally to happen to him at Bucknell, Tufts became the Assistant Director of Public Relations.

"I never thought of getting out of sports, but thought this would be interesting," Tufts said. With the move, Tufts became even more broadly exposed to aspects of the University. Tufts served as adviser to both The Bucknellian and L'Agenda, and edited Bucknell World (1976-80). He also became the men's golf coach in 1967 and served through 1975.

"The direct contact with kids is what keeps you going," Tufts said of his interaction with student-athletes. "You don't have to always agree with them-that's what we're all here for."

"His loyalty is incredible. I appreciate him being at every single game and traveling with John Hardt to Worcester, MA for the Patriot League Championship game," Kathy Fedorjaka, women's basketball coach, said. "It really meant a lot to the kids to have people there."

In 1980, the University moved Sports Information into the Athletic Department (a trend at many schools across the nation) and brought Tufts with it. He became the Assistant Athletic Director for Public Relations. Of his official move back to sports, Tufts said, "It was just time for a change, to do something different."

"In his 41 years at Bucknell, Brad Tufts has done as much as anyone I know to advance the broad interests and excellence of the University," President William D. Adams said. "It is very hard for many of us to imagine this place without him. He has been an excellent colleague and a good friend."

Influences and personalities

Tufts was still digging up names from his past-those that influenced him over the years.

"One thing I liked [about Bucknell] from the beginning was the interest in all the sports," Tufts said. "People like Bob Latour really influenced my career and stood up for athletic strength across the board." Latour was Bucknell's first swimming coach, from 1956-68, before serving as Athletic Director from 1968-78. He retired in 1990, at which time Tufts assumed his position as Associate Athletic Director.

Other major influences to Tufts included Athletic Director Al Humphreys (1946-62); Fitz Walling, the Director of Admissions when Tufts arrived at Bucknell; Harold Evans, the golf pro for whom Tufts took over the men's coaching responsibilities; and John Zeller, a former Vice President for Administration and Finance.

"[John] is simply one of Bucknell's greatest people ever. He was so helpful and his loyalty was incredible," Tufts said of Zeller.

Zeller's qualities must have rubbed off on Tufts.

"Brad has been a strong ambassador for Bucknell and our athletic program for 41 years. He is one of the most thorough and competent individuals that I have ever met," said Tommy Thompson, the current men's golf coach. Thompson has known Tufts since his arrival in 1959, Thompson's senior year at Bucknell. Thompson soon returned to become Tufts' colleague.

Head men's basketball coach Pat Flannery also remembers Tufts from his days as a student at Bucknell.

"He was a friend to all students when I arrived in 1976 ... [and] a fierce competitor when I sat on the other side of the Bison bench in the mid 80s," Flannery said.

"Brad, as a colleague, was a highlight for me in the 90s. [He] is a loyal friend to everyone that ever wore Orange and Blue."

In the 1998, Tufts also found himself back in coaching. Twenty-three years removed from coaching the men's golf team—where he compiled a stellar 80-38 dual-match record—Tufts was suddenly presented with the opportunity to coach the newly formed women's team. He jumped at the prospect as he had been one of the primary advocates of starting a women's golf team.

> *"In his 41 years at Bucknell, Brad Tufts has done as much as anyone I know to advance the broad interests and excellence of the University.*
> *—President William D. Adams*

"It was fun getting [the women's team] started and watching it grow," Tufts said. "[The team] is easily the hardest thing to leave behind."

Since 1990, Tufts has served as Associate Athletic Director, and recently made a stint as Interim Athletic Director from this past August through February following Rick Hartzell's resignation. In 1993, Tufts received the Bison Club Award.

"Trivia Wizard"

When Tufts' name is mentioned, one thing quick to the mind is trivia. He is a living, walking database of Bucknell facts, able to retrieve names and dates with ease.

"No one else has the knowledge and understanding of Bucknell's history and tradition in athletics and other things on campus," Tom Gadd, football coach, said.

"Brad knows more about this University than anyone I know—and I'm not just referring to athletic history," Newcomb said.

Head women's soccer coach Chrissy Findlay, however, remembers stumping the trivia king recent-many Bucknell student-athletes earned Dean's List honors for the 1999 fall semester. He knew the answer of course-168. She continued, though, and repeated the question for the 1998 fall semester. Tufts did not know. It was the same number, 168.

"Everyone knows that Brad is a Bucknell trivia wizard," Chrissy Findlay, said. "I am proud to say that I stumped him once ... just once."

Tufts plans to organize all of this data someday by writing a two volume "History of Bucknell Athletics".

Tufts will probably never really be done giving himself to Bucknell. He is preparing for one last hurrah, though. He will deliver the baccalaureate address, entitled "Reflections on Learning and Leaving" at this year's Commencement Weekend.

"I've made a lot of notes and done a lot of thinking," Tufts said of his preparation for the speech.

The future

So what sparked Tufts to give it up now?

"A lot of things, I guess," Tufts said. "I'm getting a little tired at 62, but mostly just felt it was time."

"My wife and I had decided to go south at some point even though we both enjoy [Lewisburg] immensely," Tufts added of leaving Lewisburg. The two plan to move into their newly built house in late August. "We'll be back a few times a year and will look forward to [hosting] Lewisburg visitors."

Reflections on the past

Tufts continues to touch the lives of many—coaches, athletes, administrators—the list goes on. He has lent his support, time and energy, and by no means has it gone unnoticed.

"It is hard to describe in words what Brad has meant to me personally. He has helped guide and direct me as an administrator here at Bucknell," Terrie Grieb, head softball coach, said. "I came to Bucknell right out of college, began coaching and often Brad was the one giving me advice about coaching, recruiting and life in general."

"[Brad] taught me everything I know about this business and my respect for him is unmeasured. He is a great friend and a terrific mentor," Newcomb said.

"He bleeds orange and blue (and sometimes maroon and white). [He is] principled, enthusiatic, [and you] always know where he stands on an issue," Gerald Commerford, associate dean of students, said. "His wife, Betty, is his greatest asset ... his legacy will remain."

Tufts maintains that through the six decades, meeting and marrying his wife is the single best thing to happen to him at Bucknell. "[Betty] and the girls have been great about dealing with a lot of long hours," Tufts said. "Their support at home has made it all possible."

Identifying his worst experience ative process from Tufts. He finally replied, "The toughest part has been the collective loss of too many friends that died too young, before they were able to give all they could."

Tufts' career at Bucknell is very unlike current trends that see individuals changing jobs several times throughout their lives. In his 41 years, did Tufts ever consider leaving?

"For the first 15-20 years, I never even thought about staying this long. However when our girls got to the point where college planning was beginning, I was pretty sure I wouldn't be leaving until they got out of college," Tufts said of Bucknell's tuition benefits for children.

The Tufts' two daughters, Suzanne and Allison, went on to attend Duke and William & Mary, respectively.

Tufts did briefly consider some positions throughout his career, but none materialized. "I considered a PR/development position with a non-collegiate non-profit, an AD position at a smaller school and had an interview at the United States Golf Association," Tufts said.

One of Tufts' only regrets after 41 years are that he will not be here to see the new athletic facilities being built.

"I'm disappointed for some wonderful people who, through the years, came up just short in their bids for championships," Tufts added.

"However, those are small compared to the joy and excitement of watching athletes and teams compete, getting to know so many wonderful people, staying friends with so many people, and just being a part of a very vibrant campus."

"It's been wonderful learning and I hope I can manage leaving."

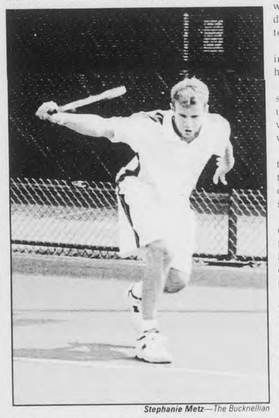
Men's tennis finishes season; looks to Patriots

By Mike Brophy

The Bucknell men's tennis team's very tough season continued last week as they faced up against Lehigh and St. Francis (PA).

Trying to improve their disappointing season record of 6-11, the Bison concentrated on the matches at hand. The first match pinned the team against Patriot League rival Lehigh. Winning two of the three doubles matches, Bucknell was up one point on Lehigh and was in prime position to win the match.



Stephanie Metz—The Bucknellian

The tennis hope to redeem a disappointing season as the enter the Patriot League Tournament on Friday.

But as the singles matches began, the Bison saw the match slip away. In four of the six matches, Bucknell lost the first set.

In the end, the Bison posted two singles wins, with senior T.K. Kelly and sophomore Alex Davydov earing victories. Both of these matches went to three sets.

But Bucknell eventually lost four of the remaining singles matches, which swung the match to Lehigh, 4-3.

The next match proved to be better for the Bison, as they concluded their regular season schedule with a 5-2 victory over St. Francis (PA). This victory did not come as a surprise to the team, as it won all four meetings between the two schools.

In Kelly's final career singles match at home, the Bucknell senior unfortunately dropped a tough three setter (6-3, 0-6, 6-2). The rest of the team competed well, winning four singles matches and sweeping all three doubles matches.

Although Kelly lost his final home match, his career at Bucknell has been phenomenal. He is fourth place on Bucknell's all-time singles victory list with 43 wins. He also contributed greatly in doubles, winning a total of 42 matches, putting him third all-time.

This Friday, Bucknell enters the Patriot League Tournament. Coming in as the number five seed, Bucknell looks to seek revenge over Lehigh in the first round of the tournament. If all goes well with this match, the Bison would face off against host Army.

Coach Bob Hammerlee was optimistic about his team's chances. "We hope to get revenge against Lehigh and then to give Army the best match that we can give them," Hammerlee said.

Football kicks things off with annual Blue-Orange match-up

By Joshua Gish

Linebacker Dane Helsing '03 returned an interception 25 yards for a game winning touchdown to give Blue a 14-7 victory over Orange in the Bison Football Spring Game.

Helsing, who was recently moved to linebacker from quarterback during spring practice, made it obvious that the coaches made the right decision as he stepped in front of Todd Wenrich's '03 pass and sprinted to the corner of the end zone for the game-winning score. "I was just covering my zone and the ball was right there," said Helsing. "I'm new at this position [linebacker], and I hope today was an indication of what I might be able to do there in the future."

Tied only with Mark Tallman '02, Helsing also shined with his team leading six tackles and tallied a tackle for a loss and four unassisted stops.

"Dane has had a big spring for us," said head coach Tom Gadd. "We moved him to a position that we think will allow him to make a big impact for us."

Early on, the Blue team led the contest until Orange quarterback Todd Wenrich '03 fired a bullet through traffic to his tight-end Greg Readinger '02 allowing him to step into the end zone. Following the successful point after attempt by Chris Lundberg '03, the Orange evened the score at 7-7.

Following Helsing's interception return, the Orange team failed to penetrate the Blue's defense again. This defense was held up through the work of Helsing who again showed his prowess as he broke up Orange's final possession of the day and enthusiastically ended a very successful game. Tallman was also credited with strong defensive action maintaining his position in the Orange backfield all game and tallying a tackle for a loss and a quarterback sack.

Similarly acclaimed was junior defensive end Matt Borich who recorded two assisted tackles and teamed up with Pete Christathakis '03 to apply the pressure on Wenrich that forced the defeating interception. Freshman Adam Minggia was also recognized for his play on the Blue team totaling five tackles at the cornerback position.

LaMario Bradwell '01 rushed for 62 yards on nine carries and caught three passes for an additional 57 yards. Jabu Powell '02 opened the game strong with a 78-yard blast to Gerald Funderburg '02 on a halfback pass but was held to just two possessions for 11 yards until he turned his ankle early in the first quarter.

Other notable players were fullback Matt Kawczenski '02 (who ran for 14 yards on three carries), tailback Ricco Rosini '02 (who tallied ten yards on two carries), and quarterback Chad Mehle '02 (who completed three of seven passes for a total of 57 yards).

Sophomore tailback Tony Varano led the opposing team's offense with a game-high 49 rushing yards in 13 attempts. Weinrich connected on 11 of 23 passes for 122 yards and added 29 yards on seven attempts. Readinger lead the receivers with three receptions for 60 yards while defensive back George Cowan '02 added three receptions from 19 yards and Varano three for 17.

The Blue defensive stronghold was upheld by Justin Lustig '00 and Darsean Johnson '02 with four tackles apiece and Joe Massey '03 who added two quarterback sacks and a forced fumble.

Readinger was named the most improved offensive player of the spring and Dane was named most improved defensive player of the spring.

The Bison will open their 2000 season on September 2 when they travel to Virginia for a 7:00 p.m. game with the Richmond Spiders. Bucknell's first home game is on September 16 against Cornell at 1:00 p.m.

BU coach earns honor from peers

By Jim Leahy

Bucknell University men's golf coach Tommy Thompson has been selected as the 2000 Patriot League Men's Golf Coach of the Year in a unanimous vote of his peers. This is Thompson's first coach of the year honor in seventeen seasons.

Thompson led his team to a second-place finish at the Patriot League Golf Championship last weekend. The Bison, who were picked to finish fourth in the preseason coaches' poll, turned in a two-day total of 914 to finish three strokes back of Navy.

On the links, Thompson has guided Bucknell to over 100 dual-match victories. He also coached the 1988 Colonial League champions and 1987 East Coast Conference champions. In his 30-plus years at Bucknell, he has also coached the baseball, tennis and junior varsity basketball teams.

As a head baseball coach from 1967-81, Thompson directed his program to one of the most dramatic turnabouts in Bucknell athletic history, guiding a team that finished 0-15 in 1968 to the Middle Atlantic Conference Championship and a 15-4 record in 1969.

Thompson, a 1960 Bucknell graduate, excelled as both a basketball and baseball player. He captained the basketball team and was a very successful pitcher on the baseball team. He later went on to pitch professionally within the Detroit Tigers organization for three seasons.

In 1986, Thompson was inducted into the Bucknell Athletic Hall of Fame.

Tennis winless in League

By Carmen Mauriello

The Bucknell women's tennis team fell to 4-8 overall and 0-4 in the Patriot League after suffering a 9-0 blanking by league powerhouse Army last Saturday. But this Friday and Saturday, the Bison and their rivals will throw their records out the window and compete in the winner-take-all Patriot League Championships this weekend at Army.

The Bison learned just how stiff the competition at Patriots will be when they traveled to West Point, N.Y. to challenge Army. The Bison didn't take a set in any of the six singles matches or the three doubles contests.

The most competitive match was played by freshman Laura Maisel at number five singles. She fell 4-6, 3-6, dropping her season record to 5-7 overall.

The top singles records for the Bison belong to Kary Wolford '02 at 4-4 and Kristen Inglis '02 at 5-6.

The Bison are optimistic about their chances of pulling an upset at Patriots. "Everyone's anxious to play," Maisel said. "We have a good chance despite our rough start [to the season]. Everyone's confident and looking forward to competing."

The Bison will lose their two senior co-captains, Kerry Callaghan and Tracy Honko, to graduation. Callaghan has compiled a 6-18 singles record in '00 with 11 of her 12 matches coming at the number one position. Honko's record this season is 10-14, with the majority coming at the number four position.

The leadership of the two seniors will be greatly missed by the Bison. Both have led the team through troubled waters in their careers.

"This season, in particular, has been up and down, but we've pulled together to make things positive," Callaghan said. "My best experience has been meeting my teammates. We've grown into a really close-knit unit."

"I have definitely had an incredible experience with tennis at Bucknell," Honko said. "It has added so much to my four years."

"Kerry has been such a great co-captain and friend," Honko added. "She has made all the obstacles we have overcome so much easier."

SOFTBALL from page B1

ed Titus, going 2-2 with an RBI, and Ford and Janowski going 2-4. Stephanie Morgan '01, Kerry Klein '03, Zergebel and Dugan all had one hit in the contest as BU outslugged St. Francis 10-7.

BU's regular season ends with a record of 10-25 in overall play. At the Patriot League Tournament this Friday the Bison are seeded sixth and will play third seed Lafayette at 3:00 p.m. Despite a rocky season, Tan is confident that Bucknell will make a good showing at the tournament.

"We have put the ups and downs of this season behind us and are prepared to be completely committed to the great opportunity we have in the tournament," she said. "Any wins and losses before this weekend are meaningless, but I think we've learned a lot about how to work together as a team."

Although Tan hopes for victory this weekend, she still keeps things in perspective. "No matter what happens this weekend," she said, "this is a great team of girls with a lot of heart and I have truly enjoyed playing with them."

The Blue and Orange lose only two seniors this year, returning 18 women and welcoming new recruits. "This is a young team with a ton of talent," Tan said. "As they grow and mature together, I am confident that they will become one of the most successful teams Bucknell has ever seen."

BASEBALL from page 1

combination of good pitching and errorless baseball."

A major reason for Bucknell's four-game sweep of Lehigh was the effective work of the pitching staff. The staff gave up only three earned runs the entire series and had three complete games and a great relief effort in the fourth game. They reduced the overall team ERA by half a run over the series, taking it from 6.20 to 5.70.

The Bison continued their season on Wednesday in their final regular season home game against neighborhood rival Susquehanna, turning in a dominating offensive performance en route to a 17-6 victory.

In the highlight of the game, Potalivo, who had never had an at-bat in his four-year career at Bucknell, connected on home run over the fence in left center. Outfielder Mike Ritz '01 had a home run as well, and freshman Zachary Allen picked up his first victory of the year. Prout was 3-4 on the day with a triple and two doubles.

The Bison now find themselves at 20-21 on the year and in second place in the Patriot League with a league mark of 10-6, one game behind first-place Navy. After a non-conference matchup against Towson today, the Bison travel to West Point this weekend to face the Cadets in their last four games of regular season.

"If we can win three of these games, we can guarantee ourselves a post-season appearance for the fifth straight year," Depew said. "We need to have another successful weekend."

If the Bison sweep the weekend series and Navy stumbles against Lafayette, there is a possibility that the Bison could gain the top seed and host the Patriot League Tournament for the second consecutive year.

Also, this weekend represents the culmination of the careers of seven seniors who have left an indelible mark on the Bucknell baseball program.

Scott Perry, Ed Soley and Potalivo have 12 of the 19 wins and have pitched over half of the innings for the Bison pitching staff this year.

Prout is leading the team with a .399 average and is on the verge of breaking close six to ten school records. Frescони, currently second on the team in hitting, is not far behind Prout, as he's close to breaking the school and league single-season home run record. Both Prout and Frescони have had good years defensively, with Prout playing a very solid second base and Frescони being a force behind home plate, especially this past weekend when we threw out three baserunners.

Unfortunately, the other senior pitcher, Mark Stetina, suffered a season-ending elbow injury after his second start of the year, in a game where he picked up a key win for the Bison against Lafayette. Rick Ciccione has served as a very effective role player for the Bison this year, playing both middle infield positions and anywhere in the outfield.

"We will definitely miss all of these guys. They will be difficult to replace," Depew said.

"As Depew looks at next year's squad, he sees a very different team, as the Bison are losing three starting pitchers and their 3-4 hitters from the lineup.

"We have an outstanding junior class and there is a possibility that we could have nine seniors on the field next year," Depew said.

The Bison will return all three of their starting outfielders along with two starting infielders and two of their three catchers. Also, the Bison look forward to the return of senior pitcher Kevin McDowell.

"What kind of improvement our younger pitchers make and McProut playing a very solid second base and Frescони being a force behind home plate, especially this past weekend our younger pitchers make and McDowell's return as a healthy contributor will be keys for us next year," Depew said.

Enjoy a helpful and rewarding summer at Camp Sussex which is located in the beautiful mountains of northern New Jersey and is about one hour from New York City.

Celebrating six decades in Bucknell athletics

A tribute to Brad Tufts

By Jared Silliker

Brad Tufts' first day of work at Bucknell was June 29, 1959.

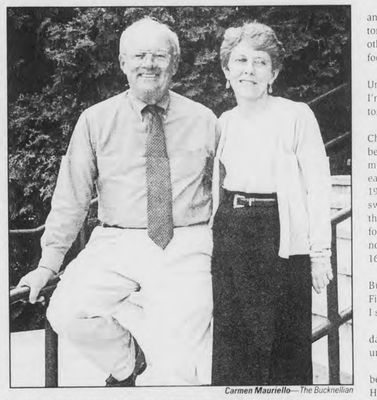
He has not worked elsewhere since.

In that time, he found ways to touch countless people's lives.

Into his sixth decade in Lewisburg, Tufts has finally decided to call it quits after 41 years of service current Associate Athletic Director has served Bucknell in numerous capacities and has become a University icon—a ubiquitous image at University and athletic events. His institutional knowledge and loyalty are second to none.

"Quite simply, I'm not sure another person will walk through the doors of Bucknell University as committed and as dedicated to this University as Brad Tufts," Heather Lewis, head womens' field hockey coach, said.

Tufts plans to retire to Hilton Head, S.C. with his wife, Betty, who will also retire from the University this year. She is currently the Associate Director of Admissions. Their joint retirement comes with 34 years of marriage, after Mrs. Tufts began work in 1964 as the Assistant Dean of Women. The two were married in Rooke Chapel on in June 1966.



Carmen Mauriello—The Bucknellian

Brad Tufts poses with his wife, Betty, outside the Fieldhouse.

Courtesy of Athletic Communication

Tufts (center) looks out with encouragement at a University swim meet.

"Brad and Betty Tufts are what Bucknell is all about," Todd Newcomb, director of athletic communication, said. "When [Brad] leaves us, one of the University's most valuable resources will leave us."

New beginnings

Tufts first stepped foot on campus the day after graduating from Colgate University in 1959, and was soon hired as the Director of Sports Information. He was a go-getter from the very beginning.

He was supposed to start work on July 1, a Wednesday. But he called his first boss at Bucknell, Trennie Eisley, then director of Public Relations, and asked if he could just start on Monday.

"I will forever be grateful to [Trennie] for having the faith to hire me three months out of college," Tufts said. "She was so loyal and taught me a ton about writing, public relations and Bucknell."

In 1964, Tufts changed gears somewhat. In what he called the best thing professionally to happen to him at Bucknell, Tufts became the Assistant Director of Public Relations.

"I never thought of getting out of sports, but thought this would be interesting," Tufts said. With the move, Tufts became even more broadly exposed to aspects of the University. Tufts served as adviser to both The Bucknellian and L'Agenda, and edited Bucknell World (1976-80). He also became the men's golf coach in 1967 and served through 1975.

"The direct contact with kids is what keeps you going," Tufts said of his interaction with student-athletes. "You don't have to always agree with them-that's what we're all here for."

"His loyalty is incredible. I appreciate him being at every single game and traveling with John Hardt to Worcester, MA for the Patriot League Championship game," Kathy Fedorjaka, women's basketball coach, said. "It really meant a lot to the kids to have people there."

In 1980, the University moved Sports Information into the Athletic Department (a trend at many schools across the nation) and brought Tufts with it. He became the Assistant Athletic Director for Public Relations. Of his official move back to sports, Tufts said, "It was just time for a change, to do something different."

"In his 41 years at Bucknell, Brad Tufts has done as much as anyone I know to advance the broad interests and excellence of the University," President William D. Adams said. "It is very hard for many of us to imagine this place without him. He has been an excellent colleague and a good friend."

Influences and personalities

Tufts was still digging up names from his past-those that influenced him over the years.

"One thing I liked [about Bucknell] from the beginning was the interest in all the sports," Tufts said. "People like Bob Latour really influenced my career and stood up for athletic strength across the board." Latour was Bucknell's first swimming coach, from 1956-68, before serving as Athletic Director from 1968-78. He retired in 1990, at which time Tufts assumed his position as Associate Athletic Director.

Other major influences to Tufts included Athletic Director Al Humphreys (1946-62); Fitz Walling, the Director of Admissions when Tufts arrived at Bucknell; Harold Evans, the golf pro for whom Tufts took over the men's coaching responsibilities; and John Zeller, a former Vice President for Administration and Finance.

"[John] is simply one of Bucknell's greatest people ever. He was so helpful and his loyalty was incredible," Tufts said of Zeller.

"Brad has been a strong ambassador for Bucknell and our athletic program for 41 years. He is one of the most thorough and competent individuals that I have ever met," said Tommy Thompson, the current men's golf coach. Thompson has known Tufts since his arrival in 1959, Thompson's senior year at Bucknell. Thompson soon returned to become Tufts' colleague.

> *"In his 41 years at Bucknell, Brad Tufts has done as much as anyone I know to advance the broad interests and excellence of the University.*
> *—President William D. Adams*

Head men's basketball coach Pat Flannery also remembers Tufts from his days as a student at Bucknell.

"He was a friend to all students when I arrived in 1976 ... [and] a fierce competitor when I sat on the other side of the Bison bench in the mid 80s," Flannery said.

"Brad, as a colleague, was a highlight for me in the 90s. [He] is a loyal friend to everyone that ever wore Orange and Blue."

In the 1998, Tufts also found himself back in coaching. Twenty-three years removed from coaching the men's golf team—where he compiled a stellar 80-38 dual-match record—Tufts was suddenly presented with the opportunity to coach the newly formed women's team. He jumped at the prospect as he had been one of the primary advocates of starting a women's golf team.

"It was fun getting [the women's team] started and watching it grow," Tufts said. "[The team] is easily the hardest thing to leave behind."

Since 1990, Tufts has served as Associate Athletic Director, and recently made a stint as Interim Athletic Director from this past August through February following Rick Hartzell's resignation. In 1993, Tufts received the Bison Club Award.

"Trivia Wizard"

When Tufts' name is mentioned, one thing quick to the mind is trivia. He is a living, walking database of Bucknell facts, able to retrieve names and dates with ease.

Courtesy of Brad Tufts

Tufts with the current women's golf team: (front, left) Molly Campbell, Bridget O'Mara; (back) Hilary Mainka, Amy Jones, Jess Hetrich, Catherine Crews, Tufts.

"No one else has the knowledge and understanding of Bucknell's history and tradition in athletics and other things on campus," Tom Gadd, football coach, said.

"Brad knows more about this University than anyone I know—and I'm not just referring to athletic history," Newcomb said.

Head women's soccer coach Chrissy Findlay, however, remembers stumping the trivia king recent-many Bucknell student-athletes earned Dean's List honors for the 1999 fall semester. He knew the answer of course-168. She continued, though, and repeated the question for the 1998 fall semester. Tufts did not know. It was the same number, 168.

"Everyone knows that Brad is a Bucknell trivia wizard," Chrissy Findlay, said. "I am proud to say that I stumped him once ... just once."

Tufts plans to organize all of this data someday by writing a two volume "History of Bucknell Athletics".

Tufts will probably never really be done giving himself to Bucknell. He is preparing for one last hurrah, though. He will deliver the baccalaureate address, entitled "Reflections on Learning and Leaving" at this year's Commencement Weekend.

"I've made a lot of notes and done a lot of thinking," Tufts said of his preparation for the speech.

The future

So what sparked Tufts to give it up now?

"A lot of things, I guess," Tufts said. "I'm getting a little tired at 62, but mostly just felt it was time."

"My wife and I had decided to go south at some point even though we both enjoy [Lewisburg] immensely," Tufts added of leaving Lewisburg. The two plan to move into their newly built house in late August. "We'll be back a few times a year and will look forward to [hosting] Lewisburg visitors."

Reflections on the past

Tufts continues to touch the lives of many—coaches, athletes, administrators—the list goes on. He has lent his support, time and energy, and by no means has it gone unnoticed.

"It is hard to describe in words what Brad has meant to me personally. He has helped guide and direct me as an administrator here at Bucknell," Terrie Grieb, head softball coach, said. "I came to Bucknell right out of college, began coaching and often Brad was the one giving me advice about coaching, recruiting and life in general."

"[Brad] taught me everything I know about this business and my respect for him is unmeasured. He is a great friend and a terrific mentor," Newcomb said.

"He bleeds orange and blue (and sometimes maroon and white). [He is] principled, enthusiatic, [and you] always know where he stands on an issue," Gerald Commerford, associate dean of students, said. "His wife, Betty, is his greatest asset ... his legacy will remain."

Tufts maintains that through the six decades, meeting and marrying his wife is the single best thing to happen to him at Bucknell. "[Betty] and the girls have been great about dealing with a lot of long hours," Tufts said. "Their support at home has made it all possible."

Identifying his worst experience ative process from Tufts. He finally replied, "The toughest part has been the collective loss of too many friends that died too young, before they were able to give all they could."

Tufts' career at Bucknell is very unlike current trends that see individuals changing jobs several times throughout their lives. In his 41 years, did Tufts ever consider leaving?

"For the first 15-20 years, I never even thought about staying this long. However when our girls got to the point where college planning was beginning, I was pretty sure I wouldn't be leaving until they got out of college," Tufts said of Bucknell's tuition benefits for children.

Courtesy of Brad Tufts

Dan Rather and Tufts following Rather's speaking engagement at Bucknell in 1979.

The Tufts' two daughters, Suzanne and Allison, went on to attend Duke and William & Mary, respectively.

Tufts did briefly consider some positions throughout his career, but none materialized. "I considered a PR/development position with a non-collegiate non-profit, an AD position at a smaller school and had an interview at the United States Golf Association," Tufts said.

One of Tufts' only regrets after 41 years are that he will not be here to see the new athletic facilities being built.

"I'm disappointed for some wonderful people who, through the years, came up just short in their bids for championships," Tufts added.

"However, those are small compared to the joy and excitement of watching athletes and teams compete, getting to know so many wonderful people, staying friends with so many people, and just being a part of a very vibrant campus."

"It's been wonderful learning and I hope I can manage leaving."

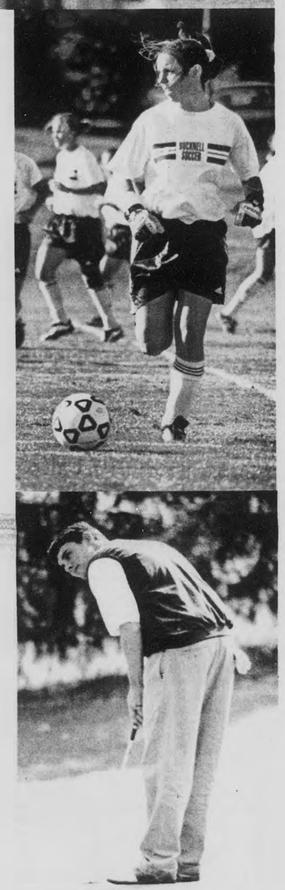
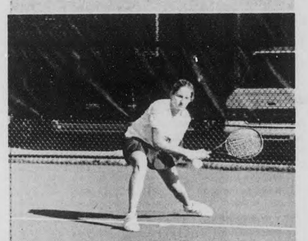
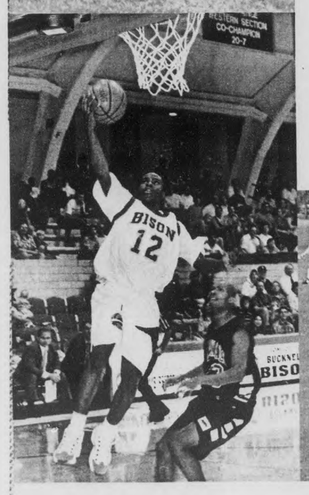
IN REVIEW







Sports figures of the year

Men's Athlete of the Year: Shawn Redd

By Carmen Mauriello

Shawn Redd '01 is one of the most physically imposing individuals on this campus. Many people would be frightened to even approach him, and how do you think opposing football players feel about getting hit by Bucknell's 220-pound linebacker?

Opponents fell 104 times at the hands of Redd this season, a performance that earned him All-Patriot League, team MVP and *The Bucknellian's* Male Athlete of the Year Honors.

The most intriguing thing about Redd is that, though a fierce competitor on the field, his coaches and teammates can't say enough about how relaxed, upbeat and enjoyable he is off the field.

Redd's "infectious smile" eased his transition from his transfer from Boston University to Bucknell just over two years ago, and his unparalleled work ethic enabled him to quickly become a leader on the Bison squad and an integral and well-respected part of the Bucknell football community.

After a stellar career at Immaculate Conception High School in Montclair, NJ, Redd decided to continue his academic and athletic careers at Boston University in 1996. Redd worked himself into the starting strong safety position by his sophomore year, but midway through the season, he and his teammates were informed that the school would be discontinuing the football program at the end of the year.

Redd was faced with the tough choice of whether to stay at Boston and focus on academics, or to pack up and continue his football career at another university.

"If I was going to play football again," Redd said, "I was going to make sure that I went to a school that was comparable in athletics and academics to Boston. Bucknell was the right choice."

Redd enrolled in Bucknell in January of 1998, and spent a lot of time getting to know the teammates that would later become his Bucknell "family," getting comfortable in his unfamiliar, rural surroundings and adjusting to a new position, inside linebacker—where he was expected to contribute immediately.

And contribute he did, even beyond his coaches' or his own expectations. Redd finished the year with a team-high six sacks, along with 82 tackles, which earned him All-Patriot League First-Team honors.

His biggest performance came in Bucknell's most important contest of the season, against Patriot League frontrunner, Colgate. The Bison fell 38-21, but Redd established himself around the league with a four-sack performance of Colgate quarterback Ryan Vena, the 1999 Patriot League MVP.

"Colgate was the first big game since I got here," explained Redd. "And I felt I had to let it all hang out."

Redd immediately went to work after the '98 season, focusing on weight training and especially conditioning.

"Weightlifting has always been important to me," Redd noted, "but I hate running. I knew that you need to be conditioned to last into the fourth quarter. I didn't want to come off the field [senior year]."

His coaches immediately recognized Redd's leadership in the team's off-season workouts, while his teammates developed a respect for what he stood for.

"One measure of an athlete is how hard he or she works in the off-season," Gadd said. "And Shawn made a tremendous investment in this team. He brought our work ethic to another level."

"Shawn became a leader in practice, on the practice field and in the locker room," Justin Lustig '01 said. "He was our emotional leader."

Shawn set his sights high heading into his senior year, focusing on his ultimate goal. "I've always had a dream of playing professionally," Redd stated. "So the things I wanted to do this year were to increase my tackles, have an All-American season and overachieve."

The months of training paid off, as Redd had a monster year, leading the Bison in tackles with 104 and recording two interceptions and five sacks. He was undoubtedly the heart and soul of a defense that ranked third in overall defense in the Patriot League and was tied for first in turnover ratio.

"His intensity carried over to a lot of players on the team," cornerback Eric Slaughter '01 said. "Even if he didn't say anything, you get motivated by just watching the way he plays."

Redd was at his best against Bucknell's toughest competitors. He was instrumental in Bucknell's 21-16 upset of nationally-ranked Colgate in the second week of the season.

In what was possibly the biggest play of the season for the Bison, Redd sacked Vena for a safety, which gave the Bison the ball back with a 21-3 lead in the latter stages of the contest.

In Bucknell's 23-16 triumph over Penn, Redd showed his versatility, successfully keeping two drives alive with a pair of fake punt runs that totaled 45 yards. Redd almost single-handedly gave the Bison a chance to defeat national powerhouse Lehigh, twice giving the Bison a lead with a forced fumble in the first quarter and a interception in the third that set up easy BU scores. But the Mountain Hawks proved too much, as Lehigh prevailed 48-27.

The Bison finished 7-4 overall for their fifth straight winning season, and much of that can be attributed to the dedication and desire of Redd. Recognized for his accomplishments, he was given the prestigious title of team MVP and was All-Patriot League First Team.

"[Being named Team MVP] was a big honor," Redd stated. "A lot of legends have been named MVP, and I'm just glad to continue the legend."

Being voted MVP epitomizes how much respect Redd has earned from his coaches and teammates in just two years.

"Before many games it was not Coach Gadd giving the speech but Shawn, motivating the team for the task ahead of us," wide receiver George Cowan '02 said. "His love for the game was evident through his hard work—day in and day out."

Shawn's leadership and intensity will be hard to replace, but maybe hardest will be his upbeat and encouraging attitude. "The thing I'll always remember most about Shawn is his positive attitude towards life," Gadd said. "Toward workouts, practice and everything he did, Shawn had a real quality about being positive about everything."

Redd still needs to take some classes next fall before graduating at the conclusion of the fall semester. Although he no longer is eligible to play collegiate football, Redd plans to stay actively involved with the Bison as a student-coach next fall.

After graduating with a major in management, Redd would like to use his "people skills" to land a job in marketing or advertising. But in the immediate future, he still has his sights set on his childhood dream—playing professionally.

The Tennessee Titans sent a scout to Lewisburg a few weeks ago, with "very positive" results. Redd was told that he could be invited to an NFL rookie camp this summer, but he's keeping other options, like the Canadian Football League, open.

One thing's for sure—when Redd gets a chance, he makes the most of it.

Shawn Redd '01: linebacker

Women's Athlete: Lori Houck

By Brian Watson

When women's basketball head coach Kathy Fedorjaka arrived at the University three years ago, she was faced with an uphill battle. A mediocre team competing against strong competition, Fedorjaka drew on a young talent to help her in the rebuilding process.

She called on Lori Houck '00, and three years later, the team is back among the top squads in the Patriot League.

"It was incredible to inherit such a talented player with such enormous potential," Fedorjaka said. "It was a coach's dream."

The tight bond between Houck and Fedorjaka has helped establish Bucknell as a perennial challenger in the Patriot League, and the respect they share for each other is unmistakable.

"She has such a fire, such a passion about here," Fedorjaka said of her star senior. "Her energy and enthusiasm is contagious."

Houck credits Fedorjaka's unique coaching style with helping advance and improve her skills as well as the team's outlook. "She works us hard out of season and in season," Houck said. "She recruits players based on her style. The talent and athleticism she looks for brings in the best players possible."

Houck, who came to Bucknell after a successful high career in Quarryville, Pa., stepped in and became an instant impact player.

"I didn't feel any pressure during my first year," Houck said. "There were so many times when I thought to myself, 'This seems too easy. We should be working harder.'"

Houck's progression from standout freshmen to team leader was immediate. "More of Lori's growth was in her confidence level and leadership," Fedorjaka said. "She always had the athletic ability, there was no question about that."

And she has lived up to every expectation put on her. Houck has started all four years and captained the women's team for her final two seasons.

Courtesy of Athletics Communications

Lori Houck...

With a talented crop of recruits over the past few years, Houck foresees continued improvement for the Bison.

"It feels good to see we're building a comparable team," Houck said, "I definitely expect big things from them."

But the team can thank Houck for her leadership and inspiration, resulting in the team's rapid rise in the Patriot League. With young standouts like Vicky Quimby '02, Molly Creamer '03 and Katie Franks '03, the Bison will look to recapture the Patriot League title.

But Houck's presence will not be forgotten.

"They all look up to her. The younger players spoke highly about how much they learned from her," Fedorjaka said, "She got the confidence that it was her team, Lori wouldn't yell, but she knew how to demand and direct."

Fedorjaka said that, even in with the emergence of such skilled underclassmen, Houck didn't back down, and, if anything, urged the freshmen to keep progressing. "Lori is so humble," Fedorjaka said. "Even with all the younger players stepping up, Lori never missed a beat."

Looking back on her career at Bucknell, Houck recalled the team's intense matchups against arch rival Holy Cross. "I loved playing against them," Houck said. "They wanted to play and win. They respected you if you did well."

Houck's fondest memories include the Bison's home victory over the Crusaders during her sophomore year, and the team's playoff performance this past season in which they reached the finals, only to be downed by Holy Cross.

The women's captain will graduate with a degree in accounting and will work in the finance department of General Electric next year.

But even with Houck's departure, the women's team is prepared for competitive seasons in the next few years. But Fedorjaka constantly recognizes Houck's efforts in helping to rebuild the program.

"It's so great to have an athlete with such a positive influence," Fedorjaka said. "If we didn't have a Lori Houck, there's no way we would be able to teach [the younger players] what we did."

Women's coach: Kathy Fedorjaka

By Andrew Bevan

"Her heart is big and her love for her players equals her love of the game." These words from senior tri-captain Jen Winhofer could not have more adequately summed up better head women's basketball head coach Kathy Fedorjaka, *The Bucknellian's* Coach of the Year.

"I run my team as a family. In order to build a program and tradition you have to build a family," Fedorjaka said.

In only three years, Fedorjaka has certainly done that, leading the women's team to the championship game of the Patriot League tournament for the first time in school history this year.

Being successful from the beginning is not something new to Fedorjaka. A star player at Fairfield University, she led her team to the NCAA tournament in 1988. She was named to the Metro Atlantic Athletic Conference All-Academic Team and received the conference's medal of merit award.

Fedorjaka made her first stop in Lewisburg as a graduate assistant for the women's team while pursuing her master's degree in education. She stayed on as a full-time assistant after receiving her degree in 1992. Fedorjaka left a year later to accept her first full time head coaching position at Connecticut College.

"It was a great situation for me to walk into as a graduate assistant [at Bucknell]. I had a great experience in my first three years here," Fedorjaka said. "I wasn't looking to leave, but the opportunity presented itself."

Paige Cull—The Bucknellian

Women's hoops coach....

After leading Connecticut College to a 16-8 record in her first year, Fedorjaka was hired by nearby Bloomsburg University. In her third year at the helm, she led her squad to a second-place finish in the PSAC conference and the school's first NCAA Division II tournament appearance in five years.

Once again Fedorjaka was not looking to move but was presented another opportunity.

"I was very happy at Bloomsburg. I felt lucky to be at a respected Division II program," Fedorjaka said. "But I think you have to take opportunities when they come."

Bucknell certainly is glad she did take the opportunity when former Bucknell athletic director Rick Hartzell came calling three years ago.

In her first year at Bucknell, Fedorjaka led the Bison to a 12-14 overall record and was named Patriot League Coach of the Year, becoming only the second active league coach to achieve such an accomplishment. Last year she led the Orange and Blue to a regular season second-place finish in the conference.

This year was certainly a roller coaster ride for the Bison, full of many ups and downs. The team started the season well, jumping out to the school's best start in 10 years at 3-0.

However, the young season almost took a turn for the worst in the span of one day in late November. Two members of the squad were in a car accident returning to campus from Thanksgiving break, and some players decided to leave the team that same day. Fedorjaka found herself with only nine players suiting up for practice.

"It was a hard, emotional day for everyone," Fedorjaka said. "I went home that night and at practice the next day I sat there watching the team and I told myself that we were going to be fine. That day ended up being our driving force."

"The greatest thing about coaching this team was their loyalty, commitment and dedication," Fedorjaka said. "People gave up starting roles. It was a very unselfish team. Our lower numbers were our biggest strength. The tightness and unity was the strongest of any team I have ever coached."

After splitting a pair of games in the Cornell Classic, the Bison endured some tough times in the month of December, dropping seven out of eight games in December before beginning league play.

Bucknell got back on track as soon as conference play began, initiating a seven-game winning streak and sweeping the first round of Patriot League play, a first for the program.

But the Orange and Blue hit a skid again at the end of the season, losing their last four regular season games.

The Bison turned things around at the right time in the Patriot League Tournament, advancing to the semi-finals for the first time and then on to the championship game before falling to rival Holy Cross.

"I was so proud of what they did in the tournament after the losing streak we went through," Fedorjaka said. "I have to point to our seniors. Their leadership was critical. So many things came together in the tourney. I felt so much pride seeing the maturity that our players had gained in the athletic sense."

Two of the things that Fedorjaka was most proud of this year were that her team finished in second in the Patriot League for the second consecutive year and that they did so well in the tournament.

"You have to establish tournament success. The freshman and the sophomores now know how to be in first place in the league week in and week out and do well in the tournament," Fedorjaka said.

As far as her coaching philosophy, Fedorjaka points to something she learned from her playing days. "My college coach always stressed to surround yourself with good people and good thing will happen," Fedorjaka said.

Fedorjaka deflects much of the praise to her coaching staff, which include assistants Liz Cranmer and Jim Reed along with Christie Berry, a former player of Fedorjaka's at Bloomsburg. She saluted their extensive knowledge of the system and loyalty to the team.

Also, Fedorjaka believes that to be successful you have to be able to recruit. "You have to find not only talented players, but players with the right attitude who will buy into the program," Fedorjaka said. "I want people who will be the best they can be. I am going to push you but I will be your biggest fan."

Her players agree. "Coach has always been behind us every step of the way, through the good and the bad times," Monique LeBlanc '02 said. "Her goals for us and expectations are always so high because she demands excellence. She won't settle for anything but the best that we are capable of."

Fedorjaka emphasized that the two reasons she went into coaching are her passion for young people and her passion for the game of basketball. "The opportunity to win with great people is the best part. At Bucknell, you can couple success with great people," Fedorjaka said. "My players are great people to coach. I love them to death."

"Coach Fedorjaka is so passionate about basketball and her love of the game comes out so strongly in her coaching," Molly Creamer '03 said. "She cares about every one on the team as players and as people, and she pushes us all to do our best."

"Coach Fed has always been there for me on and off the court. Without her love and guidance, I would not be the player or person I am today," Rebekah May '02 said.

As Fedorjaka looks towards next season she is very excited about her team's prospects.

"We are going to be young with no seniors on the team. We are bringing in six to seven freshman and some of them will have to play critical roles," Fedorjaka said. "I am expecting big things. We have enough talent across the board."

Goals for next year's squad include improving the team's out of conference record and playing for a number one seed in the Patriot League tournament.

"To be in the upper echelon of the league year after year is our biggest future goal," Fedorjaka said. "We have taken a lot of steps in the past three years."

And with a proven leader like Fedorjaka at the helm, these goals seem very attainable.

Women's Rookie: Sonja Wettergreen

Brooke Rea

Not many freshmen can step into a Division I program with as much ease and success as field hockey goalie Sonja Wettergreen, who helped lead the Bison to the Patriot League Playoffs in the fall. By far the best rookie in the Patriot League, Wettergreen is also ranked eighth in the nation in save percentage.

"Sonja was in a difficult position when she came in," said coach Heather Lewis. "But she had a lot of poise, competed well, and added immensely to our program. She is a key factor in us being as successful as we were."

Wettergreen admits that she wasn't sure at first what her place on the team would be. "I knew there was another goalie already who was a sophomore," she said. "But I just really wanted to play."

Paige Cull—The Bucknellian

Sonja Wettergreen: field hockey goalie

Despite competition for the position, Wettergreen and fellow goalie Melissa Rhoads '02 have a close relationship. "We have two very good goal keepers," Lewis said. "And their daily competition brought out the best in Sonja. Her success was dependent upon Mel giving her some guidance and direction."

Wettergreen started playing field hockey her freshman year of high school, and also competed in tennis and softball. By the end of her junior year, she had decided that she wanted to play in college, and was recruited by Yale, Tufts and Bucknell, among others.

"When I came here and met the girls, I thought they were awesome," she said. "I really fell in love with the team right away and couldn't see myself going to any other school."

Wettergreen proved to be an asset right away, when she and Rhoads had to fill the shoes of a recently graduated goalie. They split time this season, with Wettergreen starting a majority of the games. "I really had to step it up," Wettergreen said. "And I eventually got comfortable with my defense and my position."

"From the first day, Sonja demonstrated a confidence and determination needed by Division I athletes," said senior co-captain Jenny Zimmerman. "She came in ready to play and ready to win games, and every day she fine-tuned her skills with the help of our team and coaches until she had brought herself to the next level."

Co-captain Kate Twombly '00 echoes Zimmerman's sentiments. "I always had complete faith with her in the goal behind us and always assumed she would stop every shot, which she did," she said. "Her accomplishments as a freshman are outstanding."

Wettergreen likes field hockey because it is a team sport and, depending on whether played on turf or grass, can be a very fast game. She is looking forward to next season and hopes to step into the same role she occupied this year.

"What is great about Sonja is that she has three more years to become even better," Zimmerman said. "With the progress she has made so far, it is amazing to think how far she can and will come."

Wettergreen is considering a major in either Management or Economics, or possibly both. She is from Connecticut and hopes to play some pick-up games this summer around her home. If possible she will play in a summer league.

Clearly, Wettergreen's career at Bucknell has only just begun. "By the time she is a senior," Twombly said, "I can honestly say that she will be by far the best keeper in our conference and one of the top in the nation as she continues to improve."

Men's Rookies: Todd Jacobs

By Allison Kuhn

When Todd Jacobs '03 met Coach Hammerlee at the Ed Krass College Academy at the University of New Hampshire during the summer of 1998, a beautiful friendship was born.

Coach Hammerlee and Jacobs hit it off right away, and Hammerlee vividly remembers the camp. "Todd was named Warrior of the Week, the highest award given at the camp," Hammerlee said. "I knew back then that Todd was a quality player." Todd went to the camp knowing that Hammerlee would be there and with an interest in playing for Bucknell. "I knew that I was interested in Bucknell when I went to the camp, so I worked extra hard to impress the coaches," Jacobs said.

Jacobs is from Wayne, Pa., where he attended Conestoga High School. In high school, he was the star of the tennis team. He was on the varsity team all four years and was named First Team All-State his sophomore, junior and senior years.

Paige Cull—The Bucknellian

Todd Jacobs: men's tennis player

During his sophomore and junior years, Jacobs finished third and fourth, respectively, in the State Championship for doubles, along with fellow future Bucknellian, Scott Allen '02. When it came time to decide which college to continue his academic and athletic careers, Jacobs had his choices narrowed down to Bucknell and University of Richmond.

"I knew I wanted to play tennis in college and it was a hard decision but I liked the people at Bucknell much better and it's much closer to home for me," Jacobs said.

The support of the team and Hammerlee made it easy for Jacobs to make the transition from high school tennis to college tennis. "The team was extremely supportive to me especially as the only freshman, and I felt like one of them from day one," Jacobs said.

Coming into his freshman season, Jacobs expected that he would only play doubles, but he found that his success led him to singles play as well.

Todd found the competition at the college level was tougher than in high school, but he rose to the occasion, finishing with the second best record on the team. "Todd is the greatest freshman that I have recruited in a long time," Hammerlee said.

Jacobs has even exceeded the high expectations of Hammerlee, and his performance has improved throughout the season.

"Todd is already playing like a sophomore or junior, he is the most mature freshman that I have ever coached. I am so excited to watch him grow and improve even further in the next three years," Hammerlee said.

Along with being exceptionally talented athletically, Todd has a presence about him when he walks on to the court. He has a winning attitude that is practically unbreakable.

"Todd walks onto the court with the attitude that if you're going to beat me you're going to have to work for it. He never gives up on a point, he plays every point like it is match point, there are very few players that possess this quality," Hammerlee said.

Jacobs's teammates value him just as much. "Todd is the kind of player that you can depend on to give 100 percent at all times. He plays through his off days and you know that he is not going to give up," captain T.K. Kelly '00 said.

Off the tennis courts, Jacobs is pursuing a major in either Economics or Management. He manages to find time to lift weights on his own, which is not a requirement for the tennis team.

Todd takes his schoolwork very seriously and, combined with his dedication to tennis, he finds little time for anything else. "It is hard to be a good student at Bucknell. While being successful athlete, Todd's winning grades please me more than anything else," Hammerlee said.

Todd's goals for the future include constant improvement. Todd is looking to keep moving up on the team; he started out the season at #6 and moved up to #5 half-way through.

"I want to succeed individually as well as with the team overall. I am looking forward to having a winning record next season, and I will do all that I can to contribute to that," Jacobs said.

The way things are going it looks as though Todd will play a big part in the tennis team's future successes over the next three years.

Men's Rookies: Brian Werner

By Craig Kimball

As soon as freshman Brian Werner was done unpacking his clothes last August, he went to Davis Gym and his first basketball season at Bucknell began. Throughout the fall, Brian and the rest of the men's varsity team shot around, got to know each other and conditioned.

"I've never really liked conditioning," Werner said, "and the vigorous workout we had to do involved not only running, but lifting weights." By the time the first game rolled around, Werner had months of practice behind him and was anxious to contribute in any way possible to the success of the Bison. Little did he know how integral he would become to the Bison as the season progressed.

Werner, a 6'7" power forward, fit in perfectly as sixth man to head coach Pat Flannery's strong yet agile basketball team. If either center Dan Bowen '00 or power forward Dyrika Cameron '00 were plagued with foul trouble, Werner was there to fill the void.

Because of his extreme versatility and stellar freshman campaign, Werner has been chosen as *The Bucknellian's* Male Co-Rookie of the Year. Although he contributed a respectable 3.5 points per game and 2.4 rebounds per game, Werner also added some flare, finesse and a physical presence to the team.

Werner recalled his favorite moment from his freshman year: "The game against Iona when I finally began to play to my full capabilities. I was not afraid to shoot and after my first few shots I felt like I couldn't miss."

Being his usual modest self, Werner neglected to mention he had 15 points, two steals, and five rebounds in the course of that game. He also attributed some of his success to Bowen for teaching him not to get pushed around inside the paint and how to utilize his quickness to get around stronger power forwards.

When asked about his decision to come to Bucknell despite being recruited to many other prestigious programs, he replied, "I liked the atmosphere on campus regarding academics and I got along with the basketball players I met which did not happen at all of the schools I visited."

Werner is not only a gifted athlete, but more importantly, an accomplished student-last fall, he earned a 3.5 GPA, which he knows will take him farther in life then his basketball abilities.

Bucknell will graduate four senior starters this year, which will leave Long Islanders Bryan Bailey '02 and Werner plenty of slack to pick up. Both Werner and Bailey know that there role will change to compensate the losses of seniors Bowen, Valter Karavanic, Dyrika Cameron and Brian Muckle.

This year the sun has shined on Werner as he proved himself physically and academically. The Bucknell Class of 2003, as well as the athletic program, is fortunate to have a tremendous athlete, scholar and especially person such as Brian Werner in its ranks.

Men's/Women's coach: Art Gulden

Carmen Mauriello—The Bucknellian

Art Gulden: men's and women's track coach.

By Justin White

Most Bucknellians take for granted that their men's and women's cross country and track teams will rank among the top of the Patriot League every year. And amazingly, their coach, Art Gulden, never seems to disappoint.

He took his XC teams even beyond these lofty expectations this year, as both squads won the Patriot League Championship in impressive fashion, with the women's team advancing to the NCAA Championships for the first time in school history. However, their dream season did not end there, as the women finished an outstanding 24th in the country, beating such athletic powerhouses as Duke, UCLA and Arizona.

And that's just the start of it for Gulden, who also led the women's indoor team to a second straight Patriot League title and the men's team to a second place finish. In case you aren't yet convinced that Gulden's teams have done enough for Bucknell's President's Cup aspirations, his outdoor men's and women's teams are sprinting past the competition this spring. So how exactly does Gulden do this, year in and year out?

When asked to explain what attribute lead their coach's success, his athletes used words like dedication, determination, support and sincerity. But all of these athletes were quick to agree that Gulden puts as much into his work as he expects to get out of his athletes.

XC Captain Carly Graytock '00 aptly termed Gulden's approach as "tough love." He genuinely cares for his athletes but, at the same time, settles for nothing less than the best from each team member.

In a matter of one conversation with Gulden, he repeated nearly a dozen times that, "academics come first and athletics second." This philosophy has proved extremely successful. Gulden's teams have produced an unmatched number of Academic All-Americans and Patriot League Scholar Athletes among league schools.

Gulden prides himself on his ability to help and advise his athletes not just on the track, but also on anything from personal problems to deciding on a major. Part of this ability stems from Gulden's unique teaching background. He taught a seminar for 15 years here at Bucknell and continues to serve as an academic advisor. This allows him to be more aware of what is expected of students and to stay updated with campus issues.

Gulden was first introduced to track and field as a high school athlete in 1956. In college, he was fortunate enough to compete for a very successful Rutgers team under his mentor, coach Wallach, who acted as both a role model and father figure.

After serving a stint in the Vietnam War, Gulden came back to an assistant coaching job under Wallach, which he held for three years before leaving for Bucknell.

According to Gulden, his passion for coaching stems from Wallach's profound influence. "He had this ability to inspire his athletes," Gulden said. "I thought maybe some day I could do that for other people."

Gulden has impacted upon the lives of more than a generation of athletes over the 30 years that he has been a head coach at Bucknell. Coaching six different teams for such a long period of time, it seems nearly impossible to disperse enough time and energy to everyone.

Track Captain Kim McGrath '00 pointed out that Gulden continuously defies these odds. "He coaches over 100 athletes every year but still finds time to know each one," she said. "You can't find that at programs at a lot of other schools."

Gulden's genuine concern for his athletes is complemented by an ability to understand each athlete's individual potential and, furthermore, to motivate each athlete to reach that potential.

> *Bucknell has won six out of the nine President's Cups. These can be attributed to the consistency of Coach Gulden and his programs."*
> *—Todd Newcomb*

"He continually pushes people toward their potential," McGrath said. "But he knows people's limits and knows when to back off."

The success of the program has a lot to do with Gulden's recruiting prowess.

"Part of the recruiting process is scaring kids away—which is fine," Gulden said. "This way the kids know what they're getting into ahead of time and those that come here know they're going to do it our way." For Gulden, "our way" is embodied by his motto of "dedication, sacrifice and hard work."

Due to the limitations of Bucknell as a small, non-scholarship school, he does not always get the most highly-touted recruits. However, those he does get normally reach their full potential through his demanding training regimen. It is for the fact that Gulden gets the most out of his athletes that he is highly respected by many coaches throughout the nation.

The success of the women's cross country team this year brought Gulden's accomplishments as a coach to a new level.

Captain Jen Hart '00 explained that Gulden stresses the importance of a team concept. "In races, he taught us to run as a pack and that the team performance is above individual performances," she said. "By doing this, he brings the team closer together."

In his modest manner, Gulden is quick to deflect all the credit of his team's successes from himself to his athletes. Yet, his XC coaching peers apparently disagreed, voting him this past season's Patriot League Coach of the Year for both the men's and women's cross country teams.

This marked the fourth occasion that Gulden won the award for the men's team and the third time that he received the honor for the women's squad. In addition, he was honored as Coach-of-the-Year in the Mid-Atlantic Region.

The success of Gulden's six varsity teams has strengthened Bucknell's athletic program.

"What he has accomplished is unparalleled in Bucknell history," Todd Newcomb, Bucknell's Assistant Athletic Director and Director of Athletics Communications, said. "Bucknell has won six out of the nine President's Cups. These can be attributed to the consistency of Coach Gulden and his programs."

Gulden's 1999-2000 teams have the opportunity to finish with five league championships, should the men's and women's outdoor track teams each capture the Patriot League title—which is very conceivable for these experienced squads.

Five league titles. That could make a coach's career. But for Gulden, it's just another year.

He has a certain "just taking care of business" mentality that he always projects, allowing him to stay levelheaded when most other coaches in the same situation would be floating on air.

Gulden does not see his teams changing much in future years. His season-to-season goal of winning the conference will remain his focus in competition. Off the track, he will continue to try to positively influence his athlete's lives.

And fortunately for Bucknell, Gulden couldn't think of any other place than Lewisburg to continue and ultimately finish his illustrious coaching career.

In the spirit of the game: ultimate frisbee

Carmen Mauriello—The Bucknellian

Justin White '02 lays out to block a throw of Matt Ferenc '02.

By Adam Feldman

Two weekends ago, the Bucknell's men's ultimate frisbee team, the MudSharks, traveled to Haverford College for a weekend tournament and saw a change that disappointed them greatly. The post-game cheer, an ultimate tradition for all 25 years of its existence, is slowly fading out of the game. The MudSharks were one of two teams out of 25 that gave a cheer for each and every game that they played. Though the 'Sharks were not very successful on the field, their spirit of the game remained extraordinarily high.

Ultimate follows these guidelines for the Spirit of the Game. It relies on a spirit of sportsmanship, which places the responsibility for fair play in the individual. Highly competitive play is encouraged, but never at the expense of the bond of mutual respect between players and, never with an intention to abuse the agreed upon rules of the game, or destroy the pure joy of play.

Actions that go against these basic principles may hasten the day when players no longer control the game. Playing by the Spirit of the Game will help Ultimate remain a sport where each one of us is free to decide, for them, what fair play means to him or her. No set of rules can replace players' respect for one another and the Spirit of the Game, as stated in the Ultimate Player's Association (UPA) guidelines.

These guidelines (which all teams still follow) will always allow frisbee to thrive. Unfortunately, the cheer has always been an unwritten guideline, and therefore is slowly fading out of the game.

The game is changing.

Ultimate Frisbee, a sport that receives little to no recognition, is making a push to earn more positive publicity. Critics claim that the game is not spectator friendly. Recognizing this the UPA has made a push to change the game to earn more positive publicity.

New rules have been added to speed up the breaks between turnovers and points. Unfortunately, the breaks between games have also been shortened, leaving less time to cheer. Also, as the game becomes more popular it has started attracting better athletes, who have risen the level of play. More time is spent discussing strategy, leaving less time for cheers.

The game is changing.

The top college ultimate teams no longer see ultimate as a club sport, but treat it more like a varsity sport. Teams annually receive new uniforms, are sponsored by major corporations, and even fly across the country to find the competition they desire. Schools, such as Carleton College (consistently in the top five of the country), thrive on ultimate. Almost 85% of the students on campus play, and their varsity basketball players also play on the ultimate team.

The game is changing.

The MudSharks will travel to Lehigh University this weekend to play in one of the most intense tournaments of the year, Sectionals. The best teams in Pennsylvania will meet to decide which teams qualify to play at Regionals.

The 'Sharks, focused on spirit, (not recruiting the varsity basketball team) and still look forward to success during the upcoming weekend. Though the 'Sharks don't have the raw talent (mainly due to injuries), their spirit and love of the game should carry them to a birth at Regionals.

Even though the games will be extremely intense, the 'Sharks will leave the field with smiles, win or lose. The 'Sharks are well known for their spirit and will always remain highly spirited no matter how the game changes.

Matt Fisher: 'Sharks senior leader

By John Martin

What do rewording of classic rock songs, Yoda and the importance of winning a party have to do with the influence of one man on a team? Spirit and dedication—that's what.

Matt "Fish" Fisher '00 has come into this season as the co-captain of a very young Mudsharks ultimate frisbee team. He joins Mike "Droopy" O'Brien and Mike Diamond as the only seniors this spring, leaving the team loaded with inexperienced freshmen and sophomores. No matter the adversary, however, Fish has molded this young team into a serious contender to make Regionals this year.

The one major attribute which Fish has always stressed to the younger players is the spirit of the game. One of the fondest memories of Fish's frisbee career has been the way he remembers how "playing with spirit always came first."

After every game, the 'Sharks would be sure to cheer the other team (a long time tradition of ultimate frisbee, see article on left), and could always be found playing with numerous random toys, with their figurine of Yoda poached on a disc overlooking from the sideline.

It is this sense of tradition and pride for the game which Fish has so keenly striven to instill in the minds of the 'Sharks.

No matter the weather, exhaustion of the team or outcome of the game, Fish always leaves the field with pride and chimes in with wild ideas for cheers.

Whether it may be a clever reformation of classic Beatles or crazy renditions of Eiffel 65's Blue, Fish makes sure that the Sharks remain among the elite in keeping the spirit of the game in tact.

Fish's dedication has paid off, as the younger members look up to him as a leader.

"His dedication and team spirit are things we can all look up to and admire," Brian Lowe '03 said. "Fish has been a great team leader both on and off the field. He is a role model for all of us."

And it is not only this spirit which Fish has brought to this year's 'Sharks team, but it is his experience as well.

When Fish was a freshman, the 'Sharks struggled greatly, but the team improved quickly. During his junior year, the team reached a ranking as high as 13 in the nation.

But unfortunately the 'Sharks graduated 12 seniors last year, forcing the team to find young talent to complete the mold with its few returning veterans.

This task was made even more difficult early this spring with injuries to both co-captain Adam Feldman '01 and Tim Scheu '01, really forcing Fish to take charge of the team.

And take charge he has. The team heads into Sectionals this weekend with the real possibility to put on the glass slippers and fight their way to Regionals.

Fish would like to thank Feldman for his large role as motivator and all his coaching from the sidelines, and the contagious enthusiasm which he and Droopy have shown throughout the season. Without these two, the team would not have been nearly as successful as it was.

"Teaching the first-year players how to play has felt very rewarding, and will get more rewarding as they become a Regional powerhouse in the future," Fisher said.

"These Mudsharks have enormous potential for the next few years, and I'll leave with some advice for them: practice every day you can, take advantage of being on this team. Work to improve your game, but never make ultimate practice less fun for anybody, because that's why we're here-to have fun. As you get older, encourage the young players. Always cheer your opponent, always try to win the party and above all else, always play by the spirit of the game."

All the members of the Mudsharks would like to extend their extreme gratitude to Fish, and may the force be with you.

Carmen Mauriello—The Bucknellian

Matt Fisher '00: Four-year Mudshark.

Equestrian team rides into Nationals

By Miranda Kolbe

The Bucknell equestrian team competed very successfully throughout the '99-'00 show season. The team was composed of thirty-seven members, and about half the team competed on a weekly basis at horse shows. The show team members competed in six shows in the fall and two shows this spring, and ended the season third overall in their league, behind Penn State and Wilson respectively.

The Bucknell team was led by president Allison Bond '01, fall captain Miranda Kolbe '02 and spring captains Melody Smith '03 and Sara Figoski '03. A few of the fifteen schools Bucknell competed against during the regular season included Penn State, Scranton, Duquesne, West Virginia, Wilson and Dickinson.

The equestrian team members practiced once a week at the Summer Breeze Stable under the direction of Jan Phillips and her daughter Farra. Individual members had the option to practice more, and most of the team took this option.

Intercollegiate equestrian competition is different from most other forms of equestrian competition, and it's important to note the major difference. Normally, riders practice on a horse and they take that horse from show to show and compete on that horse. However, in intercollegiate riding, the team travels to the host school and essentially picks horses' names out of a hat, and that is how each rider learns who he/she is riding.

A chart is then posted with a short blurb about each horse, and from that small amount of help the riders have to mount up on their horse and enter the ring without practicing. This difference in competition makes intercollegiate riding very much a "luck of the draw" type of competition.

When the team competed, the members competed for both themselves and their team. At the end of each competition there were awards given for both high point rider and high point team winners. Bucknell was named high point team three times throughout the season and reserve high point team once.

The team members also competed very strongly as individuals, many first places were won by the team in every show. Cassie Powell '00, was named high point rider at the West Virginia competition, and Kolbe, was named reserve high point rider at one of the Penn State meets.

Throughout the season each individual worked to gain points, which were awarded for each placing: seven for first, five for second, four for third, three for fourth, two for fifth and one for sixth. The goal for each member was to point out of his/her class, and to do so they usually needed to have accumulated thirty-five points. When this point total is reached, the rider has qualified for Regional Finals.

This year, five Bucknell riders qualified for Regional Finals, which were held at West Virginia University. The qualifiers were Powell, Bond, Kolbe, Kate Durtan '02 and Emily Johnson '03. Powell, Bond, Kolbe and Johnson ranked high enough to qualify for the Zone Finals at Delaware Valley College in Doylestown, Pa.

There the Bucknell riders competed against schools from Pennsylvania, West Virginia, Delaware and New York. Bond, Kolbe and Johnson all won their classes at Zones, and qualified themselves for the National Intercollegiate Horse Show Association Competition.

The weekend of May 12th to the 14th, they will travel with their coach to Atlanta, Ga. to the International Horse Complex at Conniers, where the Olympics were held. They will compete in their respective classes against riders from across the nation.

Bucknell has the honor this year of sending the most individuals from its Zone to the National Competition. The three women going to Georgia are very excited about representing themselves and their school at Nationals, and following the competition they will immediately begin to think about next year's season, striving to make Bucknell number one.

Peace Frogs have sights set on the national championship

By Kathy Kennedy

The Bucknell women's ultimate frisbee team, the Peace Frogs, started their spring season in the best possible way, winning their first tournament.

It was a small tournament with only five women's teams. The Frogs had gone with only seven players, the bare minimum necessary to play, what ultimate players call savage seven. It's called savage seven because it's so difficult to play an entire day of hard games when you have no subs to relieve you.

Fortunately the Frogs are used to playing savage and didn't let the lack of depth hold them back. They went 3-1, winning the first three games with no contest and losing the last game by only two points, in a game that was capped at seven. The frogs played hard in the last game and put up a good fight, but the long day without subs had been too much.

Fortunately, it was clear through the scores of other games that the Bucknell Peace Frogs were the best team at the tournament. There was a tie for the best record, but after point differentials were studied, the Bucknell women were awarded the trophy.

That tournament was just the beginning of an amazing season for the Peace Frogs. Although they have yet to win their second tournament, the Frogs have maintained a 17-3 record throughout the season, with two of those losses coming in the semifinals of the biggest tournaments of the season to the same team, the Swarthmore Warmothers.

The general trend for the Frogs this season has been to go undefeated, 4-0, on the first day of each tournament and head into the finals play with a high seed.

Carmen Mauriello—The Bucknellian

The Peace Frogs take their 17-3 spring record to Sectionals this weekend at Lehigh. The Frogs have high hopes to advance to Regionals and Nationals.

Unfortunately, the Frogs have met with very the talented competition of the Swarthmore women in the semifinals twice and lost both times.

The first loss came in a very close game, where every point was challenged and both teams played their hearts out. Swat came away with the victory, only two points above Bucknell.

The second game proved that Swarthmore had learned exactly what they needed to do to shut down the Bucknell offense, and they won the game with a score of 13-5. Yet, his score doesn't express how long and intense the game was, and how hard the Bucknell women make the Warmothers work for every point.

But the ending was disappointing and the Frogs realized that even though most of their games were won with ease, they had a lot of work to do if they wanted to realize their dream of reaching Nationals this year. The Frogs have a very distinct chance of earning a spot in the national championship this year, which will be held at the end of May in Boise, Idaho.

Realizing how much work needs to be done, the Frogs have intensified their practices tenfold, running new drills to work on their particular weaknesses, and playing hard every day. All the Frogs have maneuvered their schedules to ensure that they can be at practice every day (or as close to that as possible).

They will find out just how well their hard work has paid off this weekend as they travel to Lehigh for the sectional Competition.

They will compete with five other teams, including Swarthmore, Penn State, UPenn, Eastern and Haverford. The competition will allow the Frogs to see where they stand with the top teams in the section and give them one final chance to determine their weaknesses so that they can perfect their came for the regional competition.

The two top teams in the region, which consists of New York, Pennsylvania, Maryland, Delaware and New Jersey, will continue on to nationals. The fact that the Frogs have even the slightest chance to make Nationals is incredible, since only two years ago they were a team of entirely new players, with only a few veterans to bring the team together.

The most important thing to the Frogs has always been spirit and love of the game. No matter what happens in the next few weekends, the Frogs will never forget this successful season and all the great times they had playing together this semester.

"Regardless of the fact that the Frogs are doing very well athletically, it has not hurt their spirit," Becky Chanoux '02 said. "It is often hard to be on the winning side because it is so easy to lose sight of what is really important in this game—having fun and maintaining good spirit.

The Frogs know where they came from and how it is to be on the other end of the game— when the score is 11-2 against you. They have a very high standard of playing and a very high spirit level."

The Frogs have made it their goal to play the game the way it is meant to be played, with high spirit and highintensity.

"When I look back to the team that I joined as a freshman and compare it to the Peace Frogs of this season, I see women who have made a name for themselves in ultimate frisbee and surprised a lot of people in the process," Betsy Anderson '02 said. "However, even with the tremendous success that we have had this season, the Peace Frogs have maintained a great team spirit and love of the game—and this is what ultimate is all about."

In the spirit of the game: ultimate frisbee

Carmen Mauriello—The Bucknellian

Justin White '02 lays out to block a throw of Matt Ferenc '02.

By Adam Feldman

Two weekends ago, the Bucknell's men's ultimate frisbee team, the MudSharks, traveled to Haverford College for a weekend tournament and saw a change that disappointed them greatly. The post-game cheer, an ultimate tradition for all 25 years of its existence, is slowly fading out of the game. The MudSharks were one of two teams out of 25 that gave a cheer for each and every game that they played. Though the 'Sharks were not very successful on the field, their spirit of the game remained extraordinarily high.

Ultimate follows these guidelines for the Spirit of the Game. It relies on a spirit of sportsmanship, which places the responsibility for fair play in the individual. Highly competitive play is encouraged, but never at the expense of the bond of mutual respect between players and, never with an intention to abuse the agreed upon rules of the game, or destroy the pure joy of play.

Actions that go against these basic principles may hasten the day when players no longer control the game. Playing by the Spirit of the Game will help Ultimate remain a sport where each one of us is free to decide, for them, what fair play means to him or her. No set of rules can replace players' respect for one another and the Spirit of the Game, as stated in the Ultimate Player's Association (UPA) guidelines.

These guidelines (which all teams still follow) will always allow frisbee to thrive. Unfortunately, the cheer has always been an unwritten guideline, and therefore is slowly fading out of the game.

The game is changing.

Ultimate Frisbee, a sport that receives little to no recognition, is making a push to earn more positive publicity. Critics claim that the game is not spectator friendly. Recognizing this the UPA has made a push to change the game to earn more positive publicity.

New rules have been added to speed up the breaks between turnovers and points. Unfortunately, the breaks between games have also been shortened, leaving less time to cheer. Also, as the game becomes more popular it has started attracting better athletes, who have risen the level of play. More time is spent discussing strategy, leaving less time for cheers.

The game is changing.

The top college ultimate teams no longer see ultimate as a club sport, but treat it more like a varsity sport. Teams annually receive new uniforms, are sponsored by major corporations, and even fly across the country to find the competition they desire. Schools, such as Carleton College (consistently in the top five of the country), thrive on ultimate. Almost 85% of the students on campus play, and their varsity basketball players also play on the ultimate team.

The game is changing.

The MudSharks will travel to Lehigh University this weekend to play in one of the most intense tournaments of the year, Sectionals. The best teams in Pennsylvania will meet to decide which teams qualify to play at Regionals.

The 'Sharks, focused on spirit, (not recruiting the varsity basketball team) and still look forward to success during the upcoming weekend. Though the 'Sharks don't have the raw talent (mainly due to injuries), their spirit and love of the game should carry them to a birth at Regionals.

Even though the games will be extremely intense, the 'Sharks will leave the field with smiles, win or lose. The 'Sharks are well known for their spirit and will always remain highly spirited no matter how the game changes.

Matt Fisher: 'Sharks senior leader

By John Martin

What do rewording of classic rock songs, Yoda and the importance of winning a party have to do with the influence of one man on a team? Spirit and dedication—that's what.

Matt "Fish" Fisher '00 has come into this season as the co-captain of a very young Mudsharks ultimate frisbee team. He joins Mike "Droopy" O'Brien and Mike Diamond as the only seniors this spring, leaving the team loaded with inexperienced freshmen and sophomores. No matter the adversary, however, Fish has molded this young team into a serious contender to make Regionals this year.

The one major attribute which Fish has always stressed to the younger players is the spirit of the game. One of the fondest memories of Fish's frisbee career has been the way he remembers how "playing with spirit always came first."

After every game, the 'Sharks would be sure to cheer the other team (a long time tradition of ultimate frisbee, see article on left), and could always be found playing with numerous random toys, with their figurine of Yoda poached on a disc overlooking from the sideline.

It is this sense of tradition and pride for the game which Fish has so keenly striven to instill in the minds of the 'Sharks.

No matter the weather, exhaustion of the team or outcome of the game, Fish always leaves the field with pride and chimes in with wild ideas for cheers.

Whether it may be a clever reformation of classic Beatles or crazy renditions of Eiffel 65's Blue, Fish makes sure that Sharks remain among the elite in keeping the spirit of the game in tact.

Fish's dedication has paid off, as the younger members look up to him as a leader.

"His dedication and team spirit are things we can all look up to and admire," Brian Lowe '03 said. "Fish has been a great team leader both on and off the field. He is a role model for all of us."

And it is not only this spirit which Fish has brought to this year's 'Sharks team, but it is his experience as well.

When Fish was a freshman, the 'Sharks struggled greatly, but the team improved quickly. During his junior year, the team reached a ranking as high as 13 in the nation.

But unfortunately the 'Sharks graduated 12 seniors last year, forcing the team to find young talent to complete the mold with its few returning veterans.

This task was made even more difficult early this spring with injuries to both co-captain Adam Feldman '01 and Tim Scheu '01, really forcing Fish to take charge of the team.

And take charge he has. The team heads into Sectionals this weekend with the real possibility to put on the glass slippers and fight their way to Regionals.

Fish would like to thank Feldman for his large role as motivator and all his coaching from the sidelines, and the contagious enthusiasm which he and Droopy have shown throughout the season. Without these two, the team would not have been nearly as successful as it was.

"Teaching the first-year players how to play has felt very rewarding, and will get more rewarding as they become a Regional powerhouse in the future," Fisher said.

"These Mudsharks have enormous potential for the next few years, and I'll leave with some advice for them: practice every day you can, take advantage of being on this team. Work to improve your game, but never make ultimate practice less fun for anybody, because that's why we're here-to have fun. As you get older, encourage the young players. Always cheer your opponent, always try to win the party and above all else, always play by the spirit of the game."

All the members of the Mudsharks would like to extend their extreme gratitude to Fish, and may the force be with you.

Carmen Mauriello—The Bucknellian

Matt Fisher '00: Four-year Mudshark.

Equestrian team rides into Nationals

By Miranda Kolbe

The Bucknell equestrian team competed very successfully throughout the '99-'00 show season. The team was composed of thirty-seven members, and about half the team competed on a weekly basis at horse shows. The show team members competed in six shows in the fall and two shows this spring, and ended the season third overall in their league, behind Penn State and Wilson respectively.

The Bucknell team was led by president Allison Bond '01, fall captain Miranda Kolbe '02 and spring captains Melody Smith '03 and Sara Figoski '03. A few of the fifteen schools Bucknell competed against during the regular season included Penn State, Scranton, Duquesne, West Virginia, Wilson and Dickinson.

The equestrian team members practiced once a week at the Summer Breeze Stable under the direction of Jan Phillips and her daughter Farra. Individual members had the option to practice more, and most of the team took this option.

Intercollegate equestrian competition is different from most other forms of equestrian competition, and it's important to note the major difference. Normally, riders practice on a horse and they take that horse from show to show and compete on that horse. However, in intercollegiate riding, the team travels to the host school and essentially picks horses' names out of a hat, and that is how each rider learns who he/she is riding.

A chart is then posted with a short blurb about each horse, and from that small amount of help the riders have to mount up on their horse and enter the ring without practicing. This difference in competition makes intercollegiate riding very much a "luck of the draw" type of competition.

When the team competed, the members competed for both themselves and their team. At the end of each competition there were awards given for both high point rider and high point team winners. Bucknell was named high point team three times throughout the season and reserve high point team once.

The team members also competed very strongly as individuals, many first places were won by the team in every show. Cassie Powell '00, was named high point rider at the West Virginia competition, and Kolbe, was named reserve high point rider at one of the Penn State meets.

Throughout the season each individual worked to gain points, which were awarded for each placing: seven for first, five for second, four for third, three for fourth, two for fifth and one for sixth. The goal for each member was to point out of his/her class, and to do so they usually needed to have accumulated thirty-five points. When this point total is reached, the rider has qualified for Regional Finals.

This year, five Bucknell riders qualified for Regional Finals, which were held at West Virginia University. The qualifiers were Powell, Bond, Kolbe, Kate Durtan '02 and Emily Johnson '03. Powell, Bond, Kolbe and Johnson ranked high enough to qualify for the Zone Finals at Delaware Valley College in Doylestown, Pa.

There the Bucknell riders competed against schools from Pennsylvania, West Virginia, Delaware and New York. Bond, Kolbe and Johnson all won their classes at Zones, and qualified themselves for the National Intercollegiate Horse Show Association Competition.

The weekend of May 12th to the 14th, they will travel with their coach to Atlanta, Ga. to the International Horse Complex at Conniers, where the Olympics were held. They will compete in their respective classes against riders from across the nation.

Bucknell has the honor this year of sending the most individuals from its Zone to the National Competition. The three women going to Georgia are very excited about representing themselves and their school at Nationals, and following the competition they will immediately begin to think about next year's season, striving to make Bucknell number one.

Peace Frogs have sights set on the national championship

By Kathy Kennedy

The Bucknell women's ultimate frisbee team, the Peace Frogs, started their spring season in the best possible way, winning their first tournament.

It was a small tournament with only five women's teams. The Frogs had gone with only seven players, the bare minimum necessary to play, what ultimate players call savage seven. It's called savage seven because it's so difficult to play an entire day of hard games when you have no subs to relieve you.

Fortunately the Frogs are used to playing savage and didn't let the lack of depth hold them back. They went 3-1, winning the first three games with no contest and losing the last game by only two points, in a game that was capped at seven. The frogs played hard in the last game and put up a good fight, but the long day without subs had been too much.

Fortunately, it was clear through the scores of other games that the Bucknell Peace Frogs were the best team at the tournament. There was a tie for the best record, but after point differentials were studied, the Bucknell women were awarded the trophy.

That tournament was just the beginning of an amazing season for the Peace Frogs. Although they have yet to win their second tournament, the Frogs have maintained a 17-3 record throughout the season, with two of those losses coming in the semifinals of the biggest tournaments of the season to the same team, the Swarthmore Warmothers.

The general trend for the Frogs this season has been to go undefeated, 4-0, on the first day of each tournament and head into the finals play with a high seed.

Carmen Mauriello—The Bucknellian

The Peace Frogs take their 17-3 spring record to Sectionals this weekend at Lehigh. The Frogs have high hopes to advance to Regionals and Nationals.

Unfortunately, the Frogs have met with very the talented competition of the Swarthmore women in the semifinals twice and lost both times.

The first loss came in a very close game, where every point was challenged and both teams played their hearts out. Swat came away with the victory, only two points above Bucknell.

The second game proved that Swarthmore had learned exactly what they needed to do to shut down the Bucknell offense, and they won the game with a score of 13-5. Yet, his score doesn't express how long and intense the game was, and how hard the Bucknell women make the Warmothers work for every point.

But the ending was disappointing and the Frogs realized that even though most of their games were won with ease, they had a lot of work to do if they wanted to realize their dream of reaching Nationals this year. The Frogs have a very distinct chance of earning a spot in the national championship this year, which will be held at the end of May in Boise, Idaho.

Realizing how much work needs to be done, the Frogs have intensified their practices tenfold, running new drills to work on their particular weaknesses, and playing hard every day. All the Frogs have maneuvered their schedules to ensure that they can be at practice every day (or as close to that as possible).

They will find out just how well their hard work has paid off this weekend as they travel to Lehigh for the sectional Competition.

They will compete with five other teams, including Swarthmore, Penn State, UPenn, Eastern and Haverford. The competition will allow the Frogs to see where they stand with the top teams in the section and give them one final chance to determine their weaknesses so that they can perfect their game for the regional competition.

The two top teams in the region, which consists of New York, Pennsylvania, Maryland, Delaware and New Jersey, will continue on to nationals. The fact that the Frogs have even the slightest chance to make Nationals is incredible, since only two years ago they were a team of entirely new players, with only a few veterans to bring the team together.

The most important thing to the Frogs has always been spirit and love of the game. No matter what happens in the next few weekends, the Frogs will never forget this successful season and all the great times they had playing together this semester.

"Regardless of the fact that the Frogs are doing very well athletically, it has not hurt their spirit," Becky Chanoux '02 said. "It is often hard to be on the winning side because it is so easy to lose sight of what is really important in this game—having fun and maintaining good spirit.

The Frogs know where they came from and how it is to be on the other end of the game— when the score is 11-2 against you. They have a very high standard of playing and a very high spirit level."

The Frogs have made it their goal to play the game the way it is meant to be played, with high spirit and highintensity.

"When I look back to the team that I joined as a freshman and compare it to the Peace Frogs of this season, I see women who have made a name for themselves in ultimate frisbee and surprised a lot of people in the process," Betsy Anderson '02 said. "However, even with the tremendous success that we have had this season, the Peace Frogs have maintained a great team spirit and love of the game—and this is what ultimate is all about."

National Sports

The long ball is still king

By Sean Houston

The first month of the Major League Baseball season is over, and much of the action has gone contrary to most expectations. Yet, one constant has been carried over from last season: the long ball.

Teams and individual players are hitting homeruns at record paces. While it's true that Tony Batista and Jermaine Dye lead the majors with only nine apiece, the St. Louis Cardinals have shattered the record for most homeruns by a team in the month of April. There were 57 homers hit on Friday, Apr. 7, easily shattering the previous mark for most homeruns hit in a day, set two years ago.

courtesy of AP

Homerun King Mark McGwire.

Everyone seems to have his or her own explanation for this phenomenon. One columnist for USA Today feels that the renewal of underground nuclear tests has weakened the planet's gravitational hold on the baseball. Others blame protective body armor, better lighting, a juiced-up ball, El Nino and the Brewers pitching staff. Regardless of what theory one espouses, there's no doubt that the game has entered into a new era where homeruns will be hit at a far greater pace than ever before.

The Florida Marlins (yes, the Marlins) and the Chicago White Sox are tied for he Major League lead in wins. Would you believe the three-time defending NL Central champs, the Astros, have fewer wins than the hapless Brewers? It's still too early for me to eat my prediction about the Mets finishing with fewer wins than the Phillies ... but I'm starting to get worried. The Giants and the Athletics have thus far been disappointing their bay area fans, but they have too much offense and good young pitching to stay in the basement for very long.

Other than the longball, there have been many individual performances that deserve recognition. CF Jim Edmonds has fallen in love with St. Louis and it shows in his on-base and slugging percentages (hitting in front of Big Mac never hurts either.) But the trade that sent him from the Angels to the Cardinals has thus far been a rare example in which both teams win. The players the Angels received in return have been a perfect fit; 2B Adam Kennedy is easily the most impressive rookie in the American League, and except for one rough outing, SP Ken Bottenfield has also done a superb job.

Unfortunately for their fantasy owners, OF Dante Bichette and 3B Vinny Castilla are proving that Coors Field and not talent were responsible for their astounding production numbers when they were with the Rockies.

What can you look forward to by August when classes resume? Juan Gonzalez will still be holding out on signing a contract extension with his lowly Tigers. A-rod will still be playing for the Mariners, the single season record for team homeruns will already be broken by the Cardinals, and the Expos will have drawn more than the Blue Jays.

And the winner is ...

Best bets for this season's NHL end-of-the-year awards

By: Kevin Logan

Jack Adams Award - Top Coach

This one will have to go to St. Louis head coach JOEL QUENNEVILLE for his work in guiding the Blues to the Presidents' Trophy this season. Coach "Q" came to St. Louis in '97, and led the Blues to a Central Division second-place finish (37-32-13 record) last season, including a first-round playoff upset of the Phoenix Coyotes after facing a 3-1 deficit. Quenneville is fourth all-time in games coached (204), with a record of 100-76-28, and is just 10 wins shy of overtaking legendary Scotty Bowman for second in all-time wins.

Also in the running for the Adams Award is Dallas' Ken Hitchcock, who guided the Stars to two consecutive Presidents' Trophies in '98 and '99 and to their first Cup last season.

Hart Memorial Trophy - Most Valuable Player (Regular Season)

St. Louis' CHRIS PRONGER is the strongest candidate for the Hart after posting the best regular season of his career, with 62 points and 14 goals. A solid defenseman, Pronger's size, speed and strength was a major factor in the Blues' first-place finish this season.

Pittsburgh's Jaromir Jagr, last year's winner, is a close runner-up - and it wouldn't be a surprise to see him take the Hart again. Jagr was the league's leading scorer with 96 points, including 42 goals, and no doubt was a primary reason for the Penguins being able to nab a playoff spot at the end of the season. Florida's Pavel Bure challenged Jagr for the scoring title, but fell just two points short with 94. Regardless, his league-leading 58 goals propelled the Panthers into the playoffs, which puts him in contention for the Hart as well.

Calder Memorial Trophy - Rookie of the Year

This one's sure to fall into the hands of New Jersey's SCOTT GOMEZ. Gomez played in all of the Devils' 82 games in his inaugural season, and led all rookies in scoring with 70 points and 19 goals.

Flyers goaltender Brian Boucher is up for the trophy as well, having posted a league-leading 1.91 goals against average in 35 games with Philadelphia, including four shutouts and a 20-10-3 record. Boucher helped lead the Flyers to the Eastern Conference title this season.

Franke J. Selke Trophy - Best Defensive Forward

Edmonton's TODD MARCHANT is the best bet for the Selke. Marchant proved that not only can he contribute offensively (40 points), but he also has a strong ability to turn around, block shots, break up plays, and forecheck, making him an excellent two-way player.

San Jose's Mike Ricci has a good chance at snagging this trophy as well. Ricci, who recorded 44 points this season, lived up to his reputation as an aggressive, antagonizing, and defensive-minded individual. The Blues' Michal Handzus, in just his second season, is also in the running. At 6'5"-210, Handzus is solid defensively, in addition to having a 53-point season.

James Norris Memorial Trophy - Top Defenseman

In addition to the Hart, CHRIS PRONGER is the top choice for the Norris as well. While the 6'6"-210 Pronger has established himself as a proven scorer, his greatest attribute is his tough defensive game (including 92 penalty minutes and a plus-minus rating of +52 this season), which helped lead St. Louis to the top spot in the league.

Detroit's Nicklas Lidstrom, one of the league's underrated defenseman, and L.A.'s Rob Blake are also up for the award. Lidstrom was a +19 this season, while Blake compiled 112 penalty minutes and was a +10.

Courtesy of AP

Chis Pronger: MVP favorite

Vezina Trophy- Top Goaltender

While he may not have had the best numbers in the league, Washington's OLAF KOLZIG may capture the Vezina for backing the Caps to a second-place finish in the East after a mediocre first half of the season. "Olie the Goalie" posted a 41-20-11 record with five shutouts and a GAA of 2.24.

Dallas' Ed Belfour (32-21-7, four shutouts, 2.10 GAA), New Jersey's Martin Brodeur (43-20-8, six shutouts, 2.24 GAA), and St. Louis' Roman Turek (42-15-9, seven shutouts, 1.95 GAA) are also candidates. Buffalo's Dominik Hasek, who took the award five of the past six years, could have been the top choice had he not been plagued by injury this season.

Lady Byng Memorial Trophy - Sportsmanship

Wayne Gretzky took this one home five times, his most recent being last season with the Rangers. This year, it looks like the trophy will be passed on to NICKLAS LIDSTROM. While Lidstrom is one of the top defensemen in the league, he plays the game cleanly, only recording 18 penalty minutes this season, while scoring 73 points and having a +19 rating.

Pavel Bure is also a possibility. While leading the league with 58 goals and finishing with a +25 rating, Bure only sat in the box for a total of 16 minutes.

Anaheim's Paul Kariya, two-time winner of the Lady Byng, is again in the running. He racked up 86 points and a +22, with 22 penalty minutes.

Maurice Richard Trophy- Top Goal Scorer

This award went to Pavel Bure, whose 58 goals scored led the league.

Willian M. Jennings Trophy - Goaltender with Lowest Goals Against (Team)

Roman Turek walked away with the Jennings as St. Louis allowed just 165 goals this season.

Art RossTrophy- Top Scorer

Jaromir Jagr claimed this one after recording a league-leading 96 points.

Conn Smythe Trophy - Most Valuable Player (Playoffs)

It's still too early to tell who'll win this one, but Jagr is a strong possibility after helping the Pens to upset Washington in the first round and already notching 10 points.

Top ten sporting events of the past year

By Rob Schmicker

As another school year comes to an end—lets take a look back at the top stories in the sports world during the 1999-2000 academic year.

10. A New Rivalry? In what may be a sign of things to come, Tiger Woods defeated Sergio Garcia by one stroke to win the 1999 PGA Championship. Although Woods was the overwhelming favorite to win the title, most eyes were on Garcia during the final round. After hitting an incredible shot off the bottom of a tree to save par, Sergio sprinted down the fairway to get a good look at his shot. Besides being exceptional golfers, Woods and Garcia are young—23 and 19 respectively—and fun to watch. And with a sport that is normally regarded as non-athletic and boring, it is exactly what brings new fans to the game.

9. Another Home Run Chase. They captured our imagination in 1998. How could they follow up the magical summer in which they both destroyed Roger Maris's home run record? How about with another home run chase? Mark McGwire and Sammy Sosa both started out slow, but came on strong to finish with 65 and 63 home runs, respectively. But even though their battles have saved baseball, they still were not able to save their teams—both suffered another losing season.

8. 3000 Hit Club Welcomes New Members. Within a year of each other, Wade Boggs, Tony Gwynn, and Cal Ripken all reached the immortal 3000 hit-mark. All three will go down in history as the best pure hitters of our time—a trip to the Hall is inevitable for each of them. And what is even better is that all three spent most—if not their whole career—with one team. Before getting his 3000th hit with the Devils Rays, Boggs spent 11 seasons in Boston before winning a World Series title with rival Yankees. Ripken and Gwynn have spent with their whole careers with the Orioles and Padres, respectively.

7. Michigan St Wins NCAA final. Michigan State beat Florida to win the 2000 National Championship. In a tournament full of surprises, Michigan State was able to avoid an upset and took home their first title since 1979, when they were led by Magic Johnson. In a seldom seen act, Mateen Cleaves passed up the big bucks from the NBA to return to school for his senior year. After a pre-season injury, he led the Spartans to a 26-7 record and a top seed. In the final, he injured his ankle and then made a gutsy return to help the Spartans win 89-76. He made a valuable point—stay in school. After all, look how it turned out for him.

6. David Cone Throws Perfect Game. It seems as if this happens every year—a Yankee throws a no-hitter in front of the home crowd. This year's hero was David Cone, who threw a perfect game against the Montreal Expos. And he did it on Yogi Berra day. After several years of tension between Berra and Yankees owner George Steinbrenner, Berra was honored making the day extra special. Also attending the game was Don Larsen, the only pitcher to throw a World Series perfect game. It seemed almost too good to be true, but Cone rose to the occasion and quickly became the man of the town.

5. Redemption. Every November, football fans in Texas anxiously await one game—Texas vs. Texas A&M. But this year the game had extra meaning. A week earlier, 11 A&M students and one alum died when their giant bonfire collapsed. The entire A&M campus was full of tears for the week leading up to the Aggies biggest game of the year. Now the team had another reason to win—to honor those who had been tragically killed. After trailing 16-6 at halftime, the Aggies held Texas to 89 total yards in the second half and upset the favored Longhorns 20-16. After the game, the all-too-familiar sight of tears was once again seen on the A&M campus, but this time they were for joy.

4. Sean Elliott returns. The Spurs had just defeated the New York Knicks in five games to win the NBA title. But that was the last thing on Sean Elliott's mind as he learned that he might have kidney failure. Fortunately, his brother was a match and was able to give him his kidney. This saved Elliott's life—as well as his basketball career. Throughout, he remained positive in hope that he might play in the NBA again. Then on March 14, Elliott returned to the Spurs lineup against the Atlanta Hawks. He played 12 minutes and scored two points. In doing so, he became the first player in sports history to successfully make a return from kidney replacement.

3. US Women Win World Cup. By now, almost every American has seen or heard about it. The US Women's soccer team captured the 1999 World Cup with a shootout victory over China, 1-0. Playing in front of a sold-out Rose Bowl (90,185 people to be exact), Brandi Chastain knocked home the title clinching penalty kick—and then celebrated by taking off her shirt. While many will be quick to remember Chastain's disrobing, the game will ultimately go down as the biggest moment in women's sports history. Not only did they take home the title on US soil, but they have also given thousands of young girls someone to look up to in a male-dominated sports world.

2. Rams Win Super Bowl. Super Bowl XXXIV featured one team who had never made it to the Super Bowl and another who had the dubious distinction of being the worst team of the 90's. What does that add up to? Simply put—the best Super Bowl ever. Newfound hero Kurt Warner led the St Louis Rams against Eddie George and the Tennessee Titans. After trailing 16-0, the Titans came all the way back to tie the game, 16-16 with less than two minutes left. Then Warner (who threw for a Super Bowl record 414 yards) found Isaac Bruce for a 73-yard TD to give the Rams a 23-16 lead. Tennessee, led by QB Steve McNair, answered with an 80-yard drive—only to be stopped a yard short. Kevin Dyson was tackled—as time expired—to give the Rams and Dick Vermeil an emotional and well-deserved victory.

1. Armstrong Wins Tour de France. When Lance Armstrong learned that he had testicular cancer on October 2, 1996, he thought he was going to die. Three years later, Armstrong won cycling's ultimate prize, the Tour de France. In between, he saw a tumor develop in his brain and instead of chemotherapy; he had surgery to remove it. He never lost hope of racing again. He lost 15 pounds and as a result actually became a better racer. With a new body, Armstrong worked harder than he ever had before and as a result won the grueling two-week race. His journey has given everyone hope. Not only did he beat cancer, but he was also able to come back and be better at what he did. That is the best inspiration possible.

St. Louis singing the blues

No. 1 Blues Ousted by Sharks in Dramatic Game 7

By Kevin Logan

Of all the playoff series—East or West—this was probably the one matchup that certainly shouldn't have gone past a fifth game...if a fourth. The St. Louis Blues were the winners of the Presidents' Trophy; they were the best team in the league; they set franchise records for wins and points. The San Jose Sharks were two games under .500 and just barely caught the eighth spot to earn a playoff berth. More importantly, the Blues had absolutely no trouble with the Sharks during the regular season, going undefeated in five head-to-head meetings.

But past a fourth game it went. And past a fifth. And all the way on to a seventh. Ironically, the series could have ended in five...but with San Jose on top instead, after the Sharks jumped to a stunning 3-1 series lead, seeming to thrive on their underdog status.

The series started off as expected with St. Louis taking Game one by a 5-3 decision. However, the next three games would belong to San Jose. Game two was in part thanks to a fluke goal in which St. Louis defenseman Marc Bergevin literally gave the Sharks their first goal. Bergevin gloved a lofty dump-in out of mid-air and - instead of flipping it behind the net - pitched it directly past goaltender Roman Turek to tie the game at one. The Sharks went on to win 4-2.

Owen Nolan was the key factor in Game 3, scoring both the Sharks' goals to edge out St. Louis 2-1. Another bounce would go the Sharks' way in Game 4 when Gary Suter's one-timer deflected off Jamal Myers' stick and took a bad hop to find its way by Turek. Steve Shields stoned a point-blank Chris Pronger shot as the green light came on at the end of the third to preserve the Sharks' 3-2 victory.

The Blues took Game five, 5-3, and then absolutely humiliated the Sharks in Game 6, 6-2, to knot the series and force the only Game seven of the first round. In that game, St. Louis enjoyed a 6-0 lead at one point, exploding for four goals on four straight shots (and five goals on nine shots) in the second period. Everything they touched just seemed to make its way into the net behind Steve Shields. Scott Young notched a hat trick in the game.

So it seemed the Presidents' Trophy-winning Blues had returned just in time to prevent being eliminated in the first round. But this was Game 7 and anything can happen. With the Sharks holding a 1-0 lead and just 10 seconds remaining in the second period, Owen Nolan fired one from just inside the red line that Turek's glove couldn't handle. The goal—Nolan's sixth of the playoffs and eighth point—took the wind out St. Louis' sails. It turned out to be the game-winner, and the Sharks went on to complete their upset with the 3-1 victory.

DALLAS 4 EDMONTON 1:

Both teams met in the first round last year as well, and the Stars swept Edmonton in that series. It took an extra game this time, but the defending Stanley Cup champ Stars again advanced to the second round after eliminating the Oilers four games to one.

COLORADO 4 PHOENIX 1:

The Avs were favored and the Avs won in five games. It was a near sweep, but the Coyotes were able to pull out a 3-2 Game 4 win to stay alive and push a Game 5. After suffering the Game 4 setback, the Avs got back on track with the help of Peter Forsberg's game-winning goal with under six minutes remaining in Game 5 to advance to the conference semifinals.

DETROIT 4 L.A. 0:

The Wings flew away with this one. They needed no more than the required four games to eliminate L.A., outscoring the Kings by a total of 15-6. It may have only lasted four games, but the series featured it all: there were two shutouts (courtesy of Chris Osgood), a wide-open scorer's dream 8-5 shootout (Game 2), and a tight one-goal game (Game 3).

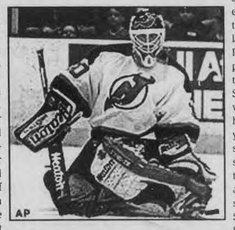
PHILADELPHIA 4 BUFFALO 1:

It was a series marred by controversy, but the Flyers eliminated the Buffalo Sabres in five games. After losing the series opener 3-2, the defending Eastern Conference champion Sabres had a 1-0 lead in the second period of Game 2 when John LeClair ripped a shot from the faceoff circle that broke through a hole in the side of the net to tie the game. The "goal" was counted as video replay officials did not take notice until after the ensuing faceoff. Philly went on to win the game on a Desjardins goal in the third period.

After both teams split games 4 and 5, Philadelphia came out on top in Game 5 by a score of 5-2, thanks to a pair of goals by Daymond Langkow.

PITTSBURGH 4 WASHINGTON 1:

Even if it was a fluke goal, the Penguins still completed their upset of the second seeded Capitals with a 2-1 victory in Game 5. Jaromir Jagr tallied the game-winner (his third playoff goal) on a cross-ice pass that deflected off Calle Johansson and redirected past goalie Olaf Kolzig. The victory eliminated the Caps, who had mounted an enormous comeback the second half of the season to nearly take first overall in the East.



TORONTO 4 OTTAWA 2:

The Maple Leafs came out on top of the intense rivalry known as the "Battle of Ontario". They dominated the first two games, including a CuJo-backed 2-0 shutout in Game 1. The Senators then won Games 3 and 4 to knot the series at 2-2. Game 5 would require overtime, allowing Steve Thomas to net his second of the night to give Toronto a 3-2 series lead. Thomas tallied another goal and assist in Game 6 to send the Leafs onto the second round with a 4-2 victory.

NEW JERSEY 4 FLORIDA 0:

The Devils flopped as the regular season wound down and lost the top spot in the East, which they held for nearly the entire season, for fourth place. But New Jersey seems to have returned to old form as they swept the Panthers—just the second playoff sweep in franchise history (the other against Detroit in the '95 Stanley Cup finals). The Devils edged out Florida in the first three games by just a goal, but completed the sweep by a 4-1 spread.

Picks:

Philadelphia (1) vs. Pittsburgh (7):

The Flyers may not sweep, but they won't have too much trouble getting by the Penguins. Pittsburgh has an absolutely awful record against the Flyers, as evidenced by their 0-5 record head-to-head this season. They're also superior on the power play and when short-handed. That isn't to say that the Pens don't have a shot; after all, they proved everyone wrong by upsetting the Capitals in the first round. And don't forget they've got one powerful weapon in league-leading scorer Jaromir Jagr.

Pick: Philly in five.

Toronto (3) vs. New Jersey (4):

The Leafs won the season series 3-1, but both teams had similar regular season records (45 wins). Furthermore, the Devils have the advantage in special teams, both the power play and down a man. In terms of goaltending, both teams have proven netminders, but New Jersey's Martin Brodeur has the edge, which could turn out to be a deciding factor in the series.

Pick: New Jersey in seven.

Dallas (2) vs. San Jose (8):

This one could be more interesting than people might think. Already, the Sharks have proven they can pull off the upset, and Dallas doesn't have the Presidents' Trophy-winning team the Blues do. The Sharks have also won the head-to-head meetings this year 4-2. Yet the star-studded Stars still were the better team this season and, and as impressive as Steve Shields was against St. Louis (excluding Game 6), Ed Belfour has more experience, which gives him an important advantage.

Pick: Dallas in six.

Colorado (3) vs. Detroit (4):

Four out of the five meetings went to the Wings this season. Detroit also has a slight advantage in terms of the power play, but the two teams are about equal in penalty killing. Also, both have solid goaltenders with playoff experience. The Avs do have an extra boost since acquiring Ray Bourque, but both teamshave plenty of big guns to make for an close series.

Pick: Detroit in six.

Pick for the Cup: It could be a rematch of the '95 Detroit-New Jersey Cup finals, especially with Lindros' return to the Flyers in doubt. Whatever happens, the Cup will be taken home by a Western Conference team, most likely the Red Wings, but I have a hunch is going to be the Penguins.

NBA Playoff Picks

By Ali Ahmed

Last issue since I made the stupid decision of picking the Sonics to beat the Jazz in the first round I will attempt to make less bold decision.

Staying with the West—as shown in the first game the Suns—should win out against the Spurs due to their superior depth. The Spurs with Duncan are dominating, but they will need to get past the Suns without him. How far the Suns get depends on how well they do without Jason Kidd.

They do, however, have playoff veterans who could run the team, such as Kevin Johnson and Penny Hardaway. But without Gugliata and Kidd they will have to wait. The Lakers, as expected, will have trouble with the Kings, but should advance to meet the Suns in the next round. The Lakers should win—they play good defense, and Kobe and Shaq should be absolutely impossible to stop.

The most intriguing first round match-up was the Blazers and the Wolves. A lot of people thought that the Wolves would have an upset here—especially since Pippen and Smith had not played well during the regular season. Expect Smith to take more shots and Pippen to dominate more defensively and run the team.

How well the big men of the Blazers play—along with their ability to stay out of foul trouble—will determine how far they go. Expect Pippen, Smith and Detlef to play more now that the playoffs have started. In the second round the Blazers should have a couple of tough games against the Jazz but they will dominate the two spot matchup where the Jazz miss Shandon Anderson. Karl Malone versus Grant and Wallace should be very interesting. Karl Malone has proven himself to be the best power forward ever and Wallace has the physical abilities to be the best at that position.

It should be the Blazers and the Lakers in the western conference final. It is a shame that the Blazers and Lakers can't meet in the finals—they will have to face a weak Eastern team in the final.

I think that the Blazers have the depth, defense and rebounding, as well as the experience to beat the Lakers. Nobody ran the triangle offense better then Pippen and he could be key to disrupting their offense. Lakers should make a run—unless Glen Rice can become a factor and Green and Horry can somehow guard Wallace—the Blazers will win even with big games form Shaq and Kobe.

Indiana has won the first game. It is not safe to assume that they will come out of the first round. The lack of production from Reggie Miller should be a source of concern for the Pacers.

Eddie Jones finally has the national stage to show that he is among the elite guards. He has no weaknesses, and his defense shut down Allen Iverson in the second game. Combined with a good front court and a solid back, Jones should help lead his Hornets to the next round to face the Pacers. They will beat the Pacers/Bucks in the second round.

The key to the match up will be Jalen Rose versus Anthony Mason. Whichever one stays out of foul trouble should win out.

The most boring first round match up is the Heat taking on the Pistons—both Tim Hardaway and Grant Hill are out. This might have been the last time we saw Grant Hill in a Pistons uniform. He wants to play for a winner—and the Pistons are not it.

There is a lot of talk about the Heat possibly being rebuilt in the off season—they might play more exciting basketball.

Heat should advance easily. A stark contrast between the Miami/Detroit series the Knicks and the Raptors series includes the best two teams in the East. Too bad they face in the first round. The Knicks are a special team in the playoffs, but the Raptors are too athletic and big at the skill positions to lose. Sprewell is a great defender but he will not limit Carter to the same numbers again.

The two people key to this series will be Christie and McGrady. People will look at how talented McGrady is instead of keying in on Carter. In the second round Toronto should bet the Heat—with ugly games.

The final should be made up of two young teams the Hornets and the Raptors which should be a very interesting match up. This will be a refreshing change form the dominance of Indiana, Miami and New York. This is a very hard series to call—it will come down to which superstar steps up. These teams should dominate the East for years to come if they can sign key players in the off season. Look for Eddie Jones to have a huge series and be the MVP. However, the Raptors have enough rebounding and defense in the front court to beat the Hornets.

So at the end, it might be the Raptors and the Blazers. The Raptors played well in their last regular season meeting the Blazers, but they don't have the talent to win a seven game series. Look for Carter to get points, but the rest of the team will struggle. The Blazers have too many offensive weapons for the Raptors to stop.

This year look for Paul Allen to reap the rewards of the team that his deep pockets bought. As strange it might sound, but look for Rasheed Wallace or Scottie Pippen to be the MVP. Maybe Pippen can finally prove he did not need Jordan to win. I hope he does.

By Justin McCarthy

In the East and West, most first round series have been close games. This makes for a great postseason—the regular season means nothing, now is the time to play the hardest and bring out the champions. Many players are stepping up to fill that role, while many are crumbling under the pressures that come with it. The winners will be the ones whose leaders are able to step up and soar higher.

In the East, my favorite for the championship ring is the defending Eastern Conference Champion New York Knicks. Their route to meeting the Western Conference Champion, after disposing of Toronto, will take them through Miami and then Indiana, their two archrivals.

A big surprise this postseason has been Vince Carter's play against the Knicks. During three games this season, he dominated one of the best defenses in the league and led the Raptors to victory. However, the regular season is over and Carter has crumbled under the pressures of his first playoffs.

After bringing down the Raptors, the Knicks will face a team identical to their style of play—the Miami Heat. It was the current Heat coach, Pat Riley, that perfected the rough no-holds style of play that both teams utilize. The Heat should be able to easily finish off the Pistons in their best of five series, which they lead 2-0, especially since Grant Hill is out for the remainder of the playoffs because of a fractured left ankle.

The Knicks and Heat have met in the playoffs for the past three years—the past two, the Knicks have won. These battles are always very physical and result in at least one on court skirmish with suspensions. This series will surely supply some on court fireworks. But will the fireworks consist of individual's outstanding plays? Doubtful. We are sure to see at least one on-court melee.

The matchups that are integral to both teams—deciding the series—are between Sprewell vs. Mashburn and Ewing vs. Mourning.

After burning out the Heat, the Knicks will face the Indiana Pacers in the Eastern Conference Finals for the second straight year. The Pacers, though, will have a tough road to cross—they need to get by the Sixers. The Sixers will be invigorated after taking the the Hornets with Iverson and Kukoc.

The Pacers will advance past the young Sixers with their superior players—both those who start and those who come off the bench. The Pacers will look to Miller to neutralize the high soaring Iverson, and if successful, the Sixers will exit the playoffs earlier than the six games. The Pacers were eliminated by the Knicks last year in the Eastern Conference Championship in six games; and this year the same results will occur, give or take a game. The Knicks now have a healthy Ewing to provide them with a low post threat to compliment the scoring prowess of Sprewell and Houston.

This makes them a better and stronger team than last year, when they made their run to the NBA Finals. The key to the Knicks' victory will be for Sprewell to shut down Jalen Rose—of which he is capable. Proof is what he has done so far in the first round against Vince Carter—holding him to 3 for 20 shooting in the first game and to a 21.5 ppg average, well down from his average of 33ppg against the Knicks during the regular season. The Knicks will repeat as Eastern Conference Champions, however, Ewing will fall short again in his attempt to win the Championship that has eluded him his entire career.

In the West, the L.A. Lakers will reach the NBA finals. The Lakers have been known to choke come playoff time—being eliminated the past two years. However, this year will be different. Glen Rice increases his role in the offense he gives the Lakers a third established scoring threat to compliment Shaq and Kobe. With Rice's shooting ability, Bryant's driving and slashing ability and O'Neal's dominance of the paint, the Lakers are virtually unbeatable.

The Lakers will have to duel it out before being hailed as Western Conference Champions. After the Lakers steal the King's crown they will face the defending NBA Champion Spurs, who defeated them three times this season.

The Spurs are practically the only team who have the capability to matchup with Shaq and the Lakers in the frontcourt with their Twin Towers of Duncan and Robinson. However, that capability may be hindered by the status of Duncan, who is currently out with a knee injury. And even if he returns, he surely will not be as effective. The Lakers opponent in the Western Conference Finals will be the Portland Trailblazers. The Blazers, however, will have a tough time defeating the Jazz to reach the Lakers.

The Blazers have a slight advantage at the center position—a much younger duo of Stoudamire and Smith. Another intriguing matchup will be that between Pippen and Malone, which is a sequel to their duel in the NBA finals when Pippen was with the Chicago Bulls. The Blazers will be victorious, due to their vastly deeper and superior bench. The Blazers, though, will fare no better against the Lakers than any of L.A.'s other playoff victims. Unlike the Spurs, the Blazers do not have the ability to matchup with Shaq in the frontcourt. Granted, they may be able to contain him minimally with double teams from Pippen or Wallace to help Sabonis when O'Neal is in the post. However, that leaves someone wide open—and with players like Bryant and Rice to support Shaq—the Blazers will be in a dilemma.

The Blazers will succumb to the Lakers dominance in six games, and the Lakers will advance to the NBA Finals to face the New York Knicks.

The Knicks actually matchup pretty well with Lakers at every position, except of course in the middle with Shaq; however, Ewing seems to have been revived this season as he is playing some of the best basketball of his career. To win, the Knicks will need to contain Bryant. they have no hope of stopping Shaq who averaged 38.5ppg against the Knicks in two games this season.

New York will look to Sprewell to dominate Rice—a task he performed quite well during two seasonal meetings. They will also need to bury their outside shots and will need to double team Shaq in the post whenever possible.

The best defensive strategy against Shaq is to make him earn his points from the free-throw line, and to not let any of his shots go uncontested.

The Lakers will need Shaq to plow his way through the middle and Kobe to take defenders off the dribble, for the Knicks were able to stifle every other Laker in two previous matchups.

For the Lakers to win they will need Rice to control Sprewell—he will need to contain him on the offensive end and break away from his defensive pressure on the other end. Ultimately though, just like virtually every other Laker opponent, the Knicks will be on the losing end when the final buzzer sounds.

NBA CHAMPIONSHIP RESULTS: L.A. Lakers over N.Y. Knicks in Six Games.

THANK YOU CLASS OF 2000!!!

71 % PARTICIPATION

We're Marking The Millennium!

Thanks to all the *generous seniors* who pledged to the drive, our class has reached its goal and the **Highest Participation Level Ever** in the **32-year** history of the **Senior Gift Drive!**

We successfully raised $17, 762, which combined with the **Parent Challenge** of $30,000 makes our

total gift to BUCKNELL $47,762!

Everybody's help - *donors, campaigners, committee members, and staff members* – **allowed us to reach our goal and is greatly appreciated!!!**

***Special Thanks* to the Senior Gift Drive Steering Committee!**

Sports

BU sports stories to remember

By Rob Schmicker

Once again, Bucknell is leading the race for the President's Cup Trophy, given to the top athletic program in the Patriot League. We are the defending champs and have won six of the nine titles since its inception.

So there's plenty of exciting moments to choose from. With all all due respect to those who didn't make it, here is my list of top five Bucknell sports' stories for the past academic year.

5. Ice hockey wins title

The men's ice hockey team captured the Mason-Dixon title this year after going undefeated during the regular season. This year the Bison exorcised there past playoff demons by beating three teams en route to the title.

In the opening game of the tournament, the Bison defeated Penn State Delaware County, 11-2, in front of the largest crowd in BU history. Right off the face-off you could sense something special was about to happen. The Bison were just out-classing Penn State and the game was over after the second period.

In the second game, Bucknell traveled to face Loyola. After three periods, nothing had been decided, as the two teams headed into OT tied 2-2. In net, Paul Van Dillen '01 kept the Greyhounds off the scoreboard during overtime. 40 seconds into the period, sophomore Nate Ledyard sent the Bison to the finals with his second goal of the game.

The Bison's final game came against a Navy team that they had swept the previous year. Like the Loyola game, it was scoreless after one, and Bucknell jumped out to a 2-0 lead in the second.

Feeling overconfident, Bucknell let up and Navy capitalized—scoring two goals to knot the score at two. Then the teams traded goals again and went into OT tied at three.

Once again Van Dillen was strong in the net, enabling Bucknell plenty of opportunities. With twenty seconds left, Alex Dixon '00 found Eric Silvestri '03 for the game and title-winning goal. Winning the title without much funding and without a coach says a lot for the Bucknell hockey team.

4. Women's b-ball has ups and downs

The women's basketball team had an up and down year this past season. They started off with a 5-8 non-conference record, including a 42-point loss to Kent.

But conference play turned out to be much kinder to the Bison, who went on to win their first seven Patriot League games—including a victory over defending champs Holy Cross. The team then lost five of its next six heading into the Patriot League tournament.

In the tournament, the Bison put their struggles behind them and proceeded to the finals with relative ease. Waiting for them were the Crusaders of Holy Cross, with a NCAA birth on the line.

The Bison played a hard game, but ultimately lost 87-63 to the Crusaders, who lost to by #2 Rutgers in the first round of the NCAAs.

Even though they came up a little short, the Bison's performance this year showed that they will be one of the teams to beat in the future. Next year they return 8 of 11 players, including three starters.

But they will miss the leadership of Lori Houck '00, who leaves as the second leading scorer in Bucknell history, as well as seniors Jen Winhofer and Lyndsay Earhart.

3. Men's golf gets robbed

The men's golf team finished second at this years Patriot League tournament—its best showing ever. And had it not been for an unfortunate incident involving an incorrect scorecard, the Bison would have gone home as the champions.

Nick Leibowitz '02 walked away from the second round with a two-under par 70, but his round. On the fourteenth hole, his playing partner from Army credited him with a two when in fact he had shot a three. It was Leibowitz's responsibility to also keep his score and check it with what his partner has marked down. Leibowitz signed his name without detecting the inconsistency and was disqualified.

With that, Bucknell was forced to use the second lowest score, which turned out to be an 81, 11 shots more than Leibowitz's round of 70. Bucknell's lead turned from 19 to eight and Navy was able to pick up 11 shots in the final round to go home as the winners.

Expectations weren't very high going into the championships, so on a normal day, the Bison would have been happy with a second-place effort. But this was bittersweet, as they watched Navy take home the trophy, when they actually had won.

Unfortunately rules are rules and—no matter how honest the mistake was—the Bison had to accept the penalty.

2. Bucknell football shocks Colgate

After an opening week victory over non-conference Morgan St, Bucknell was faced with the daunting task of playing nationally-ranked Colgate in Hamilton, N.Y. to kick off its conference schedule.

Early in the game, the Bison defense set the tone. It held Colgate to no first half touchdowns, the first time that had happened in 35 games for Colgate.

Bucknell got on the board in the second quarter after a 66-yard drive, and then following sophomore George Cowan's interception, the Bison went in for a 14-yard touchdown to go up 12-0. Before the half the defense made another key play, holding Colgate to a 23-yard field goal to keep a 12-3 advantage heading into the locker room.

In the second half, things remained the same for the Bison, as they upped their lead to 19-3. Then after pinning Colgate deep into its own territory, Shawn Redd '00 tackled Colgate QB Ryan Vena in the endzone for a safety and a 21-3 lead. From there, the Bison held on for a 21-16 win.

With the win, Bucknell gained national recognition and went into the rest of the season with high hopes. Unfortunately they would finish with a record of 7-4, 3-3 in Patriot League play. Colgate would go on to edge Lehigh for the Patriot League crown, as the two tied for the league title with 5-1 conference marks. But for one day in September, all eyes were on the Bison, as they shut down Vena and the high-powered Colgate offense. With a solid core of returnees, Bucknell football has high expectations for years to come.

1. Women's XC 24th in nation

The Bucknell women's cross-country team had its best showing ever, finishing 24th in the nation at the NCAA Championships held in Bloomington, Indiana. The Bison made the field as one of 13 at-large bids after winning the Patriot League title for the second straight year. Then at the Mid-Atlantic Regionals, they finished third behind Georgetown and Villanova, two perennial powers.

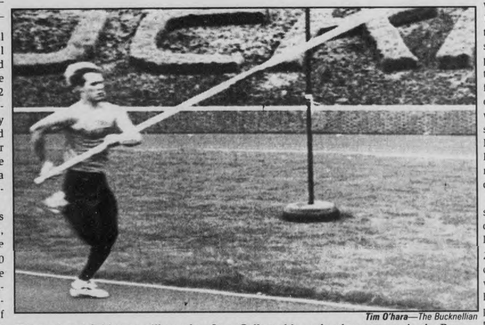
At the NCAA Championships, the women had an incredible day. After winning the individual Patriot League title, Becki Marshall '02 placed 96th overall (out of 254 runners) with a time of 18:00.50 at the national meet.

Freshmen Andrea Beisser and Theresa Dennis also had strong showings, coming in 126th and 143rd respectively. And in their last Bucknell race ever, seniors Jen Hart and Carly Graystock took 153rd and 181st respectively.

The Bison ended with 546 points, good enough for 24th place, ahead of some large scholarship schools like Notre Dame, Florida, Duke and UCLA. It was truly an amazing performance that put Bucknell in the national spotlight.

Bison brave weather, come out victorious.

By Matt Herbert



Tim O'hara—The Bucknellian

The track and field team will travel to State College this weekend to compete in the Penn State Relays. The Patriot League Tournament is May 5 and 6 at Lafayette.

In less than ideal conditions, the Bucknell men's outdoor track and field team dominated on the track this Saturday, April 22 in a dual meet with Shippensburg. "It was pretty cold out, but we managed to presevere", said hurdler Richard Alexander '03. The Bison won the meet with a final score of 127-36, winning 15 of 20 events.

The Bison seniors put on an impressive show, competing at home for the last time. Dave Pomfret '00 beat his own school pole vault record, set last weekend, by three inches, winning with a clearance of 16'3". Steve Williamson '00, Ron Hess '00 and Brian Schiding '00 were all double winners for the Bison. Williamson won the 200 and 400 meter runs, while Hess won the 800 and 1500 meter events. Schiding took gold in the long and triple jumps. Williamson recorded a 22.17 in the 200 meters and a 49.66 in the 400 meters. Schiding triple jumped 44'10" and set a personal best of 23'8" in the long jump. Matt Kaplan '00 won the hammer throw with a toss of 163'5", and put himself sixth on the Bucknell all-time performer list. Matt Solomon '03 also turned in a stellar performance, winning the 100 meters in a time of 11.13.

The women's team was not to be outdone however, winning 18 of 19 events for a final score of 135-27. Seniors on the women's side also put up an impressive performance led by Kim McGrath '00 and Sara Vargo '00. Both were double winners for the Bison. Vargo won the 100-meter hurdles in12.18 seconds and the javelin with a toss of 116'3". McGrath claimed the long jump with a leap of 17'4.5" and triple jump with a distance of 38'10.25".

Jen Kirschner '00 captured the hammer throw with a toss of 161'2" while Lori Allen '00 won the shot put with a 41'9" throw. Fellow classmate Audrey Myers '00 added another gold medal for the Bison with a discus throw of 134'8". Khadija Shariff '00 turned in another outstanding performance, placing herself second on the all-time performers list for 400 meter hurdles, clocking a 1:02.52, just one week after setting the school record. Andrea Nyce '02 rounded out Bucknell's gold medal winners with a pole vault clearance of 10'.

The Bison will split their squad next to compete at the historic Penn Relays, held April 25-29 at Franklin Field in Philadelphia, PA and at Millersville, this coming Saturday. Both meets prove to be good preparation for the Bison as the Patriot League outdoor track championships near.

"We've got Penn Relays this weekend. That will be a good opportunity for our top people to get a taste of strong competition again. Everything so far has been building up to Patriot Leagues, hopefully now we can just get some good weather," said captain Dave Pomfret. Fellow captain Steve Williamson agreed. "Everyone has been getting better, step by step. As long as everyone is healthy we should put up a strong performance."

Women's crew team edges Pitt

Photo courtesy of Steve Kish

The women's crew squad prevailed in the Murphy Cup on Saturday.

By Jennifer Ciotta

This past Saturday, the Bucknell men and women's crews competed in the Murphy Cup in Philadelphia, Pa., and the women's varsity four beat out its rival Pitt for the gold by 3.8 seconds. This marks the third time this year that the Bison have edged Pitt for the gold.

This Murphy Cup winning boat consisted of captain Annie Calcagni '00, Kelly Wanger '00, Elizabeth Barrows '00, Julie Engel '03 and coxswain Linda Voll '03.

The women's varsity pair of captain Sarah Diegnan '00 and Keri Heuberger '02 did not have a women's race. So they raced against the mens' pairs and managed to beat out one men's boat. They are undefeated in women's pair races.

"In general, these last four years of training hard have paid off this season," Calcagni said.

Due to an injured rower, the varsity men's lightweight eight rowed a four. The Bison competed in the men's heavyweight event and finished fifth out of six boats. Comprised of Scott Ortland '01, Jeff Jockel '01,

Jeremy Urban '02, Brent Timberlake '02 and coxswain Sara Pryor '02, they only finished five seconds out of third place.

The novice men's A and B boats finished third and fifth, respectively.

The men also rowed the previous day against Lehigh and Lafayette. The men's varsity lightweight eight beat out Lafayette by open water and lost to Lehigh by only three seconds.

"Racing against the heavyweights was definitely a promising performance for future races," captain Scott Uebele '00 said. "It gave us the confidence to row with lightweight and heavyweight crews alike."

The novice men's A and B boats both beat Lehigh by open water.

Both the men and women's teams look forward to racing in the Patriot League Championships in Massachusetts this weekend.

IM corner

Softball

Division A

1. Lambda Chi	5-0
2. SAE A	3-2
3. Sig Ep	3-2
4. KDR	2-2
5. FIJI	0-2
6. Phi Psi	0-3

Division B

1. Theta Chi	4-1
2. Barker's Boys	4-1
2. We Got Rice	2-2
2. YoHoDicks	2-1
5. New Castle Mateens	0-3
6. SAE B	0-4

Co-Rec

1. French Ticklers	5-1
2. Team Swank	4-2
3. Team Proper	2-4
4. Vedder 1-East	0-4

Field Hockey

1. Team 2	2-0
2. Team 1	1-1
2. Team 3	0-2

Women's Soccer

1. Team Steen	2-1-1
2. Team Rives	2-1-0
3. Team Bucher	0-2-1

Women's Lacrosse

1. Team B	4-0
2. Team A	1-2
3. Team C	0-3

Also for softball, the championship games for division B and co-rec are Thursday. For Division B it is Theta Chi vs. Barker's Boys and for Co-Rec it is French Ticklers vs. Team Swank. For Division A there will be a four team playoff. Thursday it will be Lambda Chi vs. KDR and SAEA vs. Sig Ep. The championship will be on Sunday.

Thanks to everyone who participated in IM sports this year! It was a competitive and fun year. Remember to keep eyes and ears open for meeting dates and times in the fall of 2000.

Thanks also to those who make IM sports possible: Cindy Opalski, John Hangey, and Steph Morgan.

Keep up the good work and we'll see you in the fall.

Ian and Brad

Sports

It's time to say goodbye—please!

Commentary

Sports Editor:

Carmen Mauriello

This past year in sports proved to be an exciting one, with the Yankees grabbing their 25th World Series title of the century, the Rams and Colts emerging from the ranks of the also-rans to become elites and Ron Dayne breaking Ricky Williams' one-year old career rushing record.

But just as every year there are success stories in sports, every year there are not-so glorious moments as well. Look no further than Peter Warrick's infamous Dilliard's shopping spree, Marty McSorley's on-ice assault of Donald Brashear or John Rocker's abrasive comments toward the people of New York City. That's just to name a few.

Some of the same instigators keep re-appearing year after year, and I'd like to devote my final commentary of the year to recognizing the cancerous growths on today's pro sports, who we wish would disappear forever.

Baseball: John Rocker

Everyone wishes he'd disappear except for Atlanta Braves' fans, who last week greeted the return of the flame-throwing lefty with a rousing ovation. I guess they care more about bolstering their porous bullpen then they do about their moral values—but Braves' fans are a different breed, so that explains it.

The reason why I nominated Rocker for this dishonor is not only because he offended the vast majority of humanity and damaged the reputation of Major League Baseball with his dumb comments, it's that the guy is a flat-out jerk. Even with angry mobs calling for his execution, Rocker couldn't even say I'm sorry like a man.

He needed an hour to find a round-about way to sort of apologize, which included trying to portray himself as a victim of the oh-so traumatic spitting and mean language of New York fans. He deserved it, and he'll deserve what he's got coming when he returns to Shea Stadium for "battery day."

Even if he keeps his mouth shut to reporters in the future, Rocker will continue to be a nuisance to baseball just by the way he plays he game. He's cocky, obnoxious and unspirited. In the past, he hasn't hesitated to criticize teammates or management, and his showboating on the field also damages team morale.

No matter how many promises he makes, Rocker is Rocker. And the Rocker of old will continue to reappear and tarnish the image of the game.

Football: Jerry Jones

I think Jerry Jones' hair would look good if he styled the top of it to look like two horns, a la Al Pacino in *The Devil's Advocate*. That's the only man I can think of whose greed is comparable to the Dallas Cowboy's owner.

It's bad enough that Jones promptly gave the boot to one of the most revered and successful figures in sports, the late Tom Landry, upon arriving in Dallas over a decade ago, but he continues to sink to new lows. He's forced out three coaches since then—two who won Super Bowls for him.

Chan Gailey was the latest victim. Jones gave him a generous one year to prove his worth, canning Gailey despite him leading the injury-decimated squad to an 8-8 mark and a playoff appearance. It's not like Gailey had anything to do with the bad personnel moves, which Jones has a stranglehold on.

Claiming to be the modern, hands-on owner, Jones claims control over everything in the Big D besides the responsibility for the Cowboy's ineptitude. You can always find him meddling on the Dallas sidelines late in games, although he knows nothing about coaching. He went so far this past season to issue ultimatums to players and Gailey about shaping up or shipping out.

In contrast to an America built upon hard work, honesty and loyalty, Jones goes around waving his money and loves and leaves people according to his own selfish interests. If he was in the WWF, he'd undoubtedly have to borrow the music of the old Million Dollar Man—which goes "everyone has a price for the Million Dollar Man."

Jones' values conflict with those of our nation as well as what the NFL is trying to portray to its players, coaches and fans. It's not about the love of the game for Jones—it's money and fame—and that's why we'd be better off without him

Hockey: Marty McSorley

I thought I'd heard them all: man bites dog, public urination and Pee Wee Herman's movie theater incident. But then I heard "assault with a hockey stick." Yep, McSorley sure has really outdone himself.

Besides being an all-around tough guy and poor spirited player, McSorley somehow found a way to enhance his reputation as a cheap-shot artist when he gashed Donald Brashear in the head with his hockey stick. The violent blow caused Brashear to be wheeled off the ice with a concussion, while it earned McSorley a suspension for the remainder of the regular season and the playoffs.

And psychological tests are sure to follow, a la after Dennis Rodman's strategic boot of a reporter a few seasons back.

This definitely competes with Rocker's blunder for bonehead play of the year. But it wasn't just an isolated incident, McSorley's been doing it his entire career. Annually recognized as one of the most penalized players in the game, we'd definitely be better off if McSorley was banished for life (and so would NHL foes who want to live a healthy life after hockey).

Basketball: Dennis Rodman

I don't think this pick requires much justification. The supposedly "new and improved" Rodman signed with the Mavs this season, claiming that he was ready to focus on basketball and stop being a distraction.

Within a week on the job, the still multi-colored Worm could be found sitting on the free throw line while Sam Cassell tried to take a free throw, protesting a technical foul call. Guess what that earned him—the notorious and shameful Rodman march back to locker room, to the jeckling of opposing fans.

Yea, some things never change. But Rodman's ill-fated comebacks attempts should. The Mavs got sick of his act and cut him after a few weeks, just as the Lakers did last season.

But unfortunately, he'll be back as long as he's got a red hair on his head. And just as long as there's bottom of the barrel teams that need a publicity stunt, they'll be takers.

Men's lacrosse falls to PSU

By Michael Myers

The 18th ranked Bucknell men's lacrosse team suffered a tough 10-9 loss at Penn State last Wednesday. The Nittany Lions, ranked 27th in the nation, were able to overcome a one-goal deficit and hold off a Bison comeback to win the game.

The Bison rebounded in strong fashion with a 14-3 win over Holy Cross last Saturday, keeping their hopes of a Patriot League title alive.

The Bison jumped out to an early two-goal against Penn State lead thanks to a pair of goals by Michael Cheng '01. PSU bounced back to take a 4-2 lead at the end of the first quarter and a 7-3 halftime advantage.

"I think that the first quarter of the game was our worst quarter of the year," Keith Poisella '00 said.

The Orange and Blue mounted a furious comeback in the third quarter, outscoring Penn State 4-1, with Alex Gibson '00 notching the first two in the run. The fourth quarter was a real battle, with the Bison jumping out to 8-7 and 9-8 leads, only to have Penn State tie the game at 9-9.

With 8:01 left to play, PSU intercepted a pass in front of Bucknell's net and scored the game-winning goal.

Cheng continued his offensive rampage against Penn State, scoring four goals, including the Herd's first three of the game. Cheng has scored 15 goals in the team's last five games.

Gibson and Poisella each netted two goals, while Gibson added an assist. Jim Egan '00 rounded out the scoring for the Bison with a tally of his own.

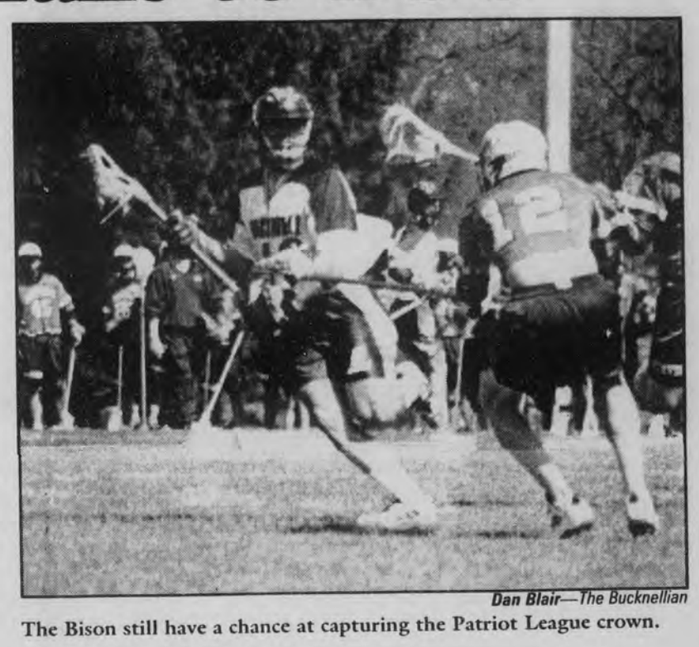
Justin Sussman '03 allowed seven Penn State goals in the first half, but finished the game strong with 14 saves, including a couple of highlight reel stops.

The loss dropped Bucknell's record to 6-4, and the Bison returned to their Patriot League schedule last Saturday by traveling to Worcester, Ma. to challenge Holy Cross. Bucknell dominated from the start and came away with a 14-3 victory.

"I was real pleased with the play of some of our younger players," head coach Sid Jamieson said. "We still have an opportunity to go to the NCAA [tournament] so we need to take care of business every time we play. Each game in the league is basically a tournament game."

The scoring in the Holy Cross rout was led by Gibson, who had two goals and an assist. Brad VanNostrand '00 and Justin Slama '03 also scored two goals apiece. Egan, Andrew Copelan '03, Mark Juelis '01, Rob Lane '03, Brian Treacher '01, Andrew Pacinelli '00, Ed Costello '00 and Dennis Geraghty '03 each notched a goal for the Bison.

Bucknell finishes out its season at home against Lehigh this Saturday at 1:00 pm. If Lehigh beats Hobart in an upcoming matchup and Bucknell defeats Lehigh Saturday, the Bison will win the Patriot League and go to the NCAA tournament. Even if Lehigh loses to Hobart, Bucknell could earn a share of the league crown by defeating Lehigh.



Dan Blair—The Bucknellian

The Bison still have a chance at capturing the Patriot League crown.

"I think that the season has gone well," Poisella said. "We hope Lehigh can beat Hobart and that we can go to the tourney for the first time in the school's history."

This will be the last game for 14 graduating seniors: Costello, Gibson, Pacinelli, Poisella, Van Nostrand, Steve Burman, Jim Egan, Brad Eyre, Gibson, Brian McNulty, Alex Rudis, Michael Sala, Andy Smith, Brad Thawley, and Stephen Ward.

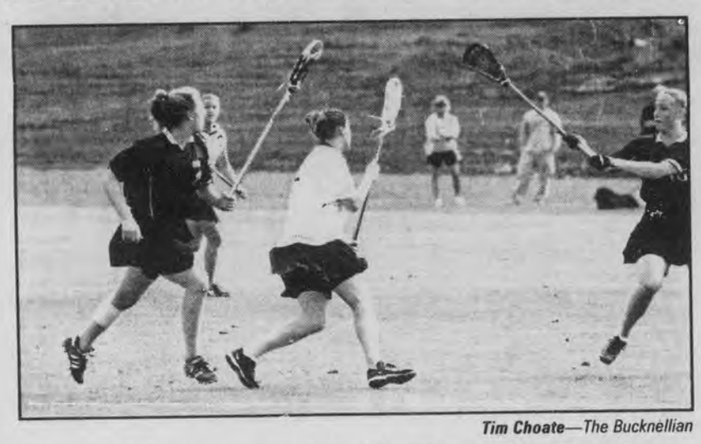
"This team has worked the hardest of any team I ever had," Jamieson said.

The Bison will be returning a solid nucleus next season, including Sussman, who received a lot of playing time in goal this season due to an injury to Smith.

Offensive powerhouse Cheng will also be returning next season for the Bison along with long-sticked defensive midfielder Mark Juelis '01. In addition, Bucknell will have a strong group of returning players at midfield and on attack.

"We aren't looking at any significant drop off next season," Jamieson said. "We are just going to reload and do it all again."

Bison suffer setback in loss to Colgate



Tim Choate—The Bucknellian

The women's lacrosse team will play Bloomsburg at home Saturday.

By Chuck Vicente

In a season full of ups and downs, the Bucknell women's lacrosse team followed it's season's pinnacle, a 12-3 triumph over Lehigh on April 15, with a tough 19-8 setback last Wednesday at the hands Patriot League rival Colgate.

The Colgate game was close in the first 10 minutes of play, as the Bison matched Colgate goal for goal to knot the score at three. However, Colgate managed to sneak away from the Bison by scoring six unanswered goals. The Bison did manage to notch two more before the end of the first half, but found themselves down 12-5.

In the second half, Colgate picked up where they felt off, scoring another seven goals. The Red Raiders shut down the Bison's offense, holding it scoreless until 23:25 into the second half. The Bison did net three more goals, but it was too little, too late.

The Bison's offense was led by Suzanne Raffaele '03, who tallied three goals, moving her season total to an team-leading 31. Melissa Montefusco '02 was able to find the back of the net two times while dishing out two assists. Captain Krista Gerhard '00, Kari Evans '01, and Robin Arnesen '02 were each able to notch a goal as well.

Bucknell's defense was lead by Nicole Kallis '03, who has started the last eight games in the cage for Bucknell. Kallis managed to save 13 of Colgate's shots.

Bucknell's biggest problem against Colgate seemed to be its lack of poise out on the field.

"We didn't play Colgate with the same confidence that we displayed against Lehigh," head coach Barb Jordan said. "We did some good things but just not enough to stay with them."

Bucknell's next scheduled game, last Saturday against American University, was canceled due to the weather, which gave the Bison time to rest and re-focus before they finish out their season with two more contests. This Friday the Bison face Bloomsburg at home. The Huskies have had a solid season, and they are always known for their aggressive play.

Then on Sunday, Bucknell faces Columbia in an away match to end its season. Columbia's coaching staff has done a solid job at rebuilding their program and should also prove to be a tough opponent.

"If we prepare well and play hard, I'm hoping that we'll take both," Jordan said

Although Bucknell's overall record is currently 5-6 (2-3 in the Patriot League), Jordan is very pleased with the season. "I think we have played more like a team this year, and very unselfishly. I am very pleased with their effort," Jordan said.

For every tough loss came a tough win. The biggest season accomplishment came from the effort put forth by the team as a whole. "Even though we had an up and down season, we were constantly working hard," Erin Curtis '02 said. "And we also had our fun."

The Bison will lose three graduating seniors next year: Gerhard, Maura Narog and Ashley Rust. All three not only brought talent to the field, but they also provided leadership. "Even as a junior, I look up to them tremendously," Ashley Evans '01 said. "They really brought the team together this year."

The Bison formed a solid team unity this year. Young players such as Raffaele and Kallis provide the team with a promising future. Veterans such as Ashley Evans, whose pin-point shooting is always a threat to opposing goalies, and Montefusco, who currently leads the team in assists with 16, will provide next year's leadership and experience.

The Bucknell women's lacrosse team has a positive view for the seasons to come, and its depth and youth give it justification for this outlook.

Consistency earns women's polo a playoff bid

By Brooke Rea

In it's second varsity season, BU women's water polo has established itself as one of the top ten teams on the East Coast. This weekend the team will travel to Princeton for the Eastern Championships, seeded ninth out of twelve teams.

The Bison fared well in the Allegheny Conference, handily winning the third place game against Penn State. Although third place did not give them an immediate bid to Easterns, Coach John Zeigler learned two days after the tournament that they had earned a wild card bid to the championship tournament.

"It was probably our strong victory over Penn State that showed the conference where we really stand," he said. "We have been consistently solid all season and people saw that."

With two weeks of targeted practice under their belts, the Bison aim to defeat their first two opponents, 5th seed Brown and 4th seed Villanova. The Bison have not faced Brown this season, but played Villanova in April at the ECAC tournament and lost by only three goals.

BU plans to use their low seed as an advantage, surprising teams who are ranked above them but may not be that much stronger. "We can beat some teams this weekend and come out in a higher place than we are now," Zeigler said. "But we are going to have to get prepared and play a couple of great games. It's not going to be easy."

Depending on how the Bison fare in the two Saturday games, they will play one or two more games over the course of the weekend and could end up playing for fifth, or even third place. The key this weekend will be BU's strong team defense, which has been improving all season, and a controlled offense.

One absence that will be felt is that of co-captain Emily McKnight '00, who found out earlier this week that she must take a teaching certification test this weekend for her career after college. She will join the team at Princeton on Saturday night.

"It will be hard this weekend without one of our seniors who has started every game this season," Paige Cull '01 said. "But with our solid bench, I am confident that there are at least four players who I know can step it up."

Allison Hernandez '01 will start in McKnight's place, and sophomores DeAnn Long, Dana Clarke, and Meredith Stevens will have plenty of playing time as well.

Bison Calendar

WOMEN'S LACROSSE

Fri., Apr. 28 BLOOMSBURG 7:00 p.m.

Sun., Apr. 30 vs. Columbia 2:00 p.m.
